CDE/ECE Faculty Initiative Project
California Preschool Learning Foundations, Volume 2

***Introduction to the Instructional Guide
for the
Physical Development Domain***

This instructional guide for the physical development domain is organized to support faculty in addressing the content and research base of the physical development foundations. Accordingly, the instructional guide for these foundations is designed to support faculty as they deepen students' understanding of the structure, content, and research base of the foundations. In the instructional guides, the word "students" refers to college students and not children in the preschool setting.

The guide is *not* intended to support faculty in helping students learn to **assess** children's learning and development related to the physical development foundations. It is also *not* intended to support faculty in helping students learn how to design **curriculum** related to children's development of physical development knowledge and skills. Curriculum development is addressed in the instructional guide for the *California Preschool Curriculum Framework, Volume 1*.

Instructional guides also have been developed for the *Preschool English Learners: Principles and Practices to Promote Language, Literacy, and Learning—A Resource Guide (Second Edition)* and the *California Preschool Learning Foundations, Volume 1*. All these instructional guides are available on the FIP Web site, <http://www.wested.org/facultyinitiative>.

The physical development domain of the *California Preschool Learning Foundations, Volume 2* (PLF, V2) consists of three strands, each with three substrands. They are:

Fundamental Movement Skills

- 1.0 Balance
- 2.0 Locomotor Skills
- 3.0 Manipulative Skills

Perceptual-Motor Skills and Movement Concepts

- 1.0 Body Awareness
- 2.0 Spatial Awareness
- 3.0 Directional Awareness

Active Physical Play

- 1.0 Active Participation
- 2.0 Cardiovascular Endurance
- 3.0 Muscular Strength, Muscular Endurance, and Flexibility

The learning experiences in this instructional guide allow faculty to address all the strands in an integrated approach or to focus on individual strands.

Features of the Instructional Guide for the *California Preschool Learning Foundations, Volume 2*

Student Learning Outcomes

To support faculty in decisions regarding how and where they can best use the *California Preschool Learning Foundations, Volume 2* in their course work or across their program, the Student Learning Outcomes (SLOs) developed by the Curriculum Alignment Project (CAP) (http://www.childdevelopment.org/cs/cdtc/print/htdocs/services_cap.htm) for the eight core lower division early childhood courses have been mapped onto each learning experience in this instructional guide for consideration. At the beginning of each learning experience the Preview of the Learning Experience will provide the list of courses that have been mapped onto the specific learning experience.

The Curriculum Alignment Project's SLOs, objectives, and examples of course content and topics indicated for this instructional guide for the *California Preschool Learning Foundations, Volume 2* can be found in Appendix A of this instructional guide. Refer to Appendix A of this instructional guide for detailed and specific student learning outcomes, objectives, and examples of course content and topics. Refer to the Student Learning Outcomes Index for an overview of this instructional guide mapping listed by domain. The location of the SLO Index is listed in the Table of Contents for this instructional guide.

These SLOs are organized by the CAP core lower division early childhood courses. This is not an exhaustive list, and faculty might find ways to use the learning experiences to address SLOs in ways other than what has been indexed. Working through these selected learning experiences does not guarantee the achievement of any student learning outcome or objective; it is understood that students achieve student outcomes through repeated engagement with information and experiences that build competence.

To assist faculty in using these SLOs as supports for decision making, the instructional guide learning experiences are indexed first by *California Preschool Learning Foundations, Volume 2* domains then by CAP courses and SLOs so that

California State University and University of California

The Curriculum Alignment Project (CAP) course and student learning outcome (SLO) mapping with this instructional guide is done with the understanding that not all institutions will use these particular SLOs or objectives. This is particularly true for faculty at the California State University (CSU) and University of California (UC) campuses. The SLOs do provide learning outcomes that can be used selectively or with adaptations for courses at the CSU and UC campuses and indicate what can be accomplished by students through using the learning experiences in this instructional guide.

faculty can select what is most relevant to their particular needs. Student learning outcomes are matched to specific learning experiences in the instructional guide that will support attainment of that outcome. Not all student learning outcomes map onto the specific content of the instructional guide.

Refer to the Student Learning Outcomes Index for an overview of this instructional guide mapping listed by domain. Refer to Appendix A of this instructional guide for more detailed and specific student learning outcomes, objectives, and examples of course content and topics.

Instructional Methodologies

Each learning experience is written to include a variety of instructional methodologies. This is intended to provide varied learning experiences for students as they encounter the foundations. It also provides another variable for faculty to use in deciding which learning experiences will best suit the needs of their students and programs. In this instructional guide, for the first time, these methodologies are identified for each learning experience, and are indexed so that faculty can get an overview of which methodologies are used across all the learning experiences. The location of the Instructional Methodologies Index is listed in the Table of Contents for this instructional guide.

California Early Childhood Educator Competency Areas

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Early Childhood Educator Competencies. In this instructional guide, competency areas are listed for each learning experience that could be addressed in the learning experience. This list can be found at the beginning of each learning experience on the page(s) labeled Preview of Learning Experience 1 and so forth. These are preliminary connections and are not meant to be exhaustive. Faculty will find more connections in their courses to both competency areas and competency contexts as they become more familiar with them. They are listed in this instructional guide as an initial exploration of how particular competency areas might be addressed through these learning experiences. There is no index for them in this instructional guide due to the preliminary nature of the mapping.

Learning Experiences and Instructional Themes

The instructional guide is composed of 39 learning experiences that can be used to support students in learning about the foundations in the *California Preschool Learning Foundations, Volume 2*. They are presented by domain and each learning experience is designed to address one of six instructional themes:

- helping students connect to their own experiences with the domain
- learning the content of the domain foundations
- understanding the rationale and research base of the domain
- connecting the domain to children's families and cultural communities
- exploring the foundations in the early care and education setting
- connecting the foundations across domains

These themes are not explicitly identified within each learning experience. Because of the holistic nature of development for children and for students, many of the learning experiences cross themes. Nevertheless, to support faculty decision-making, the dominant theme for each learning experience is identified in the Organizational Chart for the Instructional Guide for the *California Preschool Learning Foundations, Volume 2*.

Structure of the Learning Experiences in the *Instructional Guide for the California Preschool Learning Foundations, Volume 2*

Each learning experience is introduced with a preview page(s) containing information that will help faculty get an overview of that learning experience. Each of these Preview of Learning Experience page(s) contains:

- a focus statement that describes what students will experience in the learning experience
- a list of the Curriculum Alignment Project (CAP) courses for which CAP student learning outcomes have been mapped onto the learning experience
- a list of the instructional methodologies used in the learning experience
- a list of possible California Early Childhood Educator Competency Areas to consider that could be addressed in this learning experience.

Before You Start: Information For Preparation

Following the Preview of Learning Experience page(s), each learning experience begins with a section titled *Before You Start*. This section can be found on the first page of every learning experience following the preview page(s) and provides an overview to help faculty decide if this learning experience fits into their purpose and goals for a class session. In this section there might also be prior readings, background information, connections to other CDD publications, or logistical details to consider before engaging with students.

Instructional Components

Information Delivery

This component is designed to introduce specific content to students in the class setting. The delivery of information may be brief or long and may be composed of a single topic or several related topics. *Information Delivery* might include these elements:

- Lecture content
- Readings or video
- Direct engagement with content in an active way

Active Learning

This component describes learning sessions that can be conducted within the time frame of a single class or over several class sessions by individuals, pairs, small groups, or the whole class. These learning sessions are intended to be active,

thoughtful, challenging, and relevant to the content. Active learning is further divided into:

- *Getting it started.*
- *Keeping it going*
- *Taking it further*
- *Another approach/way*

Not every learning experience contains all of these segments of active learning. They are included when they are relevant and enhance learning or instructional possibilities.

Reflection

Questions for reflection are offered that will challenge students to reflect on their experiences with the content and process of the learning experience. These questions usually ask students to reflect on their experiences and then come to some action or make a decision based on those reflections. This is intended to establish habits of reflection in students that can be carried over to their work with colleagues and young children and families.

Deeper Understanding

Topics for additional study or research by students are included at the end of some learning experiences. Again, these are included as they are relevant and will enhance or extend learning. They are intended to take students into deeper engagement with the concepts, issues, and/or research base that are related to the content of the domain.

Online Options

Suggestions are made for ways to implement or adapt active learning to student work that is done online. This might be in online courses or as online assignments for face-to-face courses. These are not meant to be exhaustive but to indicate the kinds of adaptations that can be made to support faculty and students who work online.

PowerPoint Presentations

Slide 3

Throughout the instructional guide, you will sometimes see this symbol in the left margin of the instructional components. This symbol indicates that there are PowerPoint slides that correspond to a particular part of the learning experience.

Additional Thoughts

The learning experiences in this guide are written to be adapted and, therefore, are not intended to be used as scripts. Each learning experience provides a framework within which faculty will need to plan and reflect on what will work best with their particular students.

CDE has published a resource guide titled *Preschool English Learners: Principles and Practices to Promote Language, Literacy, and Learning—A Resource Guide (Second Edition)*. This guide provides foundational information regarding language and literacy development in all children, with special attention to English-language development in children for whom English is not their home language. Many faculty have found this publication to be helpful in supporting their own students who are learning about the

foundations and the language of early care and education. The Faculty Initiative Project has produced an instructional guide for this publication, the *Instructional Guide for the Preschool English Learners: Principles and Practices to Promote Language, Literacy, and Learning—A Resource Guide (Second Edition)*, which is available online at www.wested.org/facultyinitiative/pelguide.html.

Student Learning Outcomes Index

Student Learning Outcomes and CAP Lower Division Eight Courses Mapped onto the *Instructional Guide for the California Preschool Learning Foundations, Volume 2*

To support faculty in decisions regarding how and where they can best use the *California Preschool Learning Foundations, Volume 2* (PLF, V2) in their course work or across their program, the Student Learning Outcomes (SLOs) developed by the Curriculum Alignment Project (CAP)

(http://www.childdevelopment.org/cs/cdtc/print/htdocs/services_cap.htm) for the eight core lower division early childhood courses have been mapped onto each instructional guide learning experience for consideration.

This SLO Index is an overview of the instructional guide mapping listed by domain. Appendix A includes the Curriculum Alignment Project's SLOs, objectives, and examples of course content and topics indicated for this instructional guide for the PLF, V2. These SLOs are organized by the CAP core lower division early childhood courses.

This is not an exhaustive list, and faculty might find ways to use the learning experiences to address SLOs in ways other than what has been indexed. Working through these selected learning experiences does not guarantee the achievement of any student learning outcome or objective; it is understood that students achieve student outcomes through repeated engagement with information and experiences that build competence.

To locate page numbers for each learning experience listed in the following index, refer to the instructional guide Table of Contents or the Table of Contents for each specific domain: Visual and Performing Arts, Physical Development, and Health.

California State University and University of California

The Curriculum Alignment Project (CAP) course and student learning outcome (SLO) mapping with this instructional guide is done with the understanding that not all institutions will use these particular SLOs or objectives. This is particularly true for faculty at the California State University (CSU) and University of California (UC) campuses. The SLOs do provide learning outcomes that can be used selectively or with adaptations for courses at the CSU and UC campuses and indicate what can be accomplished by students through using the learning experiences in this instructional guide.

Physical Development: Connecting to the Foundations in the Physical Development Domain by Experiencing Them

Focus Statement

Students demonstrate adaptations of the foundations in the physical development domain and discuss their experiences in doing them.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Practicum-Field Experience

Instructional Methodologies

- Demonstration
- Pairs work
- Reflective discussion—large group

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how particular competency areas might be addressed through these learning experiences.

- Child Development and Learning

Physical Development Domain:
Connecting to the Foundations in the Physical Development Domain
by Experiencing Them

- Culture, Diversity, and Equity
- Family and Community Engagement
- Dual-Language Development
- Special Needs and Inclusion
- Health, Safety, and Nutrition

Physical Development:

Connecting to the Foundations in the Physical Development Domain by Experiencing Them

Before You Start

Students will be asked to think about their own skills in relation to the foundations in the physical development domain and what it might feel like to stretch their skills to further levels of development.

To facilitate this learning experience, provide a cleared space for students to work in pairs while physically exploring these foundations. Some of these foundations include balancing, skipping, and hopping. Because classes tend to be made up of many ages and backgrounds, plan these activities based on the capabilities of your students. Safety should be the first priority. If needed, student partners can help each other get from standing to sitting on the floor or sitting to standing. Note the suggested sequences listed on Handout 1, accompanying this learning experience.

Or, as suggested in “Another approach/way,” you could more closely supervise the students and make appropriate matches between students and activities by choosing to have individual pairs demonstrate specific activities.

Some faculty might find it helpful to review the foundations in the physical development domain with students before doing this learning experience. Others might consider using this experience as an introduction to this domain before students are familiar with the foundations. In either case, the foundations are summarized in the appendix to the *California Preschool Learning Foundations, Volume 2* (PLF, V2) publication on page 108.

Handout 1 is provided with this learning experience to guide students through these skills. An electronic version of the handout will be available when this instructional guide is online at www.wested.org/facultyinitiative.

Materials needed for this learning experience are tape (such as masking tape) to put on the floor, beads and string, a few balls, scissors, paper, and pens/markers.

Information Delivery

Let students know that they will be looking at their own development related to the foundations in the physical development domain. Point out that for adults, most of these skills have become automatic, but in young children, they are still developing. Students will find some physical activities easy and some challenging, and that is to be expected in any group of adults.

Point out that the foundations have been developed for two age groups, but students will be focusing on what we would expect

to see in children at 60 months of age as the students look at their own skills in this learning experience.

Active Learning

Slide 2

Getting it started

Distribute the handout to students, and briefly review the columns and rows. Divide students into pairs, and make sure they have the space to work through trying out the foundations as directed in the handout.

This will work best if you actively lead going through each of the suggested activities individually. Of course, you can do as many or as few as you think advisable for your students. Be sure students know they can rely on their partners to assist them if they need any support with these physical activities. Also be sure students understand that they are only to try these activities at their own level of comfort.

Online Options

Students could try these activities at home and record their experiences for group or online discussion.

As you go through these activities, give students time after each one to write notes about what this experience was like for them.

Putting it together

Reconvene as a group and lead a group discussion focused on the following questions:

- What was your overall impression of this experience?
- What things were hardest? Easiest?
- Were there any surprises?
- What did you learn about your relationship to these foundations? For example, how much of the foundations can you demonstrate or model for young children?
- What has this experience suggested about your work with young children relating to the physical development domain?

Online Options

Discussion questions could be submitted in written form for review.

Slide 3

Another approach/way

Instead of having all students try out the activities, you could have different pairs demonstrate individual foundations. Then after each demonstration, review the experience with relevant questions selected from the “Putting it together” segment above.

Reflection

The questions in “Putting it together” will provide opportunities for reflection regarding students’ connections to these

foundations.

Handout: Connecting to the Physical Development Foundations By Experiencing Them

Try some or all of the following skills. Do this only with a partner to assist and take turns. Try only what you want to do or know you can do safely.

As you do the skills, discuss the experience with your partner. Note what was easy or challenging or any other reflections about your experience.

| Skill | Notes: Was it easy or were there challenges? Other? |
|---------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| Strand: Fundamental Movement Skills | |
| Substrand: <i>Balance</i> | |
| Stand on one foot for five seconds (holding your partner's hand for support as needed). | |
| Put a five-foot length of tape on the floor for and walk on it (holding your partner's hand for support as needed). | |
| Substrand: <i>Locomotor Skills</i> | |
| Walk and stop when your partner says "stop" and go when your partner says "go." Repeat several times. | |
| Put a book on the floor and do a two-footed jump (holding your partner's hand for support as needed.) | |
| Try galloping, sliding, hopping, and leaping for short distances (only if it is safe for you to do so). | |
| Substrand: <i>Manipulative Skills</i> | |
| Bounce a ball and catch it with two hands. | |
| Draw specific shapes, such as circles, squares, and triangles. | |

Physical Development Domain: Connecting to the Foundations in the Physical Development Domain: By Experiencing Them
Handout 1 – Handout: Connecting to the Physical Development Foundations by Experiencing Them

| Skill | Notes: Was it easy or were there challenges? Other? |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| Strand: Perceptual-Motor Skills and Movement Concepts | |
| Substrand: <i>Body Awareness</i> | |
| Point to and name 12 body parts | |
| Substrand: <i>Spatial Awareness</i> | |
| Follow your partner's directions to place a book over/under, in front of/behind, next to, or near/ far from a chair or table | |
| Substrand: <i>Directional Awareness</i> | |
| Recite "Hokey Pokey" and put your left arm in, right arm out, left foot in, and right foot out. | |
| String some beads or cut some shapes. | |
| Strand: Active Physical Play | |
| Substrand: <i>Active Participation</i> | |
| Talk with your partner about an activity that you participate in, such as walking, yoga, dancing, or biking. If you do not have a practice of active physical activity, talk about one you have done in the past or would like to do in the future. | |
| Substrand: <i>Cardiovascular Endurance</i> | |
| Talk with your partner about something you did that required moderate or vigorous activity, either recently or something you remember from when you were a child. | |
| Substrand: <i>Muscular Strength, Muscular Endurance, and Flexibility</i> | |
| Try some bending or easy twisting at the waist and some stretching or big movements with your arms. | |

Physical Development: Connecting to Our Experiences with Physical Activity in Natural Settings

Focus Statement

Students reflect on their own connections to natural settings and discuss the importance of these settings for young children.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Child, Family and Community
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Health, Safety and Nutrition
- Teaching in a Diverse Society
- Practicum-Field Experience

Instructional Methodologies

- Creation of a visual representation
- Pairs work
- Reflection—individual or large group
- Reflective discussion—large group

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how

Physical Development Domain:
Connecting to Our Experiences with Physical Activity in Natural
Settings

particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Culture, Diversity, and Equity
- Family and Community Engagement
- Dual-Language Development
- Learning Environments and Curriculum
- Health, Safety, and Nutrition

Physical Development:

Connecting to Our Experiences with Physical Activity in Natural Settings

Before You Start

The introduction to the physical development domain of the *California Preschool Learning Foundations, Volume 2* (PLF, V2) contains a section entitled “Active Physical Play in The Natural World.” This is a discussion of the importance of contact with natural settings and the impact on development. (PLF, V2, p. 38). There are some references cited in this section that would be helpful to read before implementing this learning experience.

Depending on how you choose to do this learning experience, you will need paper for drawing, markers, crayons, colored pencils, brushes and paints, magazines for collage, glue, and any other preferred materials.

Information Delivery

Ask students to read the section “Active Physical Play in The Natural Word” in the introduction to the physical development domain of the *California Preschool Learning Foundations, Volume 2* (p. 38). This can be done before coming to class or during an assigned time in class.

Ask students to work individually or in pairs to pick out one or two key points. Have them share their key points with the whole group. These should be charted so that they can be seen during the rest of the experience.

Active Learning

Getting it started

Ask students to think for a moment about their early experiences in natural settings. This could be neighborhood parks, other small or large parks, beaches, forests, campgrounds, gardens, walking paths, or even a yard near a home with grass, trees, and plants. Ask them to quickly write down several of these experiences or places.

Online Options

Students could list their experiences online or post photographs of their visual representations.

If some students live in highly urbanized environments or can't remember early experiences in natural settings, ask if they have a favorite natural place or one they would like to visit.

Some students who live in rural or remote areas might have trouble distinguishing a particular place, since that is what

surrounds their daily lives. In this case, you might also ask for a favorite place or one that is particularly important to them.

Keeping it going

Next, ask students to choose one of these experiences or places and draw it, paint it, or make a collage that represents it. You might have a student who would like to write a poem about it or use a list of words to describe it. Some students might want to use words and images together in some way. The main point is to produce some kind of representation that can then be discussed with others. Give students 20 or 30 minutes to do this, depending on their level of engagement.

Putting it together

Gather the students in a large group, and ask them to look around at what they and others have created. Emphasize that what is important is not how skilled anyone has been with their creation, but notice the variety and how we connect to natural settings in different ways. Encourage students to ask each other about their experiences and discuss their work.

The following discussion questions help students understand the importance of activity in natural settings to lifelong development.

Slides 2-3

Online Options

Students could have an online discussion based on the questions in “Putting it together” and “Reflection” or write individual reflection papers based on these questions.

- Was it hard to remember your early experiences in natural settings or to think of places you would like to visit or places that are important to you?
- How did it feel when you remembered them?
- What kind of feelings did these places bring up?
- Did you think of these experiences or places with happiness? Fear? Excitement? Contentment? Wonder?
- Did they bring up memories or ideas about other people?
- What does this suggest about the importance of exposing children to natural areas when working with young children?

Reflection

Slide 4

The questions in “Putting it together” are designed to support reflection regarding students’ connections to natural settings but could be augmented by asking these additional questions:

- What new insights did you gain in this experience?
- What really stood out for you in this experience?

- Did this experience suggest anything you want to do in relation to your experiences with natural settings or the experiences of children in your work?

Physical Development: Piecing Together the Physical Development Domain Content Puzzle

Focus Statement

Students become familiar with the content and structure of the physical development foundations as they assemble the strands, substrands, and foundations of the domain.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Practicum-Field Experience

Instructional Methodologies

- Categorizing
- Class discussion
- Pairs or small group work
- Problem solving
- Reflection—individual or large group

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how

Physical Development Domain:
Piecing Together the Physical Development Domain Content Puzzle

particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Observation, Screening, Assessment, and Documentation

Physical Development: Piecing Together the Physical Development Domain Content Puzzle

Before You Start

In this learning experience, students familiarize themselves with the content of the physical development domain. In addition to acquainting students with the specific content of this domain, it can serve as an introduction to the organizational structure of all the preschool learning foundations domains because their structures are very similar.

Students will be assembling puzzles of the domain elements, and Handout 2 is included if you wish to use it. The pieces may be cut and packaged in an envelope prior to the class session. An electronic version of the handout will be available when this instructional guide is available online at www.wested.org/facultyinitiative. You could also make your own puzzle pieces by making a large card for each strand, a paper strip for each of the substrands (including the wording “*At around 48 months of age*” and “*At around 60 months of age*” on a line below the substrand name), and strips for each of the foundations. The number of sets will depend on how you choose to group the students—individually, in pairs, or in small groups.

It will also be helpful to have several copies of the *California Preschool Learning Foundations, Volume 2* available for students to check their work. A copy of the strands, substrands, and foundations for this domain is included as Handout 1 of this learning experience. It can also be found in Appendix C of this instructional guide. An electronic version of the handout will be available when this instructional guide is online at www.wested.org/facultyinitiative.

Information Delivery

The physical development domain has three strands: Fundamental Movement Skills, Perceptual-Motor Skills and Movement Concepts, and Active Physical Play. Each strand has three substrands; a listing can be found on page 45 of the *California Preschool Learning Foundations, Volume 2* (PLF, V2) and is provided here for quick reference:

Slides 2-4

Fundamental Movement Skills (Strand)

1.0 Balance (Substrand)

2.0 Locomotor Skills (Substrand)

3.0 Manipulative Skills (Substrand)

If you do not have students read the material on pages 58–60 of the <i>California Preschool Learning Foundations, Volume 2</i> (PLF, V2) prior to class, ask them to do so and note any terms that may be new to them.</p> <p> Slide 5</p> <p>Then discuss the age designations (that is, “<i>At around 48 months of age</i>” and “<i>At around 60 months of age</i>”) and how the foundations focus on knowledge and skills that most children can have acquired by the end of their first or second year in a high-quality preschool. Review some of the examples under a few foundations for each age grouping so that students develop a sense of the progression of knowledge and skill acquisition. Make sure students understand “that the foundations are age-related and not age dependent” (PLF, V2, p. 45).</p> <p>Keeping it going Distribute the puzzle sets to the students and explain that they are to assemble them by first identifying the three strands and then placing the appropriate substrands and foundations under each strand.</p> <p>Having students work in pairs or small groups promotes discussion of the content as students determine where each</p> |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

foundation goes. Encourage them to discuss their choices and be ready to explain them to others.

Putting it together

Have students compare their completed puzzles with the actual organization of the foundations in the *California Preschool Learning Foundations, Volume 2*. Ask them to note where their puzzles differed from the actual foundations and why they think the foundations are ordered the way they are.

Taking it further

Ask students to discuss which foundations they believe are the most important for teachers to know about and where there is the most need for teachers to support children's development.

Students then are to rearrange the foundation puzzle pieces to reflect these priorities and be able to explain why.

Online Options

Instead of putting together puzzles of the strands, substrands, and foundations, students could first review Handout 1 of the domain foundations and then prioritize the foundations as described in the "Taking it further" section. Students would then post their lists online for discussion.

Another approach/way

Depending on the number of students and the time allotted for this learning experience, you may choose to assign a strand to a group of students rather than give all three strands to all groups. Students would then share their completed puzzles with the whole class.

Reflection

Slide 6

After the students have reviewed and compared their puzzles, ask them to respond to the following questions:

- As you look at the completed puzzles, what stands out to you?
- Were some strands and substrands easier to put together than others? Which ones and why?
- Which strand and substrands were most challenging? Why?
- What are some examples you have seen of any of these foundations?
- Which substrand do you want to know more about? How could you discover more about that substrand?

Physical Development

Fundamental Movement Skills

1.0 Balance

| At around 48 months of age | At around 60 months of age |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| 1.1 Maintain balance while holding still; sometimes may need assistance. | 1.1 Show increasing balance and control when holding still. |
| 1.2 Maintain balance while in motion when moving from one position to another or when changing directions, though balance may not be completely stable. | 1.2 Show increasing balance control while moving in different directions and when transitioning from one movement or position to another. |

2.0 Locomotor Skills

| | |
|--------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.1 Walk with balance, not always stable, oppositional arm movements still developing, and relatively wide base of support (space between feet). | 2.1 Walk with balance, oppositional arm movements, and relatively narrow base of support (space between feet). |
| 2.2 Run with short stride length and feet off the ground for a short period of time. May show inconsistent opposition of arms and legs. | 2.2 Run with a longer stride length and each foot off the ground for a greater length of time. Opposition of arms and legs is more consistent. |
| 2.3 Jump for height (up or down) and for distance with beginning competence. | 2.3 Jump for height (up or down) and for distance with increasing competence. Uses arm swing to aid forward jump. |
| 2.4 Begin to demonstrate a variety of locomotor skills, such as galloping, sliding, hopping, and leaping. | 2.4 Demonstrate increasing ability and body coordination in a variety of locomotor skills, such as galloping, sliding, hopping, and leaping. |

Physical Development Domain: Piecing Together the Physical Development
Domain Content Puzzle
Handout 1 – Physical Development Foundations

3.0 Manipulative Skills

| At around 48 months of age | At around 60 months of age |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.1 Begin to show gross motor manipulative skills by using arms, hands, and feet, such as rolling a ball underhand, tossing underhand, bouncing, catching, striking, throwing overhand, and kicking. | 3.1 Show gross motor manipulative skills by using arms, hands, and feet with increased coordination, such as rolling a ball underhand, tossing underhand, bouncing, catching, striking, throwing overhand, and kicking. |
| 3.2 Begin to show fine motor manipulative skills using hands and arms such as in-hand manipulation, writing, cutting, and dressing. | 3.2 Show increasing fine motor manipulative skills using hands and arms such as in-hand manipulation, writing, cutting, and dressing. |

Perceptual-Motor Skills and Movement Concepts

1.0 Body Awareness

| At around 48 months of age | At around 60 months of age |
|-------------------------------------------------------|------------------------------------------------------------------|
| 1.1 Demonstrate knowledge of the names of body parts. | 1.1 Demonstrate knowledge of an increasing number of body parts. |

2.0 Spatial Awareness

| | |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 2.1 Use own body as reference point when locating or relating to other people or objects in space. | 2.1 Use own body, general space, and other people's space when locating or relating to other people or objects in space. |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|

3.0 Directional Awareness

| | |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 3.1 Distinguish movements that are up and down and to the side of the body (for example, understands "use that side, now the other side"). | 3.1 Begin to understand and distinguish between the sides of the body. |
| 3.2 Move forward and backward or up and down easily. | 3.2 Can change directions quickly and accurately. |

Copyright © 2010 California Department of Education, Child Development Division

3.0 Directional Awareness (Continued)

| At around 48 months of age | At around 60 months of age |
|--------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| 3.3 Can place an object on top of or under something with some accuracy. | 3.3 Can place an object or own body in front of, to the side, or behind something else with greater accuracy. |
| 3.4 Use any two body parts together. | 3.4 Demonstrate more precision and efficiency during two-handed fine motor activities. |

Active Physical Play

1.0 Active Participation

| At around 48 months of age | At around 60 months of age |
|----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| 1.1 Initiate or engage in simple physical activities for a short to moderate period of time. | 1.1 Initiate more complex physical activities for a sustained period of time. |

2.0 Cardiovascular Endurance

| | |
|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 2.1 Engage in frequent bursts of active play that involves the heart, the lungs, and the vascular system. | 2.1 Engage in sustained active play of increasing intensity that involves the heart, the lungs, and the vascular system. |
|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|

3.0 Muscular Strength, Muscular Endurance, and Flexibility

| | |
|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 3.1 Engage in active play activities that enhance leg and arm strength, muscular endurance, and flexibility. | 3.1 Engage in increasing amounts of active play activities that enhance leg and arm strength, muscular endurance, and flexibility. |
|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|

Physical Development: Demonstrating the Content of the Physical Development Domain

Focus Statement

Students develop an understanding of the skills and concepts described in the physical development foundations by demonstrating the skills or concepts in a game of charades.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Practicum-Field Experience

Instructional Methodologies

- Game – charades
- Reflective discussion—large group
- Small group work

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how particular competency areas might be addressed through these learning experiences.

Physical Development Domain:
Demonstrating the Content of the Physical Development Domain

- Child Development and Learning
- Observation, Screening, Assessment, and Documentation
- Special Needs and Inclusion

Physical Development: Demonstrating the Content of the Physical Development Domain

Before You Start

"Preschool children are developmentally primed and highly motivated to learn and become proficient in new movement skills (Sanders 2002). . . . The goal for preschool children is to develop reasonable proficiency, not expertise, in a wide variety of movement activities" (*California Preschool Learning Foundations, Volume 2*, p. 38). The foundations in the physical development domain describe these fundamental movement and perceptual-motor skills and movement concepts that children can build on and use throughout their lives.

Because the preschool period is an optimal time for children to learn these skills and concepts, it is important for students to have a clear understanding of what these skills and concepts are and look like. Although students may be familiar with the neurological development of movement skills (see page 41 of the *California Preschool Learning Foundations, Volume 2* for a brief discussion), many students may not be as aware of the vocabulary and components of fundamental movement skills (such as balance, locomotor skills, and manipulative skills) and perceptual-motor skills and movement concepts (such as body awareness, spatial awareness, directional awareness, and temporal awareness or rhythmic skills) as described in the foundations.

This learning experience provides an opportunity for students to physically demonstrate an understanding of these skills and concepts through a modified game of charades. Handout 1, following this learning experience, has each of the foundations listed and can be cut ahead of time and used for the charade cards. An electronic version of the handout will be available when this instructional guide is online at www.wested.org/facultyinitiative.

As with the learning experience "Connecting to the Foundations in the Physical Development Domain by Experiencing Them," you will need space for students to work in teams and act out the skills and concepts. Also, remind students that safety is a priority, so they should attempt only movements that they feel comfortable and safe in doing. Because the students will be working in teams, encourage them to assist each other as needed (such as providing support for balancing movements).

Information Delivery

Have the students review the foundations either at the beginning of the session or prior to class. Make sure they note the

Physical Development Domain:
Demonstrating the Content of the Physical Development Domain

differences in each foundation for children at around 48 months of age and at around 60 months of age.

Active Learning

Getting it started

Review the foundations with the class, asking students to note any new or unfamiliar vocabulary or concepts. Ask students to look at some of the examples and ask for additional ones.

If you have done the learning experience “Exploring the Content of the Physical Development Domain Through Vocabulary” in this instructional guide, you can have students refer to the vocabulary lists they developed.

Keeping it going

Depending on the size of your class, ask students to form teams of two to four. Explain that the class is going to play “Physical Development Charades” and explain the directions and rules for the game.

Directions

- Each card has a summary of one the foundations written on it.
- A team draws a card from the stack and has one minute to decide how to act it out as a charade.

For the purposes of the charades activity, the foundations used are from “At around 60 months of age.” Another option is to create charade cards with foundations from “At around 48 months of age.”

- The team demonstrates the foundation to the other teams who then try to identify the foundation.
- The team that correctly identifies the foundation gets a point.
- Teams take turn drawing cards and acting out the foundations until all the cards have been drawn.

Rules

- Keep safety in mind when acting out the foundation.
- Students are to do only actions that they feel comfortable and safe in doing.

- Player cannot make any sounds when acting out the foundation.
- Objects can be used.
- More than one team member can demonstrate the foundation. Students are encouraged to assist each other as needed.
- Decide if there should be a time limit. If no one identifies the foundation within the time limit, the team demonstrating the foundation gets a point.
- Decide on any signals (such as actions similar to hand motions used in charades to indicate a book, movie, or quotation) that can be used either initially or if the guessing teams get stuck. For example, a different signal could be used for each strand and/or substrand.

Because the wording for the foundations is specific and may still be new to students, you may choose to provide all the teams with a handout of the charade cards that has not been cut up. The teams can refer to the handout when making their guesses.

Putting it together

Ask the teams to then post their foundations cards on a piece of chart paper or whiteboard that has the strands and substrands labeled. Have the whole class review the completed chart and come to agreement on the placement of all the foundations. Ask students to refer to the physical development foundations on pages 46–57 of the *California Preschool Learning Foundations, Volume 2* as needed.

Another approach/way

Have the teams take turns drawing cards until all the cards have been drawn before any pantomiming is done. Give the teams 10–15 minutes to prepare how they will demonstrate each of their cards.

Then ask teams to take turns demonstrating one foundation while the others guess.

Reflection

Slide 2

Ask the class to reflect on this learning experience by responding to the following questions:

- What stands out for you from playing “Physical Development Charades”?

- Which foundations did you find easiest to demonstrate? Which were the most difficult?
- Why do you think it's important for teachers to be able to recognize how children are demonstrating these skills and concepts?
- What will you take from this learning experience to your work with young children?

Deeper Understanding

Some children in preschool programs have physical or visual disabilities, which may make it more difficult for them to practice and acquire the knowledge and skills described in the physical development foundations. It may also be difficult for children with certain disabilities to demonstrate movement skills or their understanding of movement concepts.

Slide 3

Ask students to review the introductory sections, examples and footnotes in the foundations, and the bibliographic notes for discussion of physical development and children with disabilities. Students are then to identify five ways that children with disabilities could demonstrate acquisition of a skill or concept described in the physical development foundations. They are to list the kind of disability the child might have and the strategy, including any modifications or supports needed.

Online Options

Students post their strategies for ensuring that children with disabilities have opportunities to demonstrate their acquisition of some of the knowledge and skills described in the physical development foundations.

Physical Development Charades Cards

Page 1 of 3

Show balance and control when holding still.

Show balance control while moving in different directions and transitioning from one movement or position to another.

Walk with balance, oppositional arm movements, and a narrow base of support (space between feet).

Run with a long stride length and each foot off the ground. Opposition of arms and legs is becoming more consistent.

Jump for height (up or down) and for distance. Use arm swing to aid forward jump.

Demonstrate a variety of locomotor skills such as galloping, sliding, hopping, and leaping.

Physical Development Domain: Demonstrating the Content of the Physical Development Domain
Handout 1 – Physical Development Charade Cards

Physical Development Charades Cards

Page 2 of 3

Show gross motor manipulative skills by using arms, hands, and feet, such as rolling a ball underhand, tossing underhand, bouncing, catching, striking, throwing overhand, and kicking.

Show fine motor manipulative skills using hands and arms such as in-hand manipulation, writing, cutting, and dressing.

Demonstrate knowledge of body parts.

Use own body or other people's space when locating or relating to other people or objects in space.

Show understanding and ability to distinguish between the sides of the body.

Change directions quickly and accurately.

Physical Development Charades Cards

Page 3 of 3

Place an object or own body in front of, to the side of, or behind something.

Demonstrate two-handed fine motor activities.

Initiate complex physical activities for a sustained period of time.

Engage in sustained active play that involves the heart, lungs, and vascular system.

Engage in active play activities that enhance leg and arm strength, muscular endurance, and flexibility.

Physical Development: Exploring the Content of the Physical Development Domain Through Vocabulary

Focus Statement

Students become familiar with the vocabulary and terminology of the physical development foundations by identifying and defining words and terms that have new or unfamiliar meanings in the context of children's physical development and activity.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Health, Safety and Nutrition
- Practicum-Field Experience

Instructional Methodologies

- Class discussion
- Note-taking guide or outline
- Pairs or small group work
- Peer review and feedback
- Reflection—individual or large group
- Role playing

Physical Development Domain:
Exploring the Content of the Physical Development Domain Through
Vocabulary

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Observation, Screening, Assessment, and Documentation
- Health, Safety, and Nutrition
- Professionalism

Physical Development: Exploring the Content of the Physical Development Domain Through Vocabulary

Before You Start

Many students will think of children's physical development in terms of gross motor activities or development such as walking, running, jumping, hopping, skipping, throwing, and catching. They may be less familiar with the strands and substrands of physical development as described in the foundations. It is important for students to become familiar with the vocabulary of these strands and substrands so that they understand them and can recognize when a child is demonstrating a particular skill. Students should also be aware of some of the issues related to physical development and activity and the related terminology. Some words are commonly used but may have distinctions that are not generally made. For example, obesity and overweight both describe weight ranges that are greater than what is considered healthy for a certain height, but each reflects a different percentile range of a body mass index and therefore should not be used interchangeably.

You may want to prepare for this learning experience by creating chart paper or handouts for the students by writing a strand on the top of the sheet and then dividing the sheet into rows—one row for each substrand. Each row is then labeled with the name of the substrand. A sample handout is provided with this learning experience. An electronic version of the handout will be available when this instructional guide is online at www.wested.org/facultyinitiative.

Physical Development Domain:
Exploring the Content of the Physical Development Domain Through
Vocabulary

Information Delivery

Slides 2-4

The three strands and their accompanying substrands are found on page 45 of the *California Preschool Learning Foundations, Volume 2* (PLF, V2) and listed here for quick reference:

Fundamental Movement Skills (Strand)

1.0 Balance (Substrand)

2.0 Locomotor Skills (Substrand)

3.0 Manipulative Skills (Substrand)

Perceptual-Motor Skills and Movement Concepts (Strand)

1.0 Body Awareness (Substrand)

2.0 Spatial Awareness (Substrand)

**3.0 Directional Awareness (Substrand)****Active Physical Play (Strand)****1.0 Active participation (Substrand)****2.0 Cardiovascular Endurance (Substrand)****3.0 Muscular Strength, Muscular Endurance, and Flexibility (Substrand)****Active Learning****Getting it started**

You may have students do this learning experience individually, in pairs, or in small groups. Each student or group of students can do all the strands and substrands, or you can assign specific strands/substrands to them.

Slide 5

Ask students to review their assigned strand(s) and strand(s) and, using the handout, make a list of the words that are new or unfamiliar to them in the context of children's physical development. Encourage them to include words that they are not sure of; they do not need to know the definitions of the words they choose. If students are working in groups, have them include words that are new or unfamiliar to even just one or two members of the group. The purpose is to generate a list of new or unfamiliar vocabulary.

Keeping it going

If students do all the strands, have them share their lists to see if there are additional words they want to add. If students work on assigned strands, have the other groups review and add words to the lists. This could be done as a carousel activity in which each group posts its list on the wall and then the other groups rotate around the room and add words to each list.

Putting it together

Then ask students to write definitions by the words on their lists.

If students are working in groups, encourage them to ask each other for clarification and help each other come up with succinct definitions. They can use the glossary on pages 61–63 of the *California Preschool Learning Foundations, Volume 2* for assistance as needed.

Online Options

Students develop their own lists of new and unfamiliar terms and write definitions for these words. They then post their lists online and compare lists.

Taking it further

Point out to students that parents also may not be familiar with some of the terms and concepts related to children's physical development. Have students form pairs and develop a scenario in which a teacher is describing to a parent what his child is doing in areas of physical development. The students are to include some of the terms from the vocabulary lists and define the terms for the parent while sharing what the child is doing. You may choose to assign a substrand to each pair or let students choose their own. In either case, make sure all substrands are covered.

Then ask students to role-play their scenarios. After all the teams have presented, close the session with a discussion that could include the following questions:

Slide 6

- What stands out for you from these scenarios?
- Which terms were easy to define? Which ones were more difficult?
- Why do you think it's important to share this terminology with parents?
- What are ways you might share this information with parents?

Another approach/way

After students have developed individual lists of terms, you can ask the students to post their terms on chart paper or a white board and generate a full class list (similar to a vocabulary wall). Then you can define the words as a full class discussion.

If you have individual students or groups of students create vocabulary lists of different strands/substrands, have them exchange their lists and write the definitions. Students can then share lists so all students have a complete list for the domain.

Reflection

Slides 7-8

After the students have completed their lists, ask them to respond to the following questions:

- Which words were new or unfamiliar to you?
- Which words had a definition that was different from how you define or use them?

Online Options

After comparing lists, students can respond to each of the reflection questions in an online discussion.

- Which terms describe behaviors that will be easy for you to observe in children? Which ones will be more difficult to observe?
- Why do you think it's important for teachers to understand this physical development vocabulary?
- How can you become more familiar with words that were new to you in your work with children?

Vocabulary of the Physical Development Domain

| Fundamental Movement Skills | | |
|-----------------------------|------|------------|
| Substrand | Word | Definition |
| Balance | | |
| Locomotor Skills | | |
| Manipulative Skills | | |

Physical Development: Exploring the Research and Rationale for the Physical Development Domain

Focus Statement

Students become familiar with some of the research base for the physical development domain by reviewing introductory and bibliographic material related to specific topics around children's physical development.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Child, Family and Community
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Health, Safety and Nutrition
- Teaching in a Diverse Society
- Practicum-Field Experience

Instructional Methodologies

- Literature review
- Note-taking outline or guide
- Presentation
- Reflection—individual or large group
- Short paper
- Small group work

Physical Development Domain:
Exploring the Research and Rationale for the Physical Development Domain

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Culture, Diversity, and Equity
- Relationships, Interactions, and Guidance
- Family and Community Engagement
- Observation, Screening, Assessment, and Documentation
- Health, Safety, and Nutrition
- Professionalism
- Administration and Supervision

Physical Development:

Exploring the Research and Rationale for the Physical Development Domain

Before You Start

Having students become familiar with some of the research base and rationale for the physical development foundations will help students increase their understanding of the importance of physical activity and physical development in the preschool years and the role of preschool programs. Students need to be aware of the many ways teachers can support children's overall development in the preschool years through well-planned physical activities and experiences.

Some students may believe that young children's physical development is solely a naturally occurring neuromotor process that does not require much intentional teaching. However, the research points out that there are many aspects to children's physical development:

- What actually are foundational movement skills and concepts
- The important role of physical development and activity in children's long-term health
- The links between physical development and children's development in other areas such as cognitive and social-emotional
- The relationship of children's physical play and the natural world
- The influence of families and culture on children's physical development
- What teachers should know about developmentally appropriate activities that support children's physical activity and development

In this learning experience, several topics are suggested for students to research. However, you may wish to identify your own topics or have students come up with their own based on some initial reading of the physical development chapter of the *California Preschool Learning Foundations, Volume 2*.

Information Delivery

The following sections from the *California Preschool Learning Foundations, Volume 2* (PLF, V2) will be used in this learning experience:

- Introductory material (pp. 37–45)

- Bibliographic Notes (pp. 58–60)
- References and Source Materials (pp. 64–69)

You may have students read these sections before class or provide time for them to do so.

Active Learning

Getting it started

Begin by having students review the introductory material and bibliographic notes and ask them to pull out key points related to one of the following topics:

Slide 2

- Sequential development of fundamental movement skills
- Importance of movement and physical play and activity
- Relationship of physical activity and health
- Relationship of physical activity and academic performance
- Importance of adult instruction in children's development of physical skills
- Relationship of children's physical play and social-emotional development
- Physical development and children with disabilities

Online Options

Individual students could be assigned to list the key points from introductory material and the bibliographic notes on one of the seven topics. Students would then post their notes online.

Slide 3

Keeping it going

Students next choose one topic and select one research study for their chosen topic. They can use a reference listed in the introductory material, bibliographic notes, or references and source materials in the *California Preschool Learning Foundations, Volume 2* (pp. 37–44, 58–60, 64–69).

Putting it together

Students are then to write a short paper that describes the research and findings and which foundations are addressed through the research.

Taking it further

Ask students who chose the same topic to form a group and share their papers. They then summarize their papers in one document that includes this information:

Slide 4

- Listing and overview of the research articles
- Summary of the findings
- Discussion of how the findings relate to specific foundations

These papers can then be shared with the whole class.

Another approach/way

Instead of students initially preparing individual papers and then consolidating their findings, you could have students begin by forming small groups and selecting a topic for further study. They then prepare a joint paper on the topic to share with the other students. If you choose this approach, you may want to make sure that each group selects a different topic.

You may also choose to have students prepare some kind of classroom presentation instead of writing papers.

Reflection

Conclude this learning experience by having students respond to these questions individually, such as through reflective journals, or in a class discussion:

Slides 5-6

- What key finding from the research really caught your attention?
- What were some new insights you gained?
- Which studies or findings did you find most relevant to your understanding of the foundations?
- How did a finding challenge or affirm your beliefs?
- What question(s) did the research raise for you?
- What is a next step you will do in answering this question?

Online Options

Students could post their papers online and then respond to the reflection questions in an online discussion.

Deeper Understanding

Depending on students' experience with and exposure to research studies, you could ask students to do a more comprehensive literature review on their chosen topic. They could then develop a paper or presentation that includes the following elements:

- Overview of the research
- Summary of findings, key points, and recommendations from

Slide 7

the studies

- How the research relates to particular foundations
- Possible implications for practice—ways that preschool teachers can support children's acquisition of the knowledge and skills described in the physical development foundations

Physical Development: Linking Preschool Learning Foundations and the Kindergarten Content Standards Related to Physical Development

Focus Statement

Students become familiar with the California Department of Education's *Physical Education Model Content Standards for California Public Schools, Kindergarten Through Grade Twelve* (2006) and explore their relationship to the physical development foundations in the *California Preschool Learning Foundations, Volume 2*.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Child, Family and Community
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Health, Safety and Nutrition
- Teaching in a Diverse Society
- Practicum-Field Experience

Instructional Methodologies

- Jigsaw reading
- Lecture
- Pairs or small group work
- Peer review and feedback
- Reflection paper
- Reflective discussion—large group

Physical Development Domain:
Linking Preschool Learning Foundations and the Kindergarten
Content Standards Related to Physical Development

- Short paper

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Culture, Diversity, and Equity
- Family and Community Engagement
- Observation, Screening, Assessment, and Documentation
- Learning Environments and Curriculum
- Health, Safety, and Nutrition
- Leadership in Early Childhood Education
- Professionalism
- Administration and Supervision

Physical Development:

Linking Preschool Learning Foundations and the Kindergarten Content Standards Related to Physical Development

Before You Start

In this learning experience, students are introduced to the California Department of Education's *Physical Education Model Content Standards for California Public Schools, Kindergarten Through Grade Twelve* (2006). It is important for students to be aware of these content standards and the ways in which they align with the preschool learning foundations for physical development.

Students will be reviewing the content standards for this learning experience, so you may want to remind students that they can download the standards from the California Department of Education's Web site (www.cde.ca.gov/be/st/ss/).

Handout 1, following this learning experience, is a sample of a grid that students can use when determining relationships between the standards and the foundations. An electronic version of the handout will be available when this instructional guide is online at www.wested.org/facultyinitiative.

Physical Development Domain:
Linking Preschool Learning Foundations and the Kindergarten Content Standards Related to Physical Development

Information Delivery

Students will be asked to review the physical development domain foundations in the *California Preschool Learning Foundations, Volume 2* and the *Physical Education Model Content Standards for California Public Schools, Kindergarten Through Grade Twelve* (2006).

Slides 2-7

The following is a summary of the five overarching model content standards for kindergarten (as well as the other elementary grades and middle school) and the concepts and skills for each standard:

1. Students demonstrate the motor skills and movement patterns needed to perform a variety of physical activities.
 - Movement Concepts
 - Body Management
 - Locomotor Movement
 - Manipulative Skills

- Rhythmic Skills

2. Students demonstrate knowledge of movement concepts, principles, and strategies that apply to the learning and performance of physical activities.

- Movement Concepts
- Body Management
- Locomotor Movement
- Manipulative Skills

3. Students assess and maintain a level of physical fitness to improve health and performance.

- Fitness Concepts
- Aerobic Capacity
- Muscular Strength/Endurance
- Flexibility
- Body Composition
- Assessment

4. Students demonstrate knowledge of physical fitness concepts, principles, and strategies to improve health and performance.

- Fitness Concepts
- Aerobic Capacity
- Muscular Strength/Endurance
- Flexibility
- Body Composition

5. Students demonstrate and utilize knowledge of psychological and sociological concepts, principles, and strategies that apply to the learning and performance of physical activity.

- Self-Responsibility
- Social Interaction
- Group Dynamics

This information can be reviewed prior to or during class, and can be presented as a lecture or through assigned reading.

Active Learning

Slide 8

Getting it started

Have students review the kindergarten content standards (pp. 1–4) of the *Physical Education Model Content Standards for California Public Schools, Kindergarten Through Grade Twelve*.

Keeping it going

Have the students compare the standards with the physical development strands, substrands, and foundations and note where there are connections. They can do this by marking an X in the Handout 1 grid where they see a link. They can also write a few explanatory notes in the grid boxes. Students could do this comparison individually or in pairs or small groups. Depending on the size of your class and the amount of time allotted for this learning experience, you may choose to assign specific combinations of foundations and standards to individual or groups of students.

Putting it together

If students have worked in groups, have the groups present their grids to the rest of the class. Ask if there are other connections that may not have been noted or if there are questions about any of the relationships indicated.

If students have worked individually and compared all the standards with the foundations, have them compare their grids with another student. Have them discuss any differences in their grids.

Online Options

Students could post their completed grids online for review by their classmates and conduct an online discussion of the reflection questions.

Another approach/way

Instead of completing a grid, have students write a reflection paper that addresses the questions in the reflection section of this learning experience.

Reflection

Slides 9-10

Conclude the session by having the class discuss the following questions:

- What are the purposes of the preschool learning foundations and the kindergarten content standards?
- Where do you see similarities and differences between the physical development foundations and the physical

education model content standards for kindergarten? What might be some reasons for these similarities and differences?

- Why is it important for preschool teachers to be aware of the kindergarten content standards?
- What are some general ways that preschool teachers and kindergarten teachers can use the preschool physical development foundations and the kindergarten physical education model content standards in their classroom practices?

Deeper Understanding

Slide 11

The *California Preschool Learning Foundations, Volume 2* cites the recommendations for physical activity by the National Association for Sport and Physical Education (NASPE) as the current best practice for preschool programs. NASPE has developed national standards and guidelines as well as position statements related to physical activity, physical education, and professional development and conduct.

The following are a few of the position statements on the NASPE Web site (<http://www.aahperd.org/naspe/>):

- Physical Education is Critical to Educating the Whole Child
- Looking at Physical Education from a Developmental Perspective: A Guide to Teaching
- Comprehensive School Physical Activity Programs

NASPE also has published the second edition of *Active Start: A Statement of Physical Activity Guidelines for Children from Birth to Age 5, 2nd Edition*. A summary of the guidelines for infants, toddlers, and preschoolers are on the Web site description of the publication.

The summary can be accessed by going to <http://www.aahperd.org/naspe/standards/nationalGuidelines/> and then clicking on “Physical Activity Guidelines – learn more.” Next click on the “learn more” link for *Active Start: A Statement of Physical Activity Guidelines for Children from Birth to Age 5, 2nd Edition*.

A position statement titled “Appropriate Practices in Movement Programs for Young Children Ages 3–5” is also available for download by members of the American Alliance for Health, Physical Education, Recreation and Dance (<http://www.aahperd.org/naspe/standards/nationalGuidelines/>)

[Apppracticedoc.cfm](#)).

Ask students to review one or more documents from NASPE and prepare a presentation or write a paper that relates key points from the document to the physical development foundations or the kindergarten content standards.

Group Dynamics

Social Interaction

Self-Responsibility

Physical Development: Exploring the Impact of Family and Community on Children's Physical Development

Focus Statement

Students identify and consider a variety of family beliefs, values, practices, and circumstances that relate to children's physical development and physical activity by brainstorming and discussing opportunities, supports, and challenges for children to participate in or observe different kinds of physical activity.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Child, Family and Community
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Health, Safety and Nutrition
- Teaching in a Diverse Society
- Practicum-Field Experience

Instructional Methodologies

- Brainstorming—individual or small group
- Class discussion
- Pairs or small group work
- Personal reflection
- Reflection—individual or large group

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in

Physical Development Domain:
Exploring the Impact of Family and Community on Children's Physical Development

the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Culture, Diversity, and Equity
- Relationships, Interactions, and Guidance
- Family and Community Engagement
- Health, Safety, and Nutrition
- Professionalism

Physical Development:

Exploring the Impact of Family and Community on Children's Physical Development

Before You Start

Students may not always consider children's physical development as an area in which much instruction is needed. The following statement from the introduction to the physical development domain describes this belief: "Physical development is often thought of as something that happens naturally when children receive adequate nutrition and the opportunity for active physical play" (*California Preschool Learning Foundations, Volume 2*, p. 37). The introduction further states, ". . . many children may never fully develop their physical skills without adult encouragement and instruction" (*California Preschool Learning Foundations, Volume 2*, p. 37). Thus, opportunities for children to engage in active physical play are not in themselves always enough.

Also, opportunities for physical play may be limited for some children because of unsafe outdoor environments, limited access to indoor recreational facilities such as gyms and recreation centers, limited time allotted for play at school and/or home, and parents' own interests and background in physical activity. Parents' beliefs and values around physical play may also impact how much children are encouraged and allowed to engage in physical activity. For example, some families may see activities such as looking at books or learning to use a computer or other electronic device as more important and valuable.

However, physical development and activity are an important part of young children's development. "Physical development and physical activity play an important role in health through a child's life span. In particular, being physically active protects against cardiovascular disease, diabetes, and obesity. It also contributes to mental health and psychological well-being" (*California Preschool Learning Foundations, Volume 2*, p. 37).

Understanding how family, community, and cultural factors impact children's attitudes about physical activity as well as their opportunities for physical play will help students support children's physical development in the preschool setting.

Information Delivery

Have the students review the foundations either at the beginning of the session or prior to class. Make sure they note the differences in each foundation for children at around 48 months of age and at around 60 months of age.

Physical Development Domain:
Exploring the Impact of Family and Community on Children's Physical Development

Active Learning

Getting it started

Ask students to brainstorm a list of ways children can learn and develop balance, locomotor skills, manipulative skills, body awareness, spatial awareness, directional awareness, cardiovascular endurance, muscular strength, muscular endurance, and flexibility. Students can create their lists individually or in pairs or small groups.

Keeping it going

Then develop a class list by having each student, pair, or small group share one idea. Chart these ideas so that all students can easily see the list. Continue to have students take turns contributing a new idea to the list until all their ideas are shared.

Online Options

If you have document-sharing capability, you could have students add their brainstorming ideas to an online list and highlight those that can be done at home or in the community.

Putting it together

Next read each idea on the list and put a symbol, such as an asterisk or star, by each activity idea that could be done in the children's homes or communities.

Taking it further

Review the things that can be done at home or in the community and ask students to think of things that support each activity. It would be helpful to also chart these supports. The following are some examples that students may share:

Slides 2-3

- Parents value physical activity.
- Parents enjoy and engage in and model physical activity.
- Parents have time to take children to parks/playgrounds where they can engage in physical play and try out new skills and equipment.
- Parents have the financial resources to take children to sporting events.
- There are safe areas for children to play outside every day.
- Family events include physical activities.
- The family's culture includes activities that involve physical skill and activity.
- Parents provide simple age-appropriate equipment for

children to use.

Next ask students to think of things that may be barriers. Examples might include the opposite of some of the supports as well as others:

Slides 4-5

Online Options

Then have students create another shared document in which they list supports and barriers.

- Parents don't place a priority on physical activity.
- Children do not see family members and friends engaging in physical activities.
- Parents/caregivers do not take children to parks/playgrounds/other places to engage in physical play.
- Safe outdoor play areas are not easily accessible to families.
- Children have few opportunities to play outside every day because of school, child care, and/or transportation schedules.
- Children are encouraged to do more sedentary activities.
- Children have limited access to age-appropriate equipment such as balls, swings, climbing equipment, riding toys, and so on.
- The costs of taking children to sporting events are prohibitive.
- The costs associated with children participating in physical activities or taking sports or dance lessons are prohibitive.

Another approach/way

You may choose to have students reflect on their own experiences with physical activity when they were children or, if they are currently working with young children, physical activities they have observed young children engaged in. They can use these examples to generate the lists described in "Getting it started." Ask students to try to think of a wide range of activities that support the development of balance, locomotor skills, manipulative skills, body awareness, spatial awareness, directional awareness, cardiovascular endurance, muscular strength, muscular endurance, and flexibility.

Reflection

Have the class reflect on this learning experience by responding to the following questions:

- What activities on the list surprised you?

Slide 6

- Which activities do you think are easiest for children and families in your community to do? Which ones are more difficult for them to do?
- Why is it important to consider family and community beliefs, values, practices, and circumstances when thinking about children's physical development and activity?
- What is a key message from this learning experience that you will remember when using the physical development foundations in your teaching?

Physical Development: Communicating Understanding of the Physical Development Domain in the Contexts of Family and Culture

Focus Statement

Students explore ways to communicate with families about the role of families in their children's physical development.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Child, Family and Community
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Health, Safety and Nutrition
- Teaching in a Diverse Society
- Practicum-Field Experience

Instructional Methodologies

- Creation of a visual representation
- Interviews of parents
- Peer review and feedback
- Reflection—individual or large group

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early

Physical Development Domain:
Communicating Understanding of the Physical Development Domain
in the Contexts of Family and Culture

Childhood Educator Competencies. “The Competency Areas to Consider” below are listed in this instructional guide as a preliminary exploration of how particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Culture, Diversity, and Equity
- Relationships, Interactions, and Guidance
- Family and Community Engagement
- Observation, Screening, Assessment, and Documentation
- Health, Safety, and Nutrition
- Professionalism

Physical Development: Communicating Understanding of the Physical Development Domain in the Contexts of Family and Culture

Before You Start

It is important for students to understand that there are many factors contributing to young children's physical development and the amount of physical activity they do. The role of families is one of these factors. The diverse cultures of California's families lead to varied beliefs, understandings, and expectations held by families about the importance of physical activity, the links between physical development and other areas of children's development, and the parents' involvement in their children's active physical play.

In addition, family circumstances may impact the kind and amount of physical activity that children engage in at home and in their community. "Some parents may not have the time to supervise children in active outdoor play, provide instruction, or model fundamental movement skills" (*California Preschool Learning Foundations, Volume 2*, p. 39). Some families' economic resources may also limit the options for physical activity available to children.

This learning experience may also raise some sensitive issues or memories for some students in your class. It may be helpful to preface any discussions with the reminder that increased understanding of families' different belief systems and practices around children's physical development will help students come up with diverse approaches for partnering with families in supporting children's acquisition of the knowledge and skills described in the physical development foundations.

Information Delivery

Have the students review the foundations either at the beginning of the session or prior to class. Make sure they note the differences in each foundation for children at around 48 months of age and at around 60 months of age.

Students also should be familiar with the key concepts in the introductory material to the physical development foundations of the *California Preschool Learning Foundations, Volume 2* (PLF, V2, pp. 37–45).

Active Learning

Getting it started

Review the foundations with the class, asking students to note

Physical Development Domain:
Communicating Understanding of the Physical Development Domain
in the Contexts of Family and Culture

any new or unfamiliar vocabulary, concepts, or skills. It may be helpful to ask for volunteers to demonstrate some of the skills that may need clarification

If you have done the learning experience “Exploring the Content of the Physical Development Domain Through Vocabulary,” you can have students refer to the vocabulary lists they developed for reminders.

If you have done the learning experience “Demonstrating the Content of the Physical Development Domain” or “Connecting to the Foundations in the Physical Development Domain by Experiencing Them,” students may already have a good understanding of the skills.

Keeping it going

Explain to students that they are to create a pamphlet that explains the foundations to parents. The pamphlet should convey a message about the importance of children’s physical development and physical activity as well as descriptions or explanations of the knowledge and skills at the strand or foundation level. Encourage students to be creative and think about all the families in their community. How can the pamphlets reflect the linguistic, cultural, and economic diversity of the families? You may choose to have students develop their pamphlets individually, in pairs, or in small groups.

Putting it together

Have students share their pamphlets with other members of the class. Depending on the number of pamphlets developed, students may not have the opportunity to review all the pamphlets. For example, if small groups developed the pamphlets, you could have two groups exchange their pamphlets. If students did the pamphlets individually, you could have a group of two to four students share their pamphlets. Ask students to identify three elements to praise and one recommendation for each pamphlet.

Online Options

Students could post their pamphlets online and then have an online class discussion using the reflection questions.

Taking it further

Ask students to share their pamphlet with parents of preschoolers and ask the parents for feedback. Students could use the following questions:

- What in the pamphlet stands out to you?

Slide 2

- What do you like about the pamphlet?
- What key messages are you taking away from the pamphlet?
- What parts of the pamphlet are not as clear?
- What are some recommendations for improving the pamphlet?

Reflection

Have the class reflect on this learning experience by responding to the following questions:

Slide 3

- What words or images do you remember from the pamphlets?
- Where did you see examples of linguistic, cultural, and economic considerations in the pamphlets?
- What did you learn from developing this pamphlet about discussing young children's physical development and activity with parents?
- What would you do differently?

Physical Development: Exploring Examples of the Physical Development Domain

Focus Statement

Students explore the examples of the foundations in this domain by first relating to what they have seen children do and then by engaging in observation to look for examples of the foundations in action. Experiences are designed to help students understand that the examples in the foundations are not criteria and that children will demonstrate the foundations in many settings and ways.

Student Learning Outcomes

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Health, Safety and Nutrition
- Practicum-Field Experience

Instructional Methodologies

- Class discussion
- Observation
- Pairs work
- Reflection—individual or large group
- Video observation

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in

Physical Development Domain:
Exploring Examples of the Physical Development Domain

the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Culture, Diversity, and Equity
- Observation, Screening, Assessment, and Documentation
- Learning Environments and Curriculum
- Health, Safety, and Nutrition

Physical Development: Exploring Examples of the Physical Development Domain

Before You Start

Before doing this learning experience, it would be helpful to acquaint your students with the structure and content of the physical development domain. The learning experience titled “Piecing Together the Physical Development Domain Content Puzzle” would be appropriate for this purpose. It will be important to acquaint students with the strands and the pattern of the substrands in this domain.

Become familiar, yourself, with the examples of children’s physical development in this domain. Also recognize the importance of helping students understand that the examples provided in the *California Preschool Learning Foundations, Volume 2* publication are examples and not criteria that children must demonstrate. Children are expected to demonstrate the foundations in a variety of ways and settings using a wide range of materials.

Two handouts are provided with this learning experience: Handout 1 has the summary of the physical development domain strands, substrands, and foundations (also found in Appendix C of this instructional guide) and Handout 2 is an observational guide. Electronic versions of both will be available when this instructional guide is online at www.wested.org/facultyinitiative.

Physical Development Domain:
Exploring Examples of the Physical Development Domain

Active Learning

Getting it started

Ask students to spend some time examining the examples provided for each of the foundations in the physical development domain. Depending on the size of your class or your preferences for work groups, assign strands or substrands to pairs of students.

Ask the students to work in pairs to read through the examples for their assigned strand or substrand and discover examples that they have seen or heard in young children and write them down.

Then you might also ask if they have seen or heard, or can think of, other ways in which children might demonstrate each foundation in their strand or substrand and write those down as well.

As students identify and list examples, suggest that they pay particular attention to the pattern of substrands across the

strands in the domains in the *California Preschool Learning Foundations, Volume 2* (PLF, V2). It might make it easier to process and internalize these foundations once they are familiar with the consistencies in the domains.

Then reconvene the students into a large group and ask for observations on the process they just went through. Ask students, "What did you learn about these foundations and the examples?"

Keeping it going

To extend this understanding, ask students to build an example bank for the physical development foundations. Through observing children in preschool settings, they will discover examples of the foundations that might not be found in the PLF, V2.

Ask students to observe children in a preschool classroom. This could be where they are currently working or where they might have approved access to do an observation. Assign the students, in pairs or individually, to specific strands as the focus for their observations.

Provide them with a list of the physical development domain foundations (see Handout 1), and the "Observational Guide" (Handout 2) included with this learning experience.

Remind the students that, when they look for examples in settings in which they are working or with children they know, they are looking for observable behaviors or actions that demonstrate the foundations in action.

The focus of this learning experience is not to assess children's development but rather to explore the foundations and see where and how children demonstrate aspects of these foundations in their daily activities and routines.

Students might be unsure if something is an example or they might be reluctant to label the development that they are observing, but suggest that they just document what they see as examples of the foundations and bring them back to class for discussion. It is in the discussion that greater understanding and clarity will emerge.

Putting it together

Ask students to bring their lists of examples to class. Give students chart paper or whiteboard space so that they can display the examples they observed. Each student can write the examples out on strips of paper or list them on chart

paper so that the entire class can see them. Be sure the examples are arranged by the strands or substrands that were observed.

Give students time to walk about and see what has emerged.

The following questions could be used to have the students discuss their review of the examples:

Slides 2-3

- Is there anything you particularly noticed about all the examples?
- Were there some areas or activities in the classroom where it was difficult to see these foundations in action?
- Were there some areas where it was easy?
- Were some strands easier to see than others? Which ones? Why?
- What does this tell you about the importance of ongoing observation in early care and education settings?
- What are the implications of this for your current or future work with young children?

Online Options

Students' examples could be submitted online prior to class discussion and organized online by strands for all students to see and save.

Online Options

The set of questions for reflection could also be responded to in an online format.

Be sure that the examples are collected and made available as a resource to students.

Another approach/way

Building example banks could also be done using video. Or, before students do this as an observation assignment, you might want to practice these observations with some video of children in early care and education settings.

Consider using videos you already might have or the California Department of Education, Child Development Division's DVD *A World Full of Language*. There are several examples in this video of music and movement with children.

Here again, you might assign students individually or in pairs to a strand. Have them use the same handouts, provided for this learning experience, that they would use in observing children in early care and education settings.

Physical Development

Fundamental Movement Skills

1.0 Balance

| At around 48 months of age | At around 60 months of age |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| 1.1 Maintain balance while holding still; sometimes may need assistance. | 1.1 Show increasing balance and control when holding still. |
| 1.2 Maintain balance while in motion when moving from one position to another or when changing directions, though balance may not be completely stable. | 1.2 Show increasing balance control while moving in different directions and when transitioning from one movement or position to another. |

2.0 Locomotor Skills

| | |
|--------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.1 Walk with balance, not always stable, oppositional arm movements still developing, and relatively wide base of support (space between feet). | 2.1 Walk with balance, oppositional arm movements, and relatively narrow base of support (space between feet). |
| 2.2 Run with short stride length and feet off the ground for a short period of time. May show inconsistent opposition of arms and legs. | 2.2 Run with a longer stride length and each foot off the ground for a greater length of time. Opposition of arms and legs is more consistent. |
| 2.3 Jump for height (up or down) and for distance with beginning competence. | 2.3 Jump for height (up or down) and for distance with increasing competence. Uses arm swing to aid forward jump. |
| 2.4 Begin to demonstrate a variety of locomotor skills, such as galloping, sliding, hopping, and leaping. | 2.4 Demonstrate increasing ability and body coordination in a variety of locomotor skills, such as galloping, sliding, hopping, and leaping. |

Copyright © 2010 California Department of Education, Child Development Division

3.0 Manipulative Skills

| At around 48 months of age | At around 60 months of age |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.1 Begin to show gross motor manipulative skills by using arms, hands, and feet, such as rolling a ball underhand, tossing underhand, bouncing, catching, striking, throwing overhand, and kicking. | 3.1 Show gross motor manipulative skills by using arms, hands, and feet with increased coordination, such as rolling a ball underhand, tossing underhand, bouncing, catching, striking, throwing overhand, and kicking. |
| 3.2 Begin to show fine motor manipulative skills using hands and arms such as in-hand manipulation, writing, cutting, and dressing. | 3.2 Show increasing fine motor manipulative skills using hands and arms such as in-hand manipulation, writing, cutting, and dressing. |

Perceptual-Motor Skills and Movement Concepts

1.0 Body Awareness

| At around 48 months of age | At around 60 months of age |
|-------------------------------------------------------|------------------------------------------------------------------|
| 1.1 Demonstrate knowledge of the names of body parts. | 1.1 Demonstrate knowledge of an increasing number of body parts. |

2.0 Spatial Awareness

| | |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 2.1 Use own body as reference point when locating or relating to other people or objects in space. | 2.1 Use own body, general space, and other people's space when locating or relating to other people or objects in space. |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|

3.0 Directional Awareness

| | |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 3.1 Distinguish movements that are up and down and to the side of the body (for example, understands "use that side, now the other side"). | 3.1 Begin to understand and distinguish between the sides of the body. |
| 3.2 Move forward and backward or up and down easily. | 3.2 Can change directions quickly and accurately. |

3.0 Directional Awareness (Continued)

| At around 48 months of age | At around 60 months of age |
|--------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| 3.3 Can place an object on top of or under something with some accuracy. | 3.3 Can place an object or own body in front of, to the side, or behind something else with greater accuracy. |
| 3.4 Use any two body parts together. | 3.4 Demonstrate more precision and efficiency during two-handed fine motor activities. |

Active Physical Play

1.0 Active Participation

| At around 48 months of age | At around 60 months of age |
|----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| 1.1 Initiate or engage in simple physical activities for a short to moderate period of time. | 1.1 Initiate more complex physical activities for a sustained period of time. |

2.0 Cardiovascular Endurance

| | |
|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 2.1 Engage in frequent bursts of active play that involves the heart, the lungs, and the vascular system. | 2.1 Engage in sustained active play of increasing intensity that involves the heart, the lungs, and the vascular system. |
|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|

3.0 Muscular Strength, Muscular Endurance, and Flexibility

| | |
|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 3.1 Engage in active play activities that enhance leg and arm strength, muscular endurance, and flexibility. | 3.1 Engage in increasing amounts of active play activities that enhance leg and arm strength, muscular endurance, and flexibility. |
|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|

Physical Development in the Early Care and Education Setting: Exploring Images

Focus Statement

Students find visual images, such as photographs or magazine pictures, of children demonstrating the skills of the physical development foundations and relate them to interest areas in early care and education settings.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Practicum-Field Experience

Instructional Methodologies

- Creation of a visual representation
- Pairs work
- Reflection—individual or large group
- Reflective discussion—large group

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how particular competency areas might be addressed through these learning

Physical Development Domain:
Physical Development in the Early Care and Education Setting:
Exploring Images

experiences.

- Child Development and Learning
- Culture, Diversity, and Equity
- Observation, Screening, Assessment, and Documentation
- Learning Environments and Curriculum

Physical Development:

Physical Development in the Early Care and Education Setting: Exploring Images

Before You Start

Students will be working with photographs that provide examples of children demonstrating the foundations of the physical development domain. Be sure that students have appropriate parental authorization for any photographs of young children that are shared in class.

This learning experience will be most successful if students are familiar with the foundations in this domain. The learning experience in this instructional guide titled “Piecing Together the Physical Development Domain Content Puzzle” is designed to do that.

This learning experience will unfold over at least two class sessions or as much time as is appropriate for your class. It could be done over an entire semester.

In the first session, students review the foundations in this domain and are introduced to the interest areas that are described in the *California Preschool Curriculum Framework, Volume 1* on page 15. They then find photographs or magazine or online images of children in these interest areas that demonstrate foundations that might be seen in these areas.

Before the second class, prepare a chart paper, labeled for each interest area, that can be used to display the images the students found related to the foundations in that interest area.

Physical Development Domain:
Physical Development in the Early Care and Education Setting:
Exploring Images

Information Delivery

Review the strands, substrands, and foundations for the physical development domain. This can be done by taking turns reading them aloud or having students take turns reading them to each other in pairs. They are summarized in the *California Preschool Learning Foundations, Volume 2* (PLF, V2) Appendix on pages 108–110.

Slide 2

Students also will be working with the interest areas to support children’s play that are listed in the *California Preschool Curriculum Framework, Volume 1*. These are on page 15 of the framework and listed here for reference:

- Dramatic play area
- Block area

- Art area
- Book area
- Writing area
- Math area
- Science area

Active Learning

Getting it started

Let students know that they will be working with images that relate to the foundations in the physical development domain. Students will be assigned to find images that reflect physical development foundations as they might be seen in each of the interest areas.

There are several ways you can assign students to find images. They can do this individually or in pairs. Each student or pair could be assigned to one substrand and all interest areas or one substrand and selected areas.

You can ask students to bring in a certain number of images, such as five for each area or substrand they are working with. This will encourage students to observe carefully and be selective in their images.

Students might be inclined to focus on one type of physical development in some areas, such as manipulative skills, but encourage them to watch for other kinds of movement and perceptual-motor skills as well.

Keeping it going

When students return with their images and/or photographs, have them tape them to the chart paper for the appropriate interest area. Ask them to identify the foundation that is being demonstrated and write it beneath or next to the image. You can also do this with Post-it® notes. Try to do this in a way that creates a collage of images.

Online Options

Students could post the photographs or images they find online for review by the whole class. They could then have an online discussion using the questions in “Putting it together.” If possible, create a collage of online images.

Give students time to walk around to view the images.

Putting it together

Review the results by leading a discussion using the following questions:

- What are your general impressions of the results?

Slides 3-4

- Are you surprised by anything?
- Where are there many images and where are there fewer?
- Which foundations are represented the most? Which the least?
- Of those that are represented the least, in what other areas or times in the curriculum could you expect to find them?
- What does this suggest about your observation of the foundations in the physical development domain in your current or future work?

Taking it further

This could continue to be developed as a long-term collage-creating experience. It could last over several weeks or longer. If, after reviewing the images in the first session, there are some foundations that are not well represented, try brainstorming where those might be seen. Then ask students to work on finding images for those foundations.

Reflection

Slide 5

The following questions can be used to guide students' reflection on this learning experience:

- What stood out for you in this experience?
- What insights did you gain?
- Are there ways in which this will influence your work with young children now or in the future?

Physical Development:

Exploring the Relationships of the Foundations in the Physical Development Domain to Foundations in Other Domains

Focus Statement

Students explore the relationships between strands in the physical development domain and strands in other domains of the *California Preschool Learning Foundations, Volume 2*. Students can work with focused comparisons as pairs or in small groups and then expand their explorations to other domains through group discussion.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Practicum-Field Experience

Instructional Methodologies

- Pairs or small group work
- Reflection—individual or large group
- Reflective discussion—large group

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how

Physical Development Domain:
Exploring the Relationships of the Foundations in the Physical Development Domain to Foundations in Other Domains

particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Culture, Diversity, and Equity
- Dual-Language Development
- Special Needs and Inclusion
- Learning Environments and Curriculum

Physical Development:

Exploring the Relationships of the Foundations in the Physical Development Domain to Foundations in Other Domains

Before You Start

This learning experience will explore relations across domains where the physical development foundations may be related to foundations in other domains. Students will look at which foundations might be co-developing or which foundations might support the development of other foundations in other domains. Similar learning experiences are in the visual and performing arts domain and the health domain in this instructional guide where students will do similar work focusing on those two domains in the *California Preschool Learning Foundations, Volume 2* (PLF, V2).

Recognize that the relationships are many and pervasive and that they cannot all be described in one class session. However, students can begin to see how the foundations are part of an integrated approach to child development.

Before you start, become familiar with the foundations, as well as the introduction and bibliographic notes for the physical development domain. It will support this work if students also have read through this domain, including the introduction, foundations, bibliographic notes, and glossary.

Note that the relation between the physical development domain and the English-language development domain is explored in a separate learning experience, titled “Exploring English-language Development in the Physical Development Foundations: Critical Vocabulary.” This is because the structure of the English-language development domain is different from all the other domains and requires some groundwork in that structure before looking across domains.

Handout 1 is provided with this learning experience. An electronic version of the handout will be available when this instructional guide is online at www.wested.org/facultyinitiative.

You will need a copy of the *California Preschool Learning Foundations, Volume 1* and the *California Preschool Curriculum Framework, Volume 1* for this learning experience.

Information Delivery

Before class, assign students to read the physical development domain on pages 37-69 from the *California Preschool Learning Foundations, Volume 2*. Be sure they read the introduction and the bibliographic notes and understand the strands, substrands, and foundations and structure of the

Physical Development Domain:
Exploring the Relationships of the Foundations in the Physical Development Domain to Foundations in Other Domains

substrands. You may choose to review them as a class.

Integrated learning is addressed as one of the eight overarching principles that guided the development of the California Department of Education's *California Preschool Curriculum Framework*. On page 6 of Volume 1 of the framework, there is a short summary about the importance of understanding that young children's development is integrated. Review this with your students, and let them know that they will be looking at some of that integrated development.

Active Learning

Getting it started

Let students know that, to understand how the foundations relate to understanding integrated development, they will be exploring the relationships between the strands of the physical development domain and the other domains in the *California Preschool Learning Foundations, Volume 2* (PLF, V2). In pairs or small groups, students will work with one strand of the physical development domain and consider how it might be related to one of the other domains of the PLF, V2.

Slide 2

Assign one of the three strands in the physical development domain to each pair. Then assign each pair to one of the other domains in the PLF, V2: health or visual and performing arts. Depending on time and/or the number of students, you could assign a whole domain for comparison, or you could assign strands or even substrands. However, students will have fewer opportunities to find relationships if you assign strands or substrands. Provide them with Handout 1 that accompanies this learning experience.

Ask each pair to think about the foundations in their physical development strand and consider what foundations in their assigned domain would support or be required for development of skills in their assigned strand. For example, how would injury prevention be related to body awareness, or how could music skills be related to locomotor skills?

After the students have worked on their strands for a while, if you have the time you can rotate the strands of the physical development domain to new pairs and also rotate the other two domains so that students are working with a strand and/or a domain they did not work with previously.

Slide 3

Putting it together

When students have had time to generate some relationships, reconvene as a large group and lead a discussion with the following questions:

Online Options

Students can respond in writing to questions online.

- Where was it easy? Were there some that seemed almost the same? Where did you find strong relationships?
- Where was it hard to see relationships? Are there some that just are not connected? What does this suggest?

Taking it further

There are some ways that you can help students see the scope of these relationships. You could develop a master matrix with the relationships displayed for all three strands of the physical development

domain. This could duplicate the handouts used by the students but on a larger scale. You would need a matrix for visual and performing arts and one for health. This could be done with chart paper, a whiteboard, or electronically. Whatever way it is done, it will be important to duplicate the matrix and make it available to students as a resource for curriculum planning.

Online Options

Develop an online matrix of domain relationships. This could be enhanced as students work through other domains.

Another approach/way

You could expand this to look at the relationship between the physical development domain and domains in the *California Preschool Learning Foundations*, Volume 1.

A handout is not provided for these comparisons, but students could develop their own based on the way it was done here for just the domains in Volume 2. This could also be done as an in-class experience.

Reflection

Students can reflect on this learning experience individually or through a group discussion by responding to these questions:

Slide 4

- What stood out for you today?
- Where were there challenges for you?
- Is there further information you need to strengthen your understanding of these relationships?
- If so, how can you find that information?

Looking for Relationships Across Domains: Physical Development and Visual and Performing Arts

Which skills (foundations) in the visual and performing arts would support or be required for development of skills in the physical development domain?

| Physical Development Strands ↓ | Visual and Performing Arts Domain: Visual Art • Notice, Respond, and Engage • Develop Skills in Visual Art • Create, Invent, and Express Through Visual Art | Visual and Performing Arts Domain: Music • Notice, Respond, and Engage • Develop Skills in Music • Create, Invent, and Express Through Music | Visual and Performing Arts Domain: Drama • Notice, Respond, and Engage • Develop Skills to Create, Invent, and Express Through Drama | Visual and Performing Arts Domain: Dance • Notice, Respond, and Engage • Develop Skills in Dance • Create, Invent, and Express Through Dance |

Physical Development:

Exploring English-language Development in the Physical Development Foundations: Critical Vocabulary

Focus Statement

Students develop critical vocabulary words or phrases for focus and emphasis as they consider supporting development in the physical development domain for young children who are English learners.

Curriculum Alignment Project (CAP) Student Learning Outcomes

The Curriculum Alignment Project's (CAP) lower division eight courses and student learning outcomes are mapped onto each instructional guide learning experience. See Appendix A for the specific student learning outcomes, objectives, and examples of course content and topics for the courses listed below.

- Child Growth and Development
- Introduction to Curriculum
- Principles and Practices of Teaching Young Children
- Observation and Assessment
- Teaching in a Diverse Society
- Practicum-Field Experience

Instructional Methodologies

- Lecture
- Pairs or small group work
- Reflection—individual or large group
- Reflective discussion—large group

California Early Childhood Educator Competency Areas to Consider

The Faculty Initiative Project will be undertaking a comprehensive process in the future to map the content of the instructional guides to the California Department of Education, Child Development Division's California Early Childhood Educator Competencies. "The Competency Areas to Consider" below are listed in this instructional guide as a preliminary exploration of how

particular competency areas might be addressed through these learning experiences.

- Child Development and Learning
- Culture, Diversity, and Equity
- Family and Community Engagement
- Dual-Language Development
- Special Needs and Inclusion
- Learning Environments and Curriculum

Physical Development:

Exploring English-language Development in the Physical Development Foundations: Critical Vocabulary

Before You Start

Students will be looking for ways to support children learning English as they develop skills in the physical development domain. This requires that students are familiar with the English-language development domain in Volume 1 of the *California Preschool Learning Foundations*, and this learning experience begins with learning about and/or reviewing the English-language development domain.

It is also important that they understand ways to discover and be respectful of family or cultural practices that might occur in children with whom they work. There are other learning experiences in this instructional guide, such as “Exploring the Impact of Family and Community on Children’s Physical Development” and “Communicating Understanding of the Physical Development Domain in the Contexts of Family and Culture” that can help students increase their capacity to recognize and work with different home practices in the physical development domain. You might want to do those prior to this learning experience or in tandem with it.

Handout 1 is provided with this learning experience. An electronic version of the handout will be available when this instructional guide is online at www.wested.org/facultyinitiative.

You will need a copy of the *California Preschool Learning Foundations, Volume 1* to review the English-language development domain information.

Physical Development Domain:
Exploring English-language Development in the Physical Development Foundations: Critical Vocabulary

Information Delivery

First, introduce or reacquaint students with the English-language development domain. Direct students to the English-language development domain in the *California Preschool Learning Foundations, Volume 1*. Assign the introduction to this domain, found on pages 103–111, as a reading assignment. For this learning experience, it will be important to focus on the levels in this domain. Be sure students understand the rationale for using levels, which is described on page 106, and why this domain has levels of development instead of behaviors at specific ages.

Slide 2

In class or online provide descriptions of the levels of the English-language development domain. The following statements are derived from the descriptions on pages 107–108:

Beginning Level: Children are listening and actively processing the features of the English language.

Middle Level: Children will repeat phrases that are functionally effective, increase vocabulary, and begin to combine words.

Later Level: Children will have stronger comprehension, use English to learn, use appropriate English grammar, and engage in most classroom activities in English.

Be sure students recognize how important it is that children whose home language is not English are supported in their development relating to the physical development domain. This will frequently require intentional teaching, and this learning experience is designed to help students start thinking about how to develop strategies.

Active Learning

Getting it Started

Organize students into pairs or small groups and assign each group to work with the Fundamental Movement Skills strand, the Perceptual-Motor Skills and Movement Concepts strand, or the Active Physical Play strand. You could also assign one substrand to each pair or small group of students if you have limited time for this experience. They will find these strands and their substrands and foundations summarized in the Appendix of the *California Preschool Learning Foundations, Volume 2* publication on pages 108 –110.

Slide 3

Using Handout 1 provided with this learning experience, let students know that they will be thinking of critical vocabulary in the physical development domain for children who are English learners. This vocabulary will consist of words or phrases that need to be emphasized in order to engage children who are English learners with the physical development foundations as they grow and move through the levels of learning English.

Online Options

The handout could be introduced and completed online for class discussion.

Handout 1 directs students to think of critical vocabulary or key words and phrases relating to each of the substrands. Most of these words will not be contained in the foundations themselves, but students will have to think of what children need to hear or see. For example, students will have to think through the balancing foundations and decide what key words would be important at each level of learning English. Point out that many words or phrases might not change through the levels or they might become more complex as children move through the levels. This will require some judgment and decision on the part of the students. It is important to

encourage them to write what they think of, and let them know that they will be able to explore where they had uncertainties later in discussions.

Putting It Together

Bring students back together for a discussion focused on the following questions:

- Where did you find this relatively easy to do?
- Where was it challenging?
- Did you discover foundations where modeling a skill seemed to be as important as vocabulary?
- What does this suggest about working through the physical development foundations with young children who are English learners?

Online Options

Questions could be answered online and submitted for review.

Taking it further

After students have discussed what they felt was critical vocabulary, ask if they thought of any intentional teaching strategies that could be used to support children as they learn this vocabulary. These might have come to mind as they worked through the vocabulary. You could also use this question as a second phase of the experience using the same handout.

Online Options

The completed lists for all domains could be distributed online.

Be sure you collect these handouts and develop a list of vocabulary for each substrand at each level as a resource for students.

Reflection

Students can reflect on this learning experience individually or through a group discussion by responding to these questions:

Slide 4

- What was the most important thing to you that you learned in this experience?
- Did you find areas of development or concepts that you want to strengthen in your own understanding?
- How will this influence your work now or in the future with young children?

**Developing Vocabulary in the Fundamental Movement Skills Strand
for Children Who Are English Learners**

| | Level of English Language Development | | |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <u>Beginning Level:</u> Children are listening and actively processing the features of the English language. | <u>Middle Level:</u> Children will repeat phrases that are functionally effective, increase vocabulary, and begin to combine words. | <u>Later Level:</u> Children will have stronger comprehension, use English to learn, use appropriate English grammar, and engage in most classroom activities in English. |
| Substrand: Balance | | | |
| Substrand: Locomotor skills | | | |
| Substrand: Manipulative Skills | | | |

Physical Development Domain: Exploring English-language Development in the Physical Development Foundations: Critical Vocabulary
Handout 1 – Developing Vocabulary in the Fundamental Movement Skills Strand for Children Who Are English Learners

**Developing Vocabulary in the Perceptual-Motor Skills and Movement Concepts
Strand for Children Who Are English Learners**

| | Level of English Language Development | | |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <u>Beginning Level:</u> Children are listening and actively processing the features of the English language. | <u>Middle Level:</u> Children will repeat phrases that are functionally effective, increase vocabulary, and begin to combine words. | <u>Later Level:</u> Children will have stronger comprehension, use English to learn, use appropriate English grammar, and engage in most classroom activities in English. |
| Substrand: Body Awareness | | | |
| Substrand: Spatial Awareness | | | |
| Substrand: Directional Awareness | | | |

**Developing Vocabulary in the Active Physical Play Strand
for Children Who Are English Learners**

| Level of English Language Development | | | |
|-----------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <u>Beginning Level:</u> Children are listening and actively processing the features of the English language. | <u>Middle Level:</u> Children will repeat phrases that are functionally effective, increase vocabulary, and begin to combine words. | <u>Later Level:</u> Children will have stronger comprehension, use English to learn, use appropriate English grammar, and engage in most classroom activities in English. |
| Substrand: Active Participation | | | |
| Substrand: Cardiovascular Endurance | | | |
| Substrand: Muscular Strength, Muscular Endurance, and Flexibility | | | |

Appendix A

Student Learning Outcomes and CAP Lower Division Eight Courses Mapped onto the *Instructional Guide for the California Preschool Learning Foundations, Volume 2*

To support faculty in decisions regarding how and where they can best use the *California Preschool Learning Foundations, Volume 2* in their course work or across their program, the Student Learning Outcomes (SLOs) developed by the Curriculum Alignment Project (CAP) (http://www.childddevelopment.org/cs/cdtc/print/htdocs/services_cap.htm) for the eight core lower division early childhood courses have been mapped onto each learning experience in this instructional guide for consideration. At the beginning of each learning experience the Preview of the Learning Experience will provide the list of courses that have been mapped onto the specific learning experience.

The Curriculum Alignment Project's SLOs, objectives, and examples of course content and topics indicated for this instructional guide for the *California Preschool Learning Foundations, Volume 2* are found in this Appendix A. Refer to the Student Learning Outcomes Index for an overview of this instructional guide mapping listed by domain. The location of the SLO Index is listed in the Table of Contents for this instructional guide.

These SLOs are organized by the CAP core lower division early childhood courses. This is not an exhaustive list, and faculty might find ways to use the learning experiences to address SLOs in ways other than what has been indexed. Working through these selected learning experiences does not guarantee the achievement of any student learning outcome or objective; it is understood that students achieve student outcomes through repeated engagement with information and experiences that build competence.

To assist faculty in using these SLOs as supports for decision making, the instructional guide learning experiences are indexed first by *California Preschool Learning Foundations, Volume 2* domains then by CAP courses and SLOs so that faculty can select what is most relevant to their particular needs. Student learning outcomes are matched to specific learning experiences in the instructional guide that will support attainment of that outcome. Not all student learning outcomes map onto the specific content of the instructional guide.

California State University and University of California

The Curriculum Alignment Project (CAP) course and student learning outcome (SLO) mapping with this instructional guide is done with the understanding that not all institutions will use these particular SLOs or objectives. This is particularly true for faculty at the California State University (CSU) and University of California (UC) campuses. The SLOs do provide learning outcomes that can be used selectively or with adaptations for courses at the CSU and UC campuses and indicate what can be accomplished by students through using the learning experiences in this instructional guide.

Visual and Performing Arts Domain

Visual and Performing Arts – Learning Experience 1: Connecting to Our Early Experiences with the Visual and Performing Arts

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment.
- Describe and explain biological and environmental factors influencing the development of identity and self-esteem in children of all ages.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Child, Family and Community

Student Learning Outcomes:

- Critically assess how educational, political, and socioeconomic factors directly impact the lives of children and families.

Objectives:

- Compare and contrast diverse family structures, parenting styles, culture, tradition and values and their impact upon children and youth.

Content and Topics:

- The influence of adults' personal experience and family history on relationships with children and families

Course: Introduction to Curriculum

Student Learning Outcomes:

- Evaluate the teachers' role in providing best and promising practices in early childhood programs.
- Compare and contrast play-based curriculum that supports children's cognitive, language, creative, physical and social/emotional development.

Course: Introduction to Curriculum – Continued

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches, which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.
- Discuss the role of curriculum in supporting socialization, self-regulation and self-help skills for all children.

Content and Topics:

- Curriculum planning that reflects the value and sequence of the child's ability to construct and represent her/his world through symbols
- Emergent curriculum, webbed curriculum, themes, project approach

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Objectives:

- Demonstrate awareness of developmental ages and stages.
- Describe why access to play is important for all children and ways of using a play-based curriculum as a vehicle for developing skills, dispositions, and knowledge.

Content and Topics:

- The influence of environment on behavior and learning
- The meaning of DCLAP - developmentally, culturally, linguistically appropriate practice

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Critically assess the components of linguistically and culturally relevant, inclusive, age-appropriate, anti-bias approaches in promoting optimum learning and development.

Objectives:

- Define and assess the impacts of factors such as language, ethnicity, religion, immigration, and economic class in the personal history of the student and the subsequent impact on teaching young children and families.
- Evaluate inclusive classroom environments, materials and approaches that are developmentally, culturally and linguistically appropriate to specific groups of children.

Content and Topics:

- Culturally and developmentally appropriate classrooms: curriculum, environment; human relationships

Course: Practicum-Field Experience

Student Learning Outcomes:

- Critically assess one's own teaching experiences to guide and inform practice.

Course: Practicum-Field Experience – Continued

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.
- Use and articulate current research and understanding of development and learning theories to select effective learning materials and experiences for all young children.

Content and Topics:

- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Visual and Performing Arts – Learning Experience 2: Connecting to Visual and Performing Arts in Our Communities

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment
- Examine and evaluate the role of family in facilitating children's development.

Content and Topics:

- The role and influence cultural and societal impacts

Course: Child, Family and Community

Student Learning Outcomes:

- Critically assess how educational, political, and socioeconomic factors directly impact the lives of children and families.

Objectives:

- Compare and contrast diverse family structures, parenting styles, culture, tradition and values and their impact upon children and youth.

Content and Topics:

- The influence of adults' personal experience and family history on relationships with children and families

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Course: Introduction to Curriculum – Continued

Objectives:

- Identify key ways in which the environment functions as an essential component of curriculum.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.
- Evaluate teacher behaviors for best practices reflecting current research and the impact it has on children's learning and development.

Content and Topics:

- Classroom environments that reflect the children, families, cultures and languages of the communities served
- Emergent curriculum, webbed curriculum, themes, project approach
- Art and creative development
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Analyze the relationship between observation, planning, implementation and assessment in developing effective teaching strategies and positive learning and development.

Objectives:

- Define developmentally, culturally and linguistically appropriate practice.

Content and Topics:

- Unique roles of a teacher in an early childhood setting

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Critically assess the components of linguistically and culturally relevant, inclusive, age-appropriate, anti-bias approaches in promoting optimum learning and development.

Objectives:

- Define and assess the impacts of factors such as language, ethnicity, religion, immigration, and economic class in the personal history of the student and the subsequent impact on teaching young children and families.
- Evaluate inclusive classroom environments, materials and approaches that are developmentally, culturally and linguistically appropriate to specific groups of children.

Content and Topics:

- Culturally and developmentally appropriate classrooms: curriculum, environment; human relationships

Course: Practicum-Field Experience

Student Learning Outcomes:

- Critically assess one's own teaching experiences to guide and inform practice.

Course: Practicum-Field Experience – Continued

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.
- Use and articulate current research and understanding of development and learning theories to select effective learning materials and experiences for *all* young children.

Content and Topics:

- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Visual and Performing Arts – Learning Experience 3: Piecing Together the Visual and Performing Arts Domain Content Puzzle

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine ways in which developmental domains are continuous, sequential and interrelated.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum

Student Learning Outcomes:

- Compare and contrast play-based curriculum that supports children's cognitive, language, creative, physical and social/emotional development.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.

Course: Introduction to Curriculum – Continued

Content and Topics:

- Play as the central modality of young children's learning
- The environment as teacher: balance between naturalistic and structured spaces; soft and hard space; traffic patterns; protected and open space; visual/aesthetic messages
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Objectives:

- Describe why access to play is important for all children and ways of using a play-based curriculum as a vehicle for developing skills, dispositions, and knowledge

Content and Topics:

- Play as a vehicle for development and learning

Course: Observation and Assessment

Student Learning Outcomes:

- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Visual and Performing Arts – Learning Experience 4: Exploring the Content of the Visual and Performing Arts Domain Through Vocabulary

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define, explain and apply constructivist theory in curriculum planning for young children..
- Identify key ways in which the environment functions as an essential component of curriculum.

Content and Topics:

- Play as the central modality of young children's learning
- The environment as teacher: balance between naturalistic and structured spaces; soft and hard space; traffic patterns; protected and open space; visual/aesthetic messages
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Assess early childhood settings, curriculum, and teaching strategies utilizing indicators of quality early childhood practice that support all children including those with diverse characteristics and their families.

Objectives:

- Identify and compare effective policies, practices, and environments in early childhood settings.
- Describe adaptations (programmatic, curricular and environmental strategies) needed to support children with diverse abilities and characteristics.

Course: Principles and Practices of Teaching Young Children – Continued

Content and Topics:

- The meaning of DCLAP - developmentally, culturally, linguistically appropriate practice
- Play as a vehicle for development and learning
- The influence of environment on behavior and learning

Course: Observation and Assessment

Student Learning Outcomes:

- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children
- National and State standards for learning and assessment

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Identify health, safety, and environmental risks in children's programs.
- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Identify and discuss common health and safety issues in early childhood settings.

Content and Topics:

- Common health issues (i.e. obesity, asthma, autism, allergies)

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Visual and Performing Arts – Learning Experience 5: Linking Preschool Learning Foundations and the Prekindergarten Content Standards Related to the Visual and Performing Arts

Course: Child Growth and Development

Student Learning Outcomes:

- Compare and contrast various theoretical frameworks that relate to the study of human development.
- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Demonstrate knowledge of the physical, social/emotional, cognitive and language development of children, both typical and atypical, in major developmental stages.
- Examine and evaluate the role of teachers and other professionals in facilitating children's development.

Content and Topics:

- Introduction to developmental perspective

Course: Child, Family and Community

Student Learning Outcomes:

- Critically assess how educational, political, and socioeconomic factors directly impact the lives of children and families.

Objectives:

- Demonstrate knowledge about the child as developing within a system and influenced by numerous factors of socialization.
- Demonstrate knowledge of legal requirements and ethical responsibilities of professionals working with all children and families.

Content and Topics:

- Challenges and benefits of early childhood practices that support children and families: creating partnerships, sharing knowledge and expertise, two-way communication, sharing power and decision making, acknowledging and respecting diversity, and creating networks of support

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.

Course: Introduction to Curriculum – Continued

Objectives – Continued:

- Demonstrate through written curriculum plans, familiarity with appropriate materials, equipment and teaching approaches that support optimum learning and development for all young children.
- Using current professional standards observe and document children at play and propose appropriate curriculum and possibilities for expanding children's learning in a variety of curriculum content areas.

Content and Topics:

- Collaboration: all levels of staff; teaching staff and families; across classrooms
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Describe the characteristics of effective relationships and interactions between early childhood professionals, children, families, and colleagues and examine the importance of collaboration.
- Explain child development as a profession, including ethics and professional organizations.

Content and Topics:

- Unique roles of a teacher in an early childhood setting
- Collaboration and partnerships with families, colleagues, and health care professionals—5 principles of family centered care

Course: Observation and Assessment

Student Learning Outcomes:

- Assess the value of partnerships with families and other professionals in utilizing interpretations of observational data to inform teaching responses and strategies.

Objectives:

- Compare and analyze historic and currently recognized current state and widely used assessment tools and processes.
- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Course: Health, Safety and Nutrition – Continued

Objectives:

- Compare and contrast various methods of collaboration with teachers and families to promote health and safety in settings for children ages 0-5.
- Write appropriate early childhood curriculum on the topics of health, safety, and nutrition appropriate for families and all children.

Content and Topics:

- Planning for children's health, safety, and nutrition education
- Physical fitness

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Objectives:

- Explore and define issues of cultural identity including factors such as language, ethnicity, religion, immigration, and economic class - in relationship to children, families, and early childhood settings.

Content and Topics:

- The teacher as model: self knowledge; recognition and respect for differences; responsive behaviors; acknowledgement and struggle with bias; change agent for and with children, families and colleagues

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.
- Critically assess one's own teaching experiences to guide and inform practice.

Objectives:

- Critically assess personal experiences to inform and guide future teaching and collaborative practices.
- Demonstrate professional behavior and preparation for the field of early childhood education.
- Demonstrate a professional level of competence in written and verbal expression.

Content and Topics:

- Professional and ethical conduct
- Use State Learning Standards and Tools
- Career Ladder

Visual and Performing Arts – Learning Experience 6: Using the Research Base for Understanding Children’s Development in the Visual and Performing Arts

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Objectives:

- Examine and explain how bias can influence the research process.
- Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment.
- Examine and evaluate the role of family in facilitating children’s development.

Content and Topics:

- Investigative research methods: interviews, surveys, observation; documentation, analysis, presentation of findings. Including questions of ethics, bias, and validity of research

Course: Child, Family and Community

Student Learning Outcomes:

- Synthesize and analyze research regarding social issues, changes and transitions that affect children, families, schools and communities.

Objectives:

- Compare and contrast diverse family structures, parenting styles, culture, tradition and values and their impact upon children and youth.
- Identify early childhood practices that support all children and families.

Content and Topics:

- Contemporary issues and their effect on children and families

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children’s development and acquisition of knowledge and skills.

Objectives:

- Explain verbally and in writing, the sequence of play as central to development and learning for young children.

Content and Topics:

- Role of teacher as informed, caring, thoughtful decision maker

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Identify and compare effective policies, practices, and environments in early childhood settings.
- Compare and contrast theoretical perspectives.

Content and Topics:

- Current and historic models, influences and approaches in the field of early childhood

Course: Observation and Assessment

Student Learning Outcomes:

- Critically compare the purpose, value and use of formal and informal observation and assessment strategies and ethical implications within cultural and social contexts in early childhood settings.

Objectives:

- Compare and analyze position statements of key groups including NABE and NAEYC regarding assessment and documentation.

Content and Topics:

- National and State standards for learning and assessment

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Research current health issues related to children and families.

Content and Topics:

- Promote good health with families, teachers and children involved in culturally linguistically and developmentally appropriate ways
- Physical fitness

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Critically assess the components of linguistically and culturally relevant, inclusive, age-appropriate, anti-bias approaches in promoting optimum learning and development.

Objectives:

- Explore the unique and overlapping issues in racism, sexism, classism, heterosexism, ableism, and ethnocentrism as they relate to children and to early childhood settings.

Course: Teaching in a Diverse Society – Continued

Content and Topics:

- Identification of stereotypes and biased messages in the media and in the classroom and exploration of educational approaches that teach children how to challenge such messages and develop alternative behaviors

Course: Practicum-Field Experience

Student Learning Outcomes:

- Evaluate the effectiveness of early childhood curriculum, classroom, teaching strategies and how teachers involve families in their children's development and learning to improve teaching practices for all children.

Objectives:

- Use and articulate current research and understanding of development and learning theories to select effective learning materials and experiences for *all* young children.
- Demonstrate a professional level of competence in written and verbal expression.

Content and Topics:

- Use State Learning Standards and Tools

Visual and Performing Arts – Learning Experience 7: Identifying Family and Cultural Components in the Visual and Performing Arts

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Objectives:

- Examine and evaluate the role of family in facilitating children's development.
- Identify and describe risk factors that impact families and child at each major developmental stage.

Content and Topics:

- Introduction to developmental perspective

Course: Child, Family and Community

Student Learning Outcomes:

- Critique strategies that support and empower families through respectful, reciprocal relationships to involve all families in their children's development and learning.

Objectives:

- Identify early childhood practices that support all children and families.
- Define and examine a variety of contemporary issues that influence family functioning and develop appropriate strategies to assist families experiencing stress.

Course: Child, Family and Community – Continued

Objectives – Continued:

- Demonstrate ability to implement a variety of appropriate and effective communication strategies for working with diverse and special needs populations.

Content and Topics:

- Appropriate and effective communication strategies for working with diverse and special needs populations

Course: Introduction to Curriculum

Student Learning Outcomes:

- Design and implement curriculum based on observation and assessment to support play and learning using developmental, inclusive and anti-bias principles in collaboration with families to support *all* children.

Objectives:

- Demonstrate and explain in curriculum plans the progression from simple to complex and concrete to abstract and explain how these concepts are essential for all children's learning.
- Identify various ways of engaging with children's families in curriculum planning and documenting of children's involvement and learning.

Content and Topics:

- Collaboration: all levels of staff; teaching staff and families; across classrooms
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Assess early childhood settings, curriculum, and teaching strategies utilizing indicators of quality early childhood practice that support all children including those with diverse characteristics and their families.

Objectives:

- Describe the characteristics of effective relationships and interactions between early childhood professionals, children, families, and colleagues and examine the importance of collaboration.
- Develop strategies to maintain communication and access with English language learning families and children.

Content and Topics:

- Collaboration and partnerships with families, colleagues, and health care professionals—5 principles of family centered care

Course: Observation and Assessment

Student Learning Outcomes:

- Assess the value of partnerships with families and other professionals in utilizing interpretations of observational data to inform teaching responses and strategies.

Course: Observation and Assessment – Continued

Objectives:

- Articulate the value of involving families and other professionals in the observation and assessment process for all children.

Content and Topics:

- The value of collaboration with families and other professionals

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Distinguish aspects of quality in programs for young children as related to health and safety, acknowledging the value of collaboration with families and the community.

Objectives:

- Compare and contrast various methods of collaboration with teachers and families to promote health and safety in settings for children ages 0-5.

Content and Topics:

- Physical fitness

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Objectives:

- Explore and define issues of cultural identity including factors such as language, ethnicity, religion, immigration, and economic class - in relationship to children, families, and early childhood settings.

Content and Topics:

- Teachers and families: teacher responsibility to assess power dynamics; and commitment to co-creation of anti-bias approaches

Course: Practicum-Field Experience

Student Learning Outcomes:

- Apply a variety of effective approaches, strategies and techniques supporting positive relationships with children and adults.

Objectives:

- Critically assess personal experiences to inform and guide future teaching and collaborative practices.

Content and Topics:

- Use State Learning Standards and Tools

Visual and Performing Arts – Learning Experience 8: Exploring the Influence of Community and Family on Children’s Participation in the Visual and Performing Arts

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment
- Examine and evaluate the role of family in facilitating children’s development.

Content and Topics:

- The role and influence cultural and societal impacts

Course: Child, Family and Community

Student Learning Outcomes:

- Critically assess how educational, political, and socioeconomic factors directly impact the lives of children and families.

Objectives:

- Compare and contrast diverse family structures, parenting styles, culture, tradition and values and their impact upon children and youth.

Content and Topics:

- The influence of adults’ personal experience and family history on relationships with children and families

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children’s development and acquisition of knowledge and skills.

Objectives:

- Identify key ways in which the environment functions as an essential component of curriculum.
- Apply understanding of children’s learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.
- Evaluate teacher behaviors for best practices reflecting current research and the impact it has on children’s learning and development.

Course: Introduction to Curriculum – Continued

Content and Topics:

- Classroom environments that reflect the children, families, cultures and languages of the communities served
- Emergent curriculum, webbed curriculum, themes, project approach
- Art and creative development
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Analyze the relationship between observation, planning, implementation and assessment in developing effective teaching strategies and positive learning and development.

Objectives:

- Define developmentally, culturally and linguistically appropriate practice.

Content and Topics:

- Unique roles of a teacher in an early childhood setting

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Critically assess the components of linguistically and culturally relevant, inclusive, age-appropriate, anti-bias approaches in promoting optimum learning and development.

Objectives:

- Define and assess the impacts of factors such as language, ethnicity, religion, immigration, and economic class in the personal history of the student and the subsequent impact on teaching young children and families.
- Evaluate inclusive classroom environments, materials and approaches that are developmentally, culturally and linguistically appropriate to specific groups of children.

Content and Topics:

- Culturally and developmentally appropriate classrooms: curriculum, environment; human relationships

Course: Practicum-Field Experience

Student Learning Outcomes:

- Critically assess one's own teaching experiences to guide and inform practice.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.
- Use and articulate current research and understanding of development and learning theories to select effective learning materials and experiences for *all* young children.

Course: Practicum-Field Experience – Continued

Content and Topics:

- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Visual and Performing Arts – Learning Experience 9: Exploring Examples of the Visual and Performing Arts in the Early Care and Education Setting

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Objectives:

- Demonstrate objective techniques and skills when observing, interviewing, describing and evaluating behavior in children of all ages cultures and backgrounds and their caregivers.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development
- The role and influence cultural and societal impacts

Course: Introduction to Curriculum

Student Learning Outcomes:

- Design and implement curriculum based on observation and assessment to support play and learning using developmental, inclusive and anti-bias principles in collaboration with families to support *all* children.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.
- Using current professional standards observe and document children at play and propose appropriate curriculum and possibilities for expanding children's learning in a variety of curriculum content areas.

Course: Introduction to Curriculum – Continued

Content and Topics:

- Play as the central modality of young children's learning
- Individual learning styles and modalities
- Observation and documentation as related to curriculum development
- Selecting activities, materials and equipment, meeting goals
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Objectives:

- Demonstrate awareness of developmental ages and stages.
- Describe the relationship of observation, planning, implementation, and assessment in effective programming.

Content and Topics:

- Play as a vehicle for development and learning
- The interrelationship of planning, observation, and assessment

Course: Observation and Assessment

Student Learning Outcomes:

- Critically compare the purpose, value and use of formal and informal observation and assessment strategies and ethical implications within cultural and social contexts in early childhood settings.
- Demonstrate systematic observation methods to provide data to assess the impact of the environment, interactions and curriculum on all domains of children's learning and development.

Objectives:

- Illustrate the use of observation and assessment to implement curriculum and environmental changes in support of both group and individual needs.
- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.
- Demonstrate knowledge of the role that observation and assessment play in intervention.

Content and Topics:

- National and State standards for learning and assessment
- Observation and assessment as a tool to create appropriate environments
- Portfolio collection (e.g., photos, art, writing), which makes visible children's development and learning

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Assess strategies to maximize the mental and physical health of children and adults in programs for all young children in accordance with culturally, linguistic and developmentally sound practice.

Course: Health, Safety and Nutrition – Continued

Objectives:

- Demonstrate effective strategies for evaluating health and safety policies and procedures.
- Write appropriate early childhood curriculum on the topics of health, safety, and nutrition appropriate for families and all children.

Content and Topics:

- N/A

Course: Practicum-Field Experience

Student Learning Outcomes:

- Design, implement and evaluate curriculum activities that are based on observation and assessment of young children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Authentic assessment and documentation for all children
- Use State Learning Standards and Tools

Visual and Performing Arts – Learning Experience 10: Connecting English-language Development to the Visual and Performing Arts in the Early Care and Education Setting

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze how cultural, economic, political, historical contexts affect children's development.

Objectives:

- Investigate and explain the process of bilingual development in children at various stages.

Content and Topics:

- Bilingual development and theories of language learning and bilingualism

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Course: Introduction to Curriculum – Continued

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Design curriculum plans and activities to include support of home language as well as development of English as a second language.

Content and Topics:

- Impacts of language and culture on children's play and learning
- Assessing all curriculum for access and appropriate inclusion approaches
- Innovative approaches

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Assess early childhood settings, curriculum, and teaching strategies utilizing indicators of quality early childhood practice that support all children including those with diverse characteristics and their families.

Objectives:

- Define developmentally, culturally and linguistically appropriate practice.
- Describe adaptations (programmatic, curricular and environmental strategies) needed to support children with diverse abilities and characteristics.
- Develop strategies to maintain communication and access with English language learning families and children

Content and Topics:

- The meaning of DCLAP - developmentally, culturally, linguistically appropriate practice

Course: Observation and Assessment

Student Learning Outcomes:

- Describe and evaluate the characteristics, strengths and limitations of common assessment tools with all children's developmental, cultural and linguistic characteristics.

Objectives:

- Consider the effect of social context, child's state of health and well-being, primary language, ability and environment on assessment processes.

Content and Topics:

- National and State standards for learning and assessment

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Critically assess the components of linguistically and culturally relevant, inclusive, age-appropriate, anti-bias approaches in promoting optimum learning and development.

Course: Teaching in a Diverse Society – Continued

Objectives:

- Plan classroom environments, materials and approaches to effectively promote pride in one's own identity and delight and respect for social diversity.
- Evaluate inclusive classroom environments, materials and approaches that are developmentally, culturally and linguistically appropriate to specific groups of children.

Content and Topics:

- Culturally and developmentally appropriate classrooms: curriculum, environment; human relationships

Course: Practicum-Field Experience

Student Learning Outcomes:

- Evaluate the effectiveness of early childhood curriculum, classroom, teaching strategies and how teachers involve families in their children's development and learning to improve teaching practices for all children.
- Apply a variety of effective approaches, strategies and techniques supporting positive relationships with children and adults.

Objectives:

- Plan, present and evaluate a variety of developmentally, culturally and linguistically appropriate, play-based curriculum and activities.

Content and Topics:

- Application of developmentally, culturally, linguistically appropriate practices
- Positive interactions with children and adults in primary language(s)

Visual and Performing Arts – Learning Experience 11: Exploring the Relationships of the Foundations in the Visual and Performing Arts Domain to Foundations in Other Domains

Course: Child Growth and Development

Student Learning Outcomes:

- Differentiate characteristics of typical and atypical development at various stages.

Objectives:

- Examine ways in which developmental domains are continuous, sequential and interrelated.
- Examine and evaluate the role of play and its relationship to development at various stages

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development
- The role and influence cultural and societal impacts

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.
- Compare and contrast play-based curriculum that supports children's cognitive, language, creative, physical and social/emotional development.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.

Content and Topics:

- Emergent curriculum, webbed curriculum, themes, project approach
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Analyze the relationship between observation, planning, implementation and assessment in developing effective teaching strategies and positive learning and development.

Objectives:

- Demonstrate awareness of developmental ages and stages.
- Describe the relationship of observation, planning, implementation, and assessment in effective programming.

Content and Topics:

- The interrelationship of planning, observation, and assessment

Course: Observation and Assessment

Student Learning Outcomes:

- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Demonstrate and apply knowledge of developmental domains to interpretations of observations.

Content and Topics:

- Appropriate procedures of child observation

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Course: Practicum-Field Experience – Continued

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Integration across curriculum and in collaboration w/team
- Use State Learning Standards and Tools

Visual and Performing Arts – Learning Experience 12: Exploring Across Domains as Visual and Performing Artists

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.
- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine ways in which developmental domains are continuous, sequential and interrelated.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define, explain and apply constructivist theory in curriculum planning for young children.
- Identify key ways in which the environment functions as an essential component of curriculum.

Content and Topics:

- Play as the central modality of young children's learning
- The environment as teacher: balance between naturalistic and structured spaces; soft and hard space; traffic patterns; protected and open space; visual/aesthetic messages
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Assess early childhood settings, curriculum, and teaching strategies utilizing indicators of quality early childhood practice that support all children including those with diverse characteristics and their families.
- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Objectives:

- Describe adaptations (programmatic, curricular and environmental strategies) needed to support children with diverse abilities and characteristics.
- Describe why access to play is important for all children and ways of using a play based curriculum as a vehicle for developing skills, dispositions, and knowledge

Content and Topics:

- The meaning of DCLAP - developmentally, culturally, linguistically appropriate practice
- Play as a vehicle for development and learning
- The influence of environment on behavior and learning

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Physical Development Domain

Physical Development – Learning Experience 1: Connecting to the Foundations in the Physical Development Domain by Experiencing Them

Course: Child Growth and Development

Student Learning Outcomes:

- Differentiate characteristics of typical and atypical development at various stages.

Objectives:

- Examine ways in which developmental domains are continuous, sequential and interrelated.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Observations applying theory and developmental norms to various ages

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define how curriculum plans can be modified for inclusion of children with special needs.
- Identify various ways of engaging with children's families in curriculum planning and documenting of children's involvement and learning.

Content and Topics:

- Individual learning styles and modalities
- State standards, desired results, foundations, frameworks
- Formal assessment tools

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Analyze the relationship between observation, planning, implementation and assessment in developing effective teaching strategies and positive learning and development.

Objectives:

- Demonstrate awareness of developmental ages and stages.

Content and Topics:

- Applying developmentally-appropriate practices to normative and atypical development
- Attention to unique needs of children ages of 0 to 3, preschool aged and in after school care

Course: Observation and Assessment

Student Learning Outcomes:

- Critically compare the purpose, value and use of formal and informal observation and assessment strategies and ethical implications within cultural and social contexts in early childhood settings.
- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Use observation tools to identify patterns, trends and anomalies in individuals and groups of children (e.g., DRDP-R, Ages and Stages).
- Illustrate the use of observation and assessment to implement curriculum and environmental changes in support of both group and individual needs.
- Demonstrate and apply knowledge of developmental domains to interpretations of observations.
- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children
- Various methods of documentation and recordkeeping
- National and State standards for learning and assessment

Course: Practicum-Field Experience

Student Learning Outcomes:

- Design, implement and evaluate curriculum activities that are based on observation and assessment of young children.

Objectives:

- Develop a recordkeeping system to document and track children's progress.

Content and Topics:

- Authentic assessment and documentation for all children
- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Physical Development – Learning Experience 2: Connecting to Our Experiences with Physical Activity in Natural Settings

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Course: Child Growth and Development – Continued

Objectives:

- Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Child, Family and Community

Student Learning Outcomes:

- Critically assess community support services and agencies that are available to community and families.

Objectives:

- Demonstrate the ability to identify and analyze risk factors and/or problems and recommend appropriate community resources.
- Develop advocacy strategies to affect public attitudes and policy.

Content and Topics:

- Advocacy strategies to influence public policy on behalf of children and families

Course: Introduction to Curriculum

Student Learning Outcomes:

- Compare and contrast play-based curriculum that supports children's cognitive, language, creative, physical and social/emotional development.

Objectives:

- Identify key ways in which the environment functions as an essential component of curriculum.
- Identify various ways of engaging with children's families in curriculum planning and documenting of children's involvement and learning.

Content and Topics:

- Play as the central modality of young children's learning
- Individual learning styles and modalities
- The environment as teacher: balance between naturalistic and structured spaces; soft and hard space; traffic patterns; protected and open space; visual/aesthetic messages

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Course: Principles and Practices of Teaching Young Children – Continued

Objectives:

- List different program types, delivery systems, and licensing and regulation structures in early childhood settings.

Content and Topics:

- Addressing the needs of the whole child
- Play as a vehicle for development and learning
- Essentials of program planning

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Identify health, safety, and environmental risks in children's programs.

Objectives:

- Research current health issues related to children and families.
- Review laws and regulations (e.g., Title 22, Title 5, Fire Code) supporting health, safety, and nutrition in children's programs.

Content and Topics:

- Physical fitness

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Evaluate the impact of personal experiences and social identity on teaching effectiveness.

Objectives:

- Evaluate inclusive classroom environments, materials and approaches that are developmentally, culturally and linguistically appropriate to specific groups of children.

Content and Topics:

- Environments and curriculums that reflect children's cultures and experiences and that expose children to the larger communities in which they live

Course: Practicum-Field Experience

Student Learning Outcomes:

- Evaluate the effectiveness of early childhood curriculum, classroom, teaching strategies and how teachers involve families in their children's development and learning to improve teaching practices for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Organization of space, time, materials and children's groupings
- Use State Learning Standards and Tools

Physical Development – Learning Experience 3: Piecing Together the Physical Development Domain Content Puzzle

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine ways in which developmental domains are continuous, sequential and interrelated.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum

Student Learning Outcomes:

- Compare and contrast play-based curriculum that supports children's cognitive, language, creative, physical and social/emotional development.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.

Content and Topics:

- Play as the central modality of young children's learning
- The environment as teacher: balance between naturalistic and structured spaces; soft and hard space; traffic patterns; protected and open space; visual/aesthetic messages
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Objectives:

- Describe why access to play is important for all children and ways of using a play-based curriculum as a vehicle for developing skills, dispositions, and knowledge

Course: Principles and Practices of Teaching Young Children – Continued

Content and Topics:

- Play as a vehicle for development and learning

Course: Observation and Assessment

Student Learning Outcomes:

- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children
- National and State standards for learning and assessment

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Physical Development – Learning Experience 4: Demonstrating the Content of the Physical Development Domain

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine ways in which developmental domains are continuous, sequential and interrelated.
- Examine and evaluate the role of play and its relationship to development at various stages.

Course: Child Growth and Development – Continued**Content and Topics:**

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum**Student Learning Outcomes:**

- Compare and contrast play-based curriculum that supports children's cognitive, language, creative, physical and social/emotional development.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.

Content and Topics:

- Play as the central modality of young children's learning
- The environment as teacher: balance between naturalistic and structured spaces; soft and hard space; traffic patterns; protected and open space; visual/aesthetic messages
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Objectives:

- Describe why access to play is important for all children and ways of using a play-based curriculum as a vehicle for developing skills, dispositions, and knowledge

Content and Topics:

- Play as a vehicle for development and learning

Course: Observation and Assessment**Student Learning Outcomes:**

- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Course: Observation and Assessment – Continued**Content and Topics:**

- Identify differences in development and skills among children
- National and State standards for learning and assessment

Course: Practicum-Field Experience**Student Learning Outcomes:**

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

**Physical Development – Learning Experience 5:
Exploring the Content of the Physical Development Domain Through
Vocabulary**

Course: Child Growth and Development**Student Learning Outcomes:**

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum**Student Learning Outcomes:**

- Compare and contrast play-based curriculum that supports children's cognitive, language, creative, physical and social/emotional development.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.

Course: Introduction to Curriculum – Continued**Objectives – Continued:**

- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.

Content and Topics:

- Play as the central modality of young children's learning
- The environment as teacher: balance between naturalistic and structured spaces; soft and hard space; traffic patterns; protected and open space; visual/aesthetic messages
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Objectives:

- Describe why access to play is important for all children and ways of using a play-based curriculum as a vehicle for developing skills, dispositions, and knowledge.

Content and Topics:

- Play as a vehicle for development and learning

Course: Observation and Assessment**Student Learning Outcomes:**

- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children
- National and State standards for learning and assessment

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Identify health, safety, and environmental risks in children's programs.
- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Identify and discuss common health and safety issues in early childhood settings.

Content and Topics:

- Common health issues (i.e. obesity, asthma, autism, allergies)

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Physical Development – Learning Experience 6: Exploring the Research and Rationale for the Physical Development Domain

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Objectives:

- Examine and explain how bias can influence the research process.
- Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment.
- Examine and evaluate the role of family in facilitating children's development.
- Examine and evaluate the role of teachers and other professionals in facilitating children's development.

Content and Topics:

- Investigative research methods: interviews, surveys, observation; documentation, analysis, presentation of findings. Including questions of ethics, bias, and validity of research

Course: Child, Family and Community

Student Learning Outcomes:

- Synthesize and analyze research regarding social issues, changes and transitions that affect children, families, schools and communities.

Objectives:

- Compare and contrast diverse family structures, parenting styles, culture, tradition and values and their impact upon children and youth.
- Identify early childhood practices that support all children and families.

Course: Child, Family and Community – Continued

Content and Topics:

- Contemporary issues and their effect on children and families

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Explain verbally and in writing, the sequence of play as central to development and learning for young children.

Content and Topics:

- Role of teacher as informed, caring, thoughtful decision maker

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Identify and compare effective policies, practices, and environments in early childhood settings.
- Compare and contrast theoretical perspectives.

Content and Topics:

- Current and historic models, influences and approaches in the field of early childhood

Course: Observation and Assessment

Student Learning Outcomes:

- Critically compare the purpose, value and use of formal and informal observation and assessment strategies and ethical implications within cultural and social contexts in early childhood settings.

Objectives:

- Compare and analyze position statements of key groups including NABE and NAEYC regarding assessment and documentation.

Content and Topics:

- National and State standards for learning and assessment

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Course: Health, Safety and Nutrition – Continued

Objectives:

- Research current health issues related to children and families.

Content and Topics:

- Promote good health with families, teachers and children involved in culturally linguistically and developmentally appropriate ways
- Physical fitness

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Critically assess the components of linguistically and culturally relevant, inclusive, age-appropriate, anti-bias approaches in promoting optimum learning and development.

Objectives:

- Explore the unique and overlapping issues in racism, sexism, classism, heterosexism, ableism, and ethnocentrism as they relate to children and to early childhood settings.

Content and Topics:

- Identification of stereotypes and biased messages in the media and in the classroom and exploration of educational approaches that teach children how to challenge such messages and develop alternative behaviors

Course: Practicum-Field Experience

Student Learning Outcomes:

- Evaluate the effectiveness of early childhood curriculum, classroom, teaching strategies and how teachers involve families in their children's development and learning to improve teaching practices for all children.

Objectives:

- Use and articulate current research and understanding of development and learning theories to select effective learning materials and experiences for *all* young children.
- Demonstrate a professional level of competence in written and verbal expression.

Content and Topics:

- Use State Learning Standards and Tools

Physical Development – Learning Experience 7: Linking Preschool Learning Foundations and the Kindergarten Content Standards Related to Physical Development

Course: Child Growth and Development

Student Learning Outcomes:

- Compare and contrast various theoretical frameworks that relate to the study of human development.

Course: Child Growth and Development – Continued

Student Learning Outcomes – Continued:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Demonstrate knowledge of the physical, social/emotional, cognitive and language development of children, both typical and atypical, in major developmental stages.
- Examine and evaluate the role of teachers and other professionals in facilitating children's development.

Content and Topics:

- Introduction to developmental perspective

Course: Child, Family and Community

Student Learning Outcomes:

- Critically assess how educational, political, and socioeconomic factors directly impact the lives of children and families.

Objectives:

- Demonstrate knowledge about the child as developing within a system and influenced by numerous factors of socialization.
- Demonstrate knowledge of legal requirements and ethical responsibilities of professionals working with all children and families.

Content and Topics:

- Challenges and benefits of early childhood practices that support children and families: creating partnerships, sharing knowledge and expertise, two-way communication, sharing power and decision making, acknowledging and respecting diversity, and creating networks of support

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Demonstrate through written curriculum plans, familiarity with appropriate materials, equipment and teaching approaches that support optimum learning and development for all young children.
- Using current professional standards observe and document children at play and propose appropriate curriculum and possibilities for expanding children's learning in a variety of curriculum content areas.

Course: Introduction to Curriculum – Continued**Content and Topics:**

- Collaboration: all levels of staff; teaching staff and families; across classrooms
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Describe the characteristics of effective relationships and interactions between an early childhood professionals, children, families, and colleagues and examine the importance of collaboration.
- Explain child development as a profession, including ethics and professional organizations.

Content and Topics:

- Unique roles of a teacher in an early childhood setting
- Collaboration and partnerships with families, colleagues, and health care professionals—5 principles of family centered care

Course: Observation and Assessment**Student Learning Outcomes:**

- Assess the value of partnerships with families and other professionals in utilizing interpretations of observational data to inform teaching responses and strategies.

Objectives:

- Compare and analyze historic and currently recognized current state and widely-used assessment tools and processes.
- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children
- National and State standards for learning and assessment

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Compare and contrast various methods of collaboration with teachers and families to promote health and safety in settings for children ages 0-5.
- Write appropriate early childhood curriculum on the topics of health, safety, and nutrition appropriate for families and all children.

Course: Health, Safety and Nutrition – Continued

Content and Topics:

- Planning for children's health, safety, and nutrition education
- Physical fitness

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Objectives:

- Explore and define issues of cultural identity including factors such as language, ethnicity, religion, immigration, and economic class - in relationship to children, families, and early childhood settings.

Content and Topics:

- The teacher as model: self knowledge; recognition and respect for differences; responsive behaviors; acknowledgement and struggle with bias; change agent for and with children, families and colleagues

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.
- Critically assess one's own teaching experiences to guide and inform practice.

Objectives:

- Critically assess personal experiences to inform and guide future teaching and collaborative practices.
- Demonstrate professional behavior and preparation for the field of early childhood education.
- Demonstrate a professional level of competence in written and verbal expression.

Content and Topics:

- Professional and ethical conduct
- Use State Learning Standards and Tools
- Career Ladder

**Physical Development – Learning Experience 8:
Exploring the Impact of Family and Community on Children's Physical
Development**

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze how cultural, economic, political, historical contexts affect children's development.

Course: Child Growth and Development – Continued

Objectives:

- Examine and evaluate the role of family in facilitating children's development.
- Examine and evaluate the role of teachers and other professionals in facilitating children's development.
- Identify and describe risk factors that impact families and child at each major developmental stage.

Content and Topics:

- The role and influence of family and caregivers
- The role and influence cultural and societal impacts

Course: Child, Family and Community

Student Learning Outcomes:

- Analyze one's own values, goals and sense of self as related to family history and life experiences, assessing how this impacts relationships with children and families.

Objectives:

- Explain and interpret the impact of socioeconomic factors on children and families, particularly in the area of work, childcare, single parent families, health poverty.
- Identify stereotypes and assumptions that affect attitudes and actions within the family, the culture and the professional community.
- Identify early childhood practices that support all children and families.
- Explore one's own family history and examine how it affects relationships with children and families.

Content and Topics:

- The role of family: values, traditions, modes of interaction, rules, conventions, responsibilities, change, transitions, and family dynamics
- Socioeconomic factors that impact children and families: work, childcare, single parent families, poverty, incarceration, health, etc.

Course: Introduction to Curriculum

Student Learning Outcomes:

- Design and implement curriculum based on observation and assessment to support play and learning using developmental, inclusive and anti-bias principles in collaboration with families to support *all* children.

Objectives:

- Identify various ways of engaging with children's families in curriculum planning and documenting of children's involvement and learning.

Content and Topics:

- Collaboration: all levels of staff; teaching staff and families; across classrooms

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Assess early childhood settings, curriculum, and teaching strategies utilizing indicators of quality early childhood practice that support all children including those with diverse characteristics and their families.

Objectives:

- Describe the characteristics of effective relationships and interactions between early childhood professionals, children, families, and colleagues and examine the importance of collaboration.

Content and Topics:

- Collaboration and partnerships with families, colleagues, and health care professionals—5 principles of family centered care

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Identify environmental health and safety risks for children ages 0-5.

Content and Topics:

- Promote good health with families, teachers and children involved in culturally linguistically and developmentally appropriate ways
- Physical fitness

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Objectives:

- Explore and define issues of cultural identity including factors such as language, ethnicity, religion, immigration, and economic class - in relationship to children, families, and early childhood settings.
- Describe a variety of strategies for creating partnerships with parents through building mutual, collaborative relationships, and to challenge bias and injustice in the lives of their children.

Content and Topics:

- The nature of systemic and internalized oppression and privilege and the subsequent impacts on children's identity development and learning

Course: Practicum-Field Experience

Student Learning Outcomes:

- Evaluate the effectiveness of early childhood curriculum, classroom, teaching strategies and how teachers involve families in their children's development and learning to improve teaching practices for all children.

Objectives:

- Critically assess personal experiences to inform and guide future teaching and collaborative practices.

Content and Topics:

- Use State Learning Standards and Tools

Physical Development – Learning Experience 9: Communicating Understanding of the Physical Development Domain in the Contexts of Family and Culture

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Objectives:

- Examine and evaluate the role of family in facilitating children's development.
- Identify and describe risk factors that impact families and child at each major developmental stage.

Content and Topics:

- Introduction to developmental perspective

Course: Child, Family and Community

Student Learning Outcomes:

- Critique strategies that support and empower families through respectful, reciprocal relationships to involve all families in their children's development and learning.

Objectives:

- Identify early childhood practices that support all children and families.
- Define and examine a variety of contemporary issues that influence family functioning and develop appropriate strategies to assist families experiencing stress.
- Demonstrate ability to implement a variety of appropriate and effective communication strategies for working with diverse and special needs populations.

Content and Topics:

- Appropriate and effective communication strategies for working with diverse and special needs populations

Course: Introduction to Curriculum

Student Learning Outcomes:

- Design and implement curriculum based on observation and assessment to support play and learning using developmental, inclusive and anti-bias principles in collaboration with families to support *all* children.

Objectives:

- Demonstrate and explain in curriculum plans the progression from simple to complex and concrete to abstract and explain how these concepts are essential for all children's learning.
- Identify various ways of engaging with children's families in curriculum planning and documenting of children's involvement and learning.

Content and Topics:

- Collaboration: all levels of staff; teaching staff and families; across classrooms
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Assess early childhood settings, curriculum, and teaching strategies utilizing indicators of quality early childhood practice that support all children including those with diverse characteristics and their families.

Objectives:

- Describe the characteristics of effective relationships and interactions between early childhood professionals, children, families, and colleagues and examine the importance of collaboration.
- Develop strategies to maintain communication and access with English language learning families and children.

Content and Topics:

- Collaboration and partnerships with families, colleagues, and health care professionals—5 principles of family centered care

Course: Observation and Assessment

Student Learning Outcomes:

- Assess the value of partnerships with families and other professionals in utilizing interpretations of observational data to inform teaching responses and strategies.

Objectives:

- Articulate the value of involving families and other professionals in the observation and assessment process for all children.

Content and Topics:

- The value of collaboration with families and other professionals
- National and State standards for learning and assessment

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Distinguish aspects of quality in programs for young children as related to health and safety, acknowledging the value of collaboration with families and the community.

Objectives:

- Compare and contrast various methods of collaboration with teachers and families to promote health and safety in settings for children ages 0-5.

Content and Topics:

- Physical fitness

Course: Teaching in a Diverse Society**Student Learning Outcomes:**

- Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Objectives:

- Explore and define issues of cultural identity including factors such as language, ethnicity, religion, immigration, and economic class - in relationship to children, families, and early childhood settings.

Content and Topics:

- Teachers and families: teacher responsibility to assess power dynamics; and commitment to co-creation of anti-bias approaches

Course: Practicum-Field Experience**Student Learning Outcomes:**

- Apply a variety of effective approaches, strategies and techniques supporting positive relationships with children and adults.

Objectives:

- Critically assess personal experiences to inform and guide future teaching and collaborative practices.

Content and Topics:

- Use State Learning Standards and Tools

**Physical Development – Learning Experience 10:
Exploring Examples of the Physical Development Domain****Course: Child Growth and Development****Student Learning Outcomes:**

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Course: Child Growth and Development – Continued

Objectives:

- Demonstrate objective techniques and skills when observing, interviewing, describing and evaluating behavior in children of all ages cultures and backgrounds and their caregivers.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum

Student Learning Outcomes:

- Design and implement curriculum based on observation and assessment to support play and learning using developmental, inclusive and anti-bias principles in collaboration with families to support *all* children.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.
- Using current professional standards observe and document children at play and propose appropriate curriculum and possibilities for expanding children's learning in a variety of curriculum content areas.

Content and Topics:

- Play as the central modality of young children's learning
- Individual learning styles and modalities
- Observation and documentation as related to curriculum development
- Selecting activities, materials and equipment, meeting goals
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Objectives:

- Demonstrate awareness of developmental ages and stages.
- Describe the relationship of observation, planning, implementation, and assessment in effective programming.

Content and Topics:

- Play as a vehicle for development and learning
- The interrelationship of planning, observation, and assessment

Course: Observation and Assessment

Student Learning Outcomes:

- Critically compare the purpose, value and use of formal and informal observation and assessment strategies and ethical implications within cultural and social contexts in early childhood settings.
- Demonstrate systematic observation methods to provide data to assess the impact of the environment, interactions and curriculum on all domains of children's learning and development.

Objectives:

- Illustrate the use of observation and assessment to implement curriculum and environmental changes in support of both group and individual needs.
- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.
- Demonstrate knowledge of the role that observation and assessment play in intervention.

Content and Topics:

- National and State standards for learning and assessment
- Observation and assessment as a tool to create appropriate environments
- Portfolio collection (e.g., photos, art, writing), which makes visible children's development and learning

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Assess strategies to maximize the mental and physical health of children and adults in programs for all young children in accordance with culturally, linguistic and developmentally sound practice.

Objectives:

- Demonstrate effective strategies for evaluating health and safety policies and procedures.
- Write appropriate early childhood curriculum on the topics of health, safety, and nutrition appropriate for families and all children.

Content and Topics:

- N/A

Course: Practicum-Field Experience

Student Learning Outcomes:

- Design, implement and evaluate curriculum activities that are based on observation and assessment of young children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Course: Practicum-Field Experience – Continued

Content and Topics:

- Authentic assessment and documentation for all children
- Use State Learning Standards and Tools

Physical Development – Learning Experience 11: Physical Development in the Early Care and Education Setting: Exploring Images

Course: Child Growth and Development

Student Learning Outcomes:

- Differentiate characteristics of typical and atypical development at various stages.

Objectives:

- Examine ways in which developmental domains are continuous, sequential and interrelated.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Observations applying theory and developmental norms to various ages

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define how curriculum plans can be modified for inclusion of children with special needs.
- Identify various ways of engaging with children's families in curriculum planning and documenting of children's involvement and learning.

Content and Topics:

- Individual learning styles and modalities
- State standards, desired results, foundations, frameworks
- Formal assessment tools

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Analyze the relationship between observation, planning, implementation and assessment in developing effective teaching strategies and positive learning and development.

Objectives:

- Demonstrate awareness of developmental ages and stages.

Content and Topics:

- Applying developmentally-appropriate practices to normative and atypical development
- Attention to unique needs of children ages of 0 to 3, preschool aged and in after school care

Course: Observation and Assessment

Student Learning Outcomes:

- Critically compare the purpose, value and use of formal and informal observation and assessment strategies and ethical implications within cultural and social contexts in early childhood settings.
- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Use observation tools to identify patterns, trends and anomalies in individuals and groups of children (e.g., DRDP-R, Ages and Stages).
- Illustrate the use of observation and assessment to implement curriculum and environmental changes in support of both group and individual needs.
- Demonstrate and apply knowledge of developmental domains to interpretations of observations.
- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children
- Various methods of documentation and recordkeeping
- Appropriate procedures of child observation
- National and State standards for learning and assessment

Course: Practicum-Field Experience

Student Learning Outcomes:

- Design, implement and evaluate curriculum activities that are based on observation and assessment of young children.

Objectives:

- Develop a recordkeeping system to document and track children's progress.

Content and Topics:

- Authentic assessment and documentation for all children
- Developmental Domains-Social, Emotional, Cognitive, Creative, Language and Physical
- Use State Learning Standards and Tools

Physical Development – Learning Experience 12: Exploring the Relationships of the Foundations in the Physical Development Domain to Foundations in Other Domains

Course: Child Growth and Development

Student Learning Outcomes:

- Differentiate characteristics of typical and atypical development at various stages.

Course: Child Growth and Development – Continued**Objectives:**

- Examine ways in which developmental domains are continuous, sequential and interrelated.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development
- The role and influence of family and caregivers
- The role and influence of cultural and cultural impacts

Course: Introduction to Curriculum**Student Learning Outcomes:**

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.
- Compare and contrast play-based curriculum that supports children's cognitive, language, creative, physical and social/emotional development.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.

Content and Topics:

- Emergent curriculum, webbed curriculum, themes, project approach
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Analyze the relationship between observation, planning, implementation and assessment in developing effective teaching strategies and positive learning and development.

Objectives:

- Demonstrate awareness of developmental ages and stages.
- Describe the relationship of observation, planning, implementation, and assessment in effective programming.

Content and Topics:

- The interrelationship of planning, observation, and assessment

Course: Observation and Assessment

Student Learning Outcomes:

- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Demonstrate and apply knowledge of developmental domains to interpretations of observations.

Content and Topics:

- Appropriate procedures of child observation.
- National and State standards for learning and assessment

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Integration across curriculum and in collaboration w/team
- Use State Learning Standards and Tools

Physical Development – Learning Experience 13: Exploring English-language Development in the Physical Development Foundations: Critical Vocabulary

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze how cultural, economic, political, historical contexts affect children's development.

Objectives:

- Investigate and explain the process of bilingual development in children at various stages.

Content and Topics:

- Bilingual development and theories of language learning and bilingualism

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Course: Introduction to Curriculum – Continued**Objectives:**

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Design curriculum plans and activities to include support of home language as well as development of English as a second language.

Content and Topics:

- Impacts of language and culture on children's play and learning
- Assessing all curriculum for access and appropriate inclusion approaches
- Innovative approaches

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Assess early childhood settings, curriculum, and teaching strategies utilizing indicators of quality early childhood practice that support all children including those with diverse characteristics and their families.

Objectives:

- Define developmentally, culturally and linguistically appropriate practice.
- Describe adaptations (programmatic, curricular and environmental strategies) needed to support children with diverse abilities and characteristics.
- Develop strategies to maintain communication and access with English language learning families and children.

Content and Topics:

- The meaning of DCLAP - developmentally, culturally, linguistically appropriate practice

Course: Observation and Assessment**Student Learning Outcomes:**

- Describe and evaluate the characteristics, strengths and limitations of common assessment tools with all children's developmental, cultural and linguistic characteristics.

Objectives:

- Consider the effect of social context, child's state of health and well-being, primary language, ability and environment on assessment processes.

Content and Topics:

- Identify differences in development and skills among children
- National and State standards for learning and assessment

Course: Teaching in a Diverse Society**Student Learning Outcomes:**

- Critically assess the components of linguistically and culturally relevant, inclusive, age-appropriate, anti-bias approaches in promoting optimum learning and development.

**Course: Teaching in a Diverse Society – Continued****Objectives:**

- Plan classroom environments, materials and approaches to effectively promote pride in one's own identity and delight and respect for social diversity.
- Evaluate inclusive classroom environments, materials and approaches that are developmentally, culturally and linguistically appropriate to specific groups of children.

Content and Topics:

- Culturally and developmentally appropriate classrooms: curriculum, environment; human relationships

Course: Practicum-Field Experience**Student Learning Outcomes:**

- Evaluate the effectiveness of early childhood curriculum, classroom, teaching strategies and how teachers involve families in their children's development and learning to improve teaching practices for all children.
- Apply a variety of effective approaches, strategies and techniques supporting positive relationships with children and adults.

Objectives:

- Plan, present and evaluate a variety of developmentally, culturally and linguistically appropriate, play-based curriculum and activities.

Content and Topics:

- Application of developmentally, culturally, linguistically appropriate practices
- Positive interactions with children and adults in primary language(s)

Health Domain

Health – Learning Experience 1: Connecting to Our Own Health Habits

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment.
- Examine and evaluate the role of teachers and other professionals in facilitating children's.
- Identify and describe risk factors that impact families and child at each major developmental stage.

Content and Topics:

- The role and influence of family and caregivers and social structures.

Course: Child, Family and Community

Student Learning Outcomes:

- Synthesize and analyze research regarding social issues, changes and transitions that affect children, families, schools and communities.
- Analyze one's own values, goals and sense of self as related to family history and life experiences, assessing how this impacts relationships with children and families.

Objectives:

- Demonstrate knowledge about the child as developing within a system and influenced by numerous factors of socialization.
- Compare and contrast diverse family structures, parenting styles, culture, tradition and values and their impact upon children and youth.
- Demonstrate the ability to identify and analyze risk factors and/or problems and recommend appropriate community resources.

Content and Topics:

- Teachers' and caregivers' influences on children and families.

Course: Introduction to Curriculum

Student Learning Outcomes:

- Evaluate the teachers' role in providing best and promising practices in early childhood programs.

Course: Introduction to Curriculum – Continued**Objectives:**

- Evaluate teacher behaviors for best practices reflecting current research and the impact it has on children's learning and development.

Content and Topics:

- Unique roles and responsibilities of a teacher in an early childhood setting.
- Role of the teacher in fostering social attitudes, values and skills
- Teacher reflection and self evaluation as essential to curriculum development
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Examine a variety of guidance and interaction strategies to increase children's social competence and promote a caring classroom community.

Objectives:

- Describe the characteristics of effective relationships and interactions between an early childhood professionals, children, families, and colleagues and examine the importance of collaboration.

Content and Topics:

- Unique roles of a teacher in an early childhood setting.

Course: Observation and Assessment**Student Learning Outcomes:**

- Assess the value of partnerships with families and other professionals in utilizing interpretations of observational data to inform teaching responses and strategies.

Objectives:

- Consider the effect of social context, child's state of health and well-being, primary language, ability and environment on assessment processes.

Content and Topics:

- How social context, health, well being, and the environment effect assessment.

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Analyze the nutritional needs of children at various ages and evaluate the relationship between healthy development and nutrition.
- Distinguish aspects of quality in programs for young children as related to health and safety, acknowledging the value of collaboration with families and the community.

Objectives:

- Identify environmental health and safety risks for children ages 0-5.

Course: Health, Safety and Nutrition – Continued

Content and Topics:

- Promote good health with families, teachers and children involved in culturally linguistically and developmentally appropriate ways
- Responsibilities of teacher as role model of best health, safety and nutrition practices

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Evaluate the impact of personal experiences and social identity on teaching effectiveness.

Objectives:

- Review professional ethics and responsibilities and legal implications of bias, prejudice and/or exclusion.

Content and Topics:

- The teacher as model: self knowledge; recognition and respect for differences; responsive behaviors; acknowledgement and struggle with bias; change agent for and with children, families and colleagues

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Model and facilitate appropriate language and social behavior with children and adults including problem solving and conflict resolution strategies.

Content and Topics:

- Positive interactions with children and adults in primary language(s)
- Professional and ethical conduct
- Use State Learning Standards and Tools

**Health – Learning Experience 2:
Mind Mapping the Health Domain to Discover Out Connections to the
Health Foundations**

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Course: Child Growth and Development – Continued**Objectives:**

- Investigate and explain sources of developmental change and reasons for disturbances in the developmental process.
- Identify and describe risk factors that impact families and child at each major developmental stage.

Content and Topics:

- The role and influence of family and caregivers

Course: Child, Family and Community**Student Learning Outcomes:**

- Critically assess how educational, political, and socioeconomic factors directly impact the lives of children and families.
- Critically assess community support services and agencies that are available to community and families.

Objectives:

- Explain and interpret the impact of socioeconomic factors on children and families, particularly in the area of work, childcare, single parent families, health, poverty.
- Demonstrate the ability to identify and analyze risk factors and/or problems and recommend appropriate community resources.

Content and Topics:

- Identify community agencies, referral systems, procedures and availability of specialized services and support for families and children
- Socioeconomic factors that impact children and families: work, childcare, single parent families, poverty, incarceration, health, etc.

Course: Introduction to Curriculum**Student Learning Outcomes:**

- Evaluate the teachers' role in providing best and promising practices in early childhood programs.

Objectives:

- Discuss the role of curriculum in supporting socialization, self-regulation and self-help skills for all children.

Content and Topics:

- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Course: Principles and Practices of Teaching Young Children – Continued

Objectives:

- Demonstrate awareness of developmental ages and stages.

Content and Topics:

- Addressing the needs of the whole child

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Identify health, safety, and environmental risks in children's programs.
- Analyze the nutritional needs of children at various ages and evaluate the relationship between healthy development and nutrition.

Objectives:

- Differentiate the nutritional needs of various ages of children and plan economical and nutritional meals and snacks based on the individual needs of children.

Content and Topics:

- Conditions affecting children's health
- Common health issues (i.e. obesity, asthma, autism, allergies)

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Evaluate the impact of personal experiences and social identity on teaching effectiveness.

Objectives:

- Identify teacher's roles and responsibilities in creating a more just world for every child.
- Define and assess the impacts of factors such as language, ethnicity, religion, immigration, and economic class in the personal history of the student and the subsequent impact on teaching young children and families.

Content and Topics:

- The teacher as model: self knowledge; recognition and respect for differences; responsive behaviors; acknowledgement and struggle with bias; change agent for and with children, families and colleagues

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Use State Learning Standards and Tools

Health – Learning Experience 3: Piecing Together the Health Domain Content Puzzle

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Objectives:

- Demonstrate knowledge of current research findings as they apply to child development.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.
- Discuss the role of curriculum in supporting socialization, self-regulation and self-help skills for all children.

Content and Topics:

- Developmental theory as it applies to curriculum development
- Nutrition and cooking
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Course: Principles and Practices of Teaching Young Children – Continued**Objectives:**

- Demonstrate awareness of developmental ages and stages.

Content and Topics:

- Attention to unique needs of children ages of 0 to 3, preschool aged and in after school care

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Analyze the nutritional needs of children at various ages and evaluate the relationship between healthy development and nutrition.
- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Differentiate the nutritional needs of various ages of children and plan economical and nutritional meals and snacks based on the individual needs of children.
- Recognize a caregiver's role and responsibility to model good health, safety and nutrition habits

Content and Topics:

- Responsibilities of teacher as role model of best health, safety and nutrition practices

Course: Practicum-Field Experience**Student Learning Outcomes:**

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Use State Learning Standards and Tools

**Health – Learning Experience 4:
Exploring the Content of the Health Domain Foundations****Course: Child Growth and Development****Student Learning Outcomes:**

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Course: Child Growth and Development – Continued**Objectives:**

- Demonstrate knowledge of current research findings as they apply to child development.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum**Student Learning Outcomes:**

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.
- Discuss the role of curriculum in supporting socialization, self-regulation and self-help skills for all children.

Content and Topics:

- Developmental theory as it applies to curriculum development
- Nutrition and cooking
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Demonstrate awareness of developmental ages and stages.

Content and Topics:

- Attention to unique needs of children ages of 0 to 3, preschool aged and in after school care

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Analyze the nutritional needs of children at various ages and evaluate the relationship between healthy development and nutrition.
- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Course: Health, Safety and Nutrition – Continued**Objectives:**

- Differentiate the nutritional needs of various ages of children and plan economical and nutritional meals and snacks based on the individual needs of children.
- Recognize a caregiver's role and responsibility to model good health, safety and nutrition habits.

Content and Topics:

- Responsibilities of teacher as role model of best health, safety and nutrition practices

Course: Practicum-Field Experience**Student Learning Outcomes:**

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Use State Learning Standards and Tools

**Health – Learning Experience 5:
Conversations about Key Content in the Health Domain****Course: Child Growth and Development****Student Learning Outcomes:**

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Objectives:

- Demonstrate knowledge of current research findings as they apply to child development.

Content and Topics:

- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Child, Family and Community**Student Learning Outcomes:**

- Analyze one's own values, goals and sense of self as related to family history and life experiences, assessing how this impacts relationships with children and families.

Course: Child, Family and Community – Continued

Objectives:

- Identify early childhood practices that support all children and families.
- Demonstrate ability to implement a variety of appropriate and effective communication strategies for working with diverse and special needs populations.

Content and Topics:

- Teachers' and caregivers' influences on children and families

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.
- Discuss the role of curriculum in supporting socialization, self-regulation and self-help skills for all children.

Content and Topics:

- Developmental theory as it applies to curriculum development
- Nutrition and cooking
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Demonstrate awareness of developmental ages and stages.

Content and Topics:

- Attention to unique needs of children ages of 0 to 3, preschool aged and in after school care

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Analyze the nutritional needs of children at various ages and evaluate the relationship between healthy development and nutrition.
- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Course: Health, Safety and Nutrition – Continued**Objectives:**

- Differentiate the nutritional needs of various ages of children and plan economical and nutritional meals and snacks based on the individual needs of children.
- Recognize a caregiver's role and responsibility to model good health, safety and nutrition habits.

Content and Topics:

- Responsibilities of teacher as role model of best health, safety and nutrition practices

Course: Teaching in a Diverse Society**Student Learning Outcomes:**

- Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Objectives:

- Define and assess the impacts of factors such as language, ethnicity, religion, immigration, and economic class in the personal history of the student and the subsequent impact on teaching young children and families.

Content and Topics:

- Children's books and media to support identity development and anti-bias thinking and represent home language, culture and traditions, stories and songs

Course: Practicum-Field Experience**Student Learning Outcomes:**

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Use State Learning Standards and Tools

**Health – Learning Experience 6:
Linking the Research and Rationale for the Health Domain to
Children's Health Issues**

Course: Child Growth and Development**Student Learning Outcomes:**

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Course: Child Growth and Development – Continued

Objectives:

- Examine and explain how bias can influence the research process.
- Examine and evaluate the importance of the early years and the effects of interaction between the individual and her/his environment.
- Examine and evaluate the role of family in facilitating children's development.
- Examine and evaluate the role of teachers and other professionals in facilitating children's development.

Content and Topics:

- Investigative research methods: interviews, surveys, observation; documentation, analysis, presentation of findings. Including questions of ethics, bias, and validity of research

Course: Child, Family and Community

Student Learning Outcomes:

- Synthesize and analyze research regarding social issues, changes and transitions that affect children, families, schools and communities.

Objectives:

- Compare and contrast diverse family structures, parenting styles, culture, tradition and values and their impact upon children and youth.
- Identify early childhood practices that support all children and families.

Content and Topics:

- Contemporary issues and their effect on children and families.

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Explain verbally and in writing, the sequence of play as central to development and learning for young children.

Content and Topics:

- Role of teacher as informed, caring, thoughtful decision maker

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Identify and compare effective policies, practices, and environments in early childhood settings.
- Compare and contrast theoretical perspectives.

**Course: Principles and Practices of Teaching Young Children – Continued****Content and Topics:**

- Current and historic models, influences and approaches in the field of early childhood

Course: Observation and Assessment**Student Learning Outcomes:**

- Critically compare the purpose, value and use of formal and informal observation and assessment strategies and ethical implications within cultural and social contexts in early childhood settings.

Objectives:

- Compare and analyze position statements of key groups including NABE and NAEYC regarding assessment and documentation.

Content and Topics:

- National and State standards for learning and assessment

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Research current health issues related to children and families.

Content and Topics:

- Promote good health with families, teachers and children involved in culturally linguistically and developmentally appropriate ways
- Physical fitness

Course: Teaching in a Diverse Society**Student Learning Outcomes:**

- Critically assess the components of linguistically and culturally relevant, inclusive, age-appropriate, anti-bias approaches in promoting optimum learning and development.

Objectives:

- Explore the unique and overlapping issues in racism, sexism, classism, heterosexism, ableism, and ethnocentrism as they relate to children and to early childhood settings.

Content and Topics:

- Identification of stereotypes and biased messages in the media and in the classroom and exploration of educational approaches that teach children how to challenge such messages and develop alternative behaviors

Course: Practicum-Field Experience

Student Learning Outcomes:

- Evaluate the effectiveness of early childhood curriculum, classroom, teaching strategies and how teachers involve families in their children's development and learning to improve teaching practices for all children.

Objectives:

- Use and articulate current research and understanding of development and learning theories to select effective learning materials and experiences for all young children.
- Demonstrate a professional level of competence in written and verbal expression.

Content and Topics:

- Use State Learning Standards and Tools

Health – Learning Experience 7: Linking the Preschool Learning Foundations and Kindergarten Content Standards Related to Health

Course: Child Growth and Development

Student Learning Outcomes:

- Compare and contrast various theoretical frameworks that relate to the study of human development.
- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Demonstrate knowledge of the physical, social/emotional, cognitive and language development of children, both typical and atypical, in major developmental stages.
- Examine and evaluate the role of teachers and other professionals in facilitating children's development.

Content and Topics:

- Introduction to developmental perspective

Course: Child, Family and Community

Student Learning Outcomes:

- Critically assess how educational, political, and socioeconomic factors directly impact the lives of children and families.

Objectives:

- Demonstrate knowledge about the child as developing within a system and influenced by numerous factors of socialization.
- Demonstrate knowledge of legal requirements and ethical responsibilities of professionals working with all children and families.

Course: Child, Family and Community – Continued**Content and Topics:**

- Challenges and benefits of early childhood practices that support children and families: creating partnerships, sharing knowledge and expertise, two-way communication, sharing power and decision making, acknowledging and respecting diversity, and creating networks of support

Course: Introduction to Curriculum**Student Learning Outcomes:**

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Demonstrate through written curriculum plans, familiarity with appropriate materials, equipment and teaching approaches that support optimum learning and development for all young children.
- Using current professional standards observe and document children at play and propose appropriate curriculum and possibilities for expanding children's learning in a variety of curriculum content areas.

Content and Topics:

- Collaboration: all levels of staff; teaching staff and families; across classrooms
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Describe the characteristics of effective relationships and interactions between early childhood professionals, children, families, and colleagues and examine the importance of collaboration.
- Explain child development as a profession, including ethics and professional organizations.

Content and Topics:

- Unique roles of a teacher in an early childhood setting
- Collaboration and partnerships with families, colleagues, and health care professionals—5 principles of family centered care

Course: Observation and Assessment**Student Learning Outcomes:**

- Assess the value of partnerships with families and other professionals in utilizing interpretations of observational data to inform teaching responses and strategies.

Course: Observation and Assessment – Continued**Objectives:**

- Compare and analyze historic and currently recognized current state and widely-used assessment tools and processes.
- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Compare and contrast various methods of collaboration with teachers and families to promote health and safety in settings for children ages 0-5.
- Write appropriate early childhood curriculum on the topics of health, safety, and nutrition appropriate for families and all children.

Content and Topics:

- Planning for children's health, safety, and nutrition education
- Physical fitness

Course: Teaching in a Diverse Society**Student Learning Outcomes:**

- Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Objectives:

- Explore and define issues of cultural identity including factors such as language, ethnicity, religion, immigration, and economic class - in relationship to children, families, and early childhood settings.

Content and Topics:

- The teacher as model: self knowledge; recognition and respect for differences; responsive behaviors; acknowledgement and struggle with bias; change agent for and with children, families and colleagues

Course: Practicum-Field Experience**Student Learning Outcomes:**

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.
- Critically assess one's own teaching experiences to guide and inform practice.

Course: Practicum-Field Experience – Continued**Objectives:**

- Critically assess personal experiences to inform and guide future teaching and collaborative practices.
- Demonstrate professional behavior and preparation for the field of early childhood education.
- Demonstrate a professional level of competence in written and verbal expression.

Content and Topics:

- Professional and ethical conduct
- Use State Learning Standards and Tools
- Career Ladder

**Health – Learning Experience 8:
Reviewing the Research and Rationale for the Health Domain****Course: Child Growth and Development****Student Learning Outcomes:**

- Compare and contrast various theoretical frameworks that relate to the study of human development.
- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Demonstrate knowledge of the physical, social/emotional, cognitive and language development of children, both typical and atypical, in major developmental stages.
- Examine and evaluate the role of teachers and other professionals in facilitating children's development.

Content and Topics:

- Introduction to developmental perspective

Course: Child, Family and Community**Student Learning Outcomes:**

- Critically assess how educational, political, and socioeconomic factors directly impact the lives of children and families.

Objectives:

- Demonstrate knowledge about the child as developing within a system and influenced by numerous factors of socialization.
- Demonstrate knowledge of legal requirements and ethical responsibilities of professionals working with all children and families.

Course: Child, Family and Community – Continued**Content and Topics:**

- Challenges and benefits of early childhood practices that support children and families: creating partnerships, sharing knowledge and expertise, two-way communication, sharing power and decision making, acknowledging and respecting diversity, and creating networks of support

Course: Introduction to Curriculum**Student Learning Outcomes:**

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Demonstrate through written curriculum plans, familiarity with appropriate materials, equipment and teaching approaches that support optimum learning and development for all young children.
- Using current professional standards observe and document children at play and propose appropriate curriculum and possibilities for expanding children's learning in a variety of curriculum content areas.

Content and Topics:

- Collaboration: all levels of staff; teaching staff and families; across classrooms
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Describe the characteristics of effective relationships and interactions between early childhood professionals, children, families, and colleagues and examine the importance of collaboration.
- Explain child development as a profession, including ethics and professional organizations.

Content and Topics:

- Unique roles of a teacher in an early childhood setting
- Collaboration and partnerships with families, colleagues, and health care professionals—5 principles of family centered care

Course: Observation and Assessment**Student Learning Outcomes:**

- Assess the value of partnerships with families and other professionals in utilizing interpretations of observational data to inform teaching responses and strategies.

Course: Observation and Assessment – Continued**Objectives:**

- Compare and analyze historic and currently recognized current state and widely-used assessment tools and processes.
- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.

Content and Topics:

- Identify differences in development and skills among children

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Compare and contrast various methods of collaboration with teachers and families to promote health and safety in settings for children ages 0-5.
- Write appropriate early childhood curriculum on the topics of health, safety, and nutrition appropriate for families and all children.

Content and Topics:

- Planning for children's health, safety, and nutrition education
- Physical fitness

Course: Teaching in a Diverse Society**Student Learning Outcomes:**

- Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Objectives:

- Explore and define issues of cultural identity including factors such as language, ethnicity, religion, immigration, and economic class - in relationship to children, families, and early childhood settings.

Content and Topics:

- The teacher as model: self knowledge; recognition and respect for differences; responsive behaviors; acknowledgement and struggle with bias; change agent for and with children, families and colleagues

Course: Practicum-Field Experience**Student Learning Outcomes:**

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.
- Critically assess one's own teaching experiences to guide and inform practice.

Course: Practicum-Field Experience – Continued**Objectives:**

- Critically assess personal experiences to inform and guide future teaching and collaborative practices.
- Demonstrate professional behavior and preparation for the field of early childhood education.
- Demonstrate a professional level of competence in written and verbal expression.

Content and Topics:

- Professional and ethical conduct
- Use State Learning Standards and Tools
- Career Ladder

**Health – Learning Experience 9:
Exploring the Impact of Families and Culture on Children’s
Development of Health Practices****Course: Child Growth and Development****Student Learning Outcomes:**

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Examine and evaluate the role of family in facilitating children’s development.
- Examine and evaluate the role of teachers and other professionals in facilitating children’s development.
- Identify and describe risk factors that impact families and child at each major developmental stage.

Content and Topics:

- Contemporary social issues that impact children’s development
- The role and influence of family and caregivers
- The role and influence cultural and societal impacts

Course: Child, Family and Community**Student Learning Outcomes:**

- Critically assess how educational, political, and socioeconomic factors directly impact the lives of children and families.

Objectives:

- Demonstrate knowledge about the child as developing within a system and influenced by numerous factors of socialization.
- Demonstrate knowledge of legal requirements and ethical responsibilities of professionals working with all children and families.

Course: Child, Family and Community – Continued

Content and Topics:

- Challenges and benefits of early childhood practices that support children and families: creating partnerships, sharing knowledge and expertise, two-way communication, sharing power and decision making, acknowledging and respecting diversity, and creating networks of support

Course: Introduction to Curriculum

Student Learning Outcomes:

- Evaluate the teachers' role in providing best and promising practices in early childhood programs.

Objectives:

- Assess and evaluate curriculum plans for affirmation and respect for cultural, linguistic, ethnic, ability, economic class and gender diversity.
- Evaluate teacher behaviors for best practices reflecting current research and the impact it has on children's learning and development.

Content and Topics:

- Developmentally, linguistically and culturally appropriate curriculum to support the development of the whole
- Role of teacher as informed, caring, thoughtful decision maker

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Assess early childhood settings, curriculum, and teaching strategies utilizing indicators of quality early childhood practice that support all children including those with diverse characteristics and their families.

Objectives:

- Define developmentally, culturally and linguistically appropriate practice.
- Identify and compare effective policies, practices, and environments in early childhood settings.
- Identify practices promoting positive classroom management, guidance, communication and problem solving skills.
- Develop strategies to maintain communication and access with English language learning families and children.

Content and Topics:

- Addressing the needs of the whole child
- The meaning of DCLAP - developmentally, culturally, linguistically appropriate practice
- The role of shared reflective practice

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Course: Health, Safety and Nutrition – Continued**Objectives:**

- Compare and contrast various methods of collaboration with teachers and families to promote health and safety in settings for children ages 0-5.
- Write appropriate early childhood curriculum on the topics of health, safety, and nutrition appropriate for families and all children.

Content and Topics:

- Planning for children's health, safety, and nutrition education
- Physical fitness

Course: Teaching in a Diverse Society**Student Learning Outcomes:**

- Analyze various aspects of children's experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.

Objectives:

- Explore and define issues of cultural identity including factors such as language, ethnicity, religion, immigration, and economic class - in relationship to children, families, and early childhood settings.

Content and Topics:

- The teacher as model: self knowledge; recognition and respect for differences; responsive behaviors; acknowledgement and struggle with bias; change agent for and with children, families and colleagues

Course: Practicum-Field Experience**Student Learning Outcomes:**

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.
- Critically assess one's own teaching experiences to guide and inform practice.

Objectives:

- Critically assess personal experiences to inform and guide future teaching and collaborative practices.
- Demonstrate professional behavior and preparation for the field of early childhood education.
- Demonstrate a professional level of competence in written and verbal expression.

Content and Topics:

- Professional and ethical conduct
- Use State Learning Standards and Tools
- Career Ladder

Health – Learning Experience 10: Identifying Family and Cultural Beliefs and Practices about Health

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze how cultural, economic, political, historical contexts affect children's development.
- Apply developmental theory to the analysis of child observations, surveys, and/or interviews using investigative research methodologies.

Objectives:

- Investigate and explain sources of developmental change and reasons for disturbances in the developmental process.
- Demonstrate knowledge of current research findings as they apply to child development.

Content and Topics:

- Investigative research methods: interviews, surveys, observation; documentation, analysis, presentation of findings. Including questions of ethics, bias, and validity of research

Course: Child, Family and Community

Student Learning Outcomes:

- Critically assess community support services and agencies that are available to community and families.

Objectives:

- Demonstrate knowledge about the child as developing within a system and influenced by numerous factors of socialization.
- Demonstrate the ability to identify and analyze risk factors and/or problems and recommend appropriate community resources.

Content and Topics:

- Identify community agencies, referral systems, procedures and availability of specialized services and support for families and children

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Demonstrate through written curriculum plans, familiarity with appropriate materials, equipment and teaching approaches that support optimum learning and development for all young children.
- Evaluate teacher behaviors for best practices reflecting current research and the impact it has on children's learning and development.

Course: Introduction to Curriculum – Continued

Content and Topics:

- Teacher reflection and self evaluation as essential to curriculum development
- Current research
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Interpret best and promising teaching and care practices as defined within the field of early care and education's history, range of delivery systems, program types and philosophies and ethical standards.

Objectives:

- Describe adaptations (programmatic, curricular and environmental strategies) needed to support children with diverse abilities and characteristics.

Content and Topics:

- Collaboration and partnerships with families, colleagues, and health care professionals – 5 principles of family centered care

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Identify and discuss common health and safety issues in early childhood settings.
- Research current health issues related to children and families.

Content and Topics:

- Conditions affecting children's health

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use and articulate current research and understanding of development and learning theories to select effective learning materials and experiences for *all* young children.

Content and Topics:

- Use State Learning Standards and Tools

Health – Learning Experience 11: Exploring Examples of the Health Foundations During Preschool Routines

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze major developmental milestones for children from conception through adolescence in the areas of physical, psychosocial, cognitive, and language development using standard research methodologies.

Objectives:

- Demonstrate objective techniques and skills when observing, interviewing, describing and evaluating behavior in children of all ages cultures and backgrounds and their caregivers.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- Observations applying theory and developmental norms to various ages

Course: Introduction to Curriculum

Student Learning Outcomes:

- Design and implement curriculum based on observation and assessment to support play and learning using developmental, inclusive and anti-bias principles in collaboration with families to support *all* children.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.
- Using current professional standards observe and document children at play and propose appropriate curriculum and possibilities for expanding children's learning in a variety of curriculum content areas.

Content and Topics:

- Play as the central modality of young children's learning
- Individual learning styles and modalities
- Observation and documentation as related to curriculum development
- Selecting activities, materials and equipment, meeting goals
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Examine the value of play as a vehicle for developing skills, knowledge, dispositions, and strengthening relationships among young children.

Course: Principles and Practices of Teaching Young Children – Continued

Objectives:

- Demonstrate awareness of developmental ages and stages.
- Describe the relationship of observation, planning, implementation, and assessment in effective programming.

Content and Topics:

- Play as a vehicle for development and learning
- The interrelationship of planning, observation, and assessment

Course: Observation and Assessment

Student Learning Outcomes:

- Critically compare the purpose, value and use of formal and informal observation and assessment strategies and ethical implications within cultural and social contexts in early childhood settings.
- Demonstrate systematic observation methods to provide data to assess the impact of the environment, interactions and curriculum on all domains of children's learning and development.

Objectives:

- Illustrate the use of observation and assessment to implement curriculum and environmental changes in support of both group and individual needs.
- Demonstrate and apply knowledge of developmental domains when dealing with difference, delays, and disorders.
- Demonstrate knowledge of the role that observation and assessment play in intervention.

Content and Topics:

- National and State standards for learning and assessment
- Observation and assessment as a tool to create appropriate environments
- Portfolio collection (e.g., photos, art, writing), which makes visible children's development and learning

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Assess strategies to maximize the mental and physical health of children and adults in programs for all young children in accordance with culturally, linguistic and developmentally sound practice.

Objectives:

- Demonstrate effective strategies for evaluating health and safety policies and procedures.
- Write appropriate early childhood curriculum on the topics of health, safety, and nutrition appropriate for families and all children.

Content and Topics:

- N/A

Course: Practicum-Field Experience

Student Learning Outcomes:

- Design, implement and evaluate curriculum activities that are based on observation and assessment of young children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Authentic assessment and documentation for all children
- Use State Learning Standards and Tools

Health – Learning Experience 12: Exploring Scripts for the Health Domain in the Early Care and Education Setting

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze the importance of the early years and the interaction between maturational processes and social/environmental factors and the effects on various areas of development.

Objectives:

- Demonstrate objective techniques and skills when observing, interviewing, describing and evaluating behavior in children of all ages cultures and backgrounds and their caregivers.
- Examine and evaluate the role of teachers and other professionals in facilitating children's development.

Content and Topics:

- The role and influence of family and caregivers
- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum

Student Learning Outcomes:

- Evaluate the teachers' role in providing best and promising practices in early childhood programs.

Objectives:

- Discuss the role of curriculum in supporting socialization, self-regulation and self-help skills for all children.
- Evaluate teacher behaviors for best practices reflecting current research and the impact it has on children's learning and development.

Course: Introduction to Curriculum – Continued**Content and Topics:**

- Role of the teacher in fostering social attitudes, values and skills
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Examine a variety of guidance and interaction strategies to increase children's social competence and promote a caring classroom community.
- Analyze the relationship between observation, planning, implementation and assessment in developing effective teaching strategies and positive learning and development.

Objectives:

- Compare and contrast principles of positive guidance and identify strategies for different ages.
- Identify practices promoting positive classroom management, guidance, communication and problem solving skills.

Content and Topics:

- Importance of relationships and interactions

Course: Observation and Assessment**Student Learning Outcomes:**

- Demonstrate systematic observation methods to provide data to assess the impact of the environment, interactions and curriculum on all domains of children's learning and development.

Objectives:

- Use observation tools to identify patterns, trends and anomalies in individuals and groups of children (e.g., DRDP-R, Ages and Stages).
- Illustrate the use of observation and assessment to implement curriculum and environmental changes in support of both group and individual needs.

Content and Topics:

- Appropriate procedures of child observation
- Utilize observation and assessment strategies that support appropriate teaching strategies for dual-language learners

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Assess strategies to maximize the mental and physical health of children and adults in programs for all young children in accordance with culturally, linguistic and developmentally sound practice.

Objectives:

- Recognize a caregiver's role and responsibility to model good health, safety and nutrition habits

Course: Health, Safety and Nutrition – Continued

Content and Topics:

- Responsibilities of teacher as role model of best health, safety and nutrition practices

Course: Practicum-Field Experience

Student Learning Outcomes:

- Evaluate the effectiveness of early childhood curriculum, classroom, teaching strategies and how teachers involve families in their children's development and learning to improve teaching practices for all children.
- Apply a variety of effective approaches, strategies and techniques supporting positive relationships with children and adults.

Objectives:

- Plan, present and evaluate a variety of developmentally, culturally and linguistically appropriate, play-based curriculum and activities.

Content and Topics:

- Application of developmentally, culturally, linguistically appropriate practices
- Positive interactions with children and adults in primary language(s)

Health – Learning Experience 13:**Exploring the Relationships of the Foundations in the Health Domain to Foundations in Other Domains****Course: Child Growth and Development**

Student Learning Outcomes:

- Differentiate characteristics of typical and atypical development at various stages.

Objectives:

- Examine ways in which developmental domains are continuous, sequential and interrelated.
- Examine and evaluate the role of play and its relationship to development at various stages.

Content and Topics:

- The role and influence of family and caregivers
- The role and influence of cultural and societal impacts
- Development (including but not limited to physical, social/emotional, cognitive, language, special needs, risk factors, and care and education at each level)
 - Infant and toddler development
 - Play-years development

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.
- Compare and contrast play-based curriculum that supports children's cognitive, language, creative, physical and social/emotional development.

Course: Introduction to Curriculum – Continued**Objectives:**

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Apply understanding of children's learning and development to design and evaluate age appropriate foundational curriculum in areas such as: language & literacy; physical/motor mastery; creativity and the arts; mathematics and science.

Content and Topics:

- Emergent curriculum, webbed curriculum, themes, project approach
- State standards, desired results, foundations, frameworks

Course: Principles and Practices of Teaching Young Children**Student Learning Outcomes:**

- Analyze the relationship between observation, planning, implementation and assessment in developing effective teaching strategies and positive learning and development.

Objectives:

- Demonstrate awareness of developmental ages and stages.
- Describe the relationship of observation, planning, implementation, and assessment in effective programming.

Content and Topics:

- The interrelationship of planning, observation, and assessment

Course: Observation and Assessment**Student Learning Outcomes:**

- Embed activities related to assessment within play-based environments, curriculum and care routines for typically and atypically developing children.

Objectives:

- Demonstrate and apply knowledge of developmental domains to interpretations of observations.

Content and Topics:

- Appropriate procedures of child observation

Course: Health, Safety and Nutrition**Student Learning Outcomes:**

- Evaluate regulations, standards, policies and procedures related to health, safety, and nutrition in support of young children, teachers and families.

Objectives:

- Demonstrate effective strategies for evaluating health and safety policies and procedures.
- Compare and contrast various methods of collaboration with teachers and families to promote health and safety in settings for children ages 0-5.

Course: Health, Safety and Nutrition – Continued

Content and Topics:

- Promote good health with families, teachers and children involved in culturally linguistically and developmentally appropriate ways
- Planning for children's health, safety, and nutrition education

Course: Practicum-Field Experience

Student Learning Outcomes:

- Integrate understandings of children's development and needs to develop and maintain healthy, safe, respectful, supportive and challenging learning environments for all children.

Objectives:

- Use knowledge and understanding of development to create healthy, respectful, supportive, and stimulating learning environments for all children; applying understanding of the multiple influences on development and learning.

Content and Topics:

- Integration across curriculum and in collaboration w/team
- Use State Learning Standards and Tools

**Health – Learning Experience 14:
Exploring English-language Development in the Health Foundations:
Critical Vocabulary**

Course: Child Growth and Development

Student Learning Outcomes:

- Analyze how cultural, economic, political, historical contexts affect children's development.

Objectives:

- Investigate and explain the process of bilingual development in children at various stages.

Content and Topics:

- Bilingual development and theories of language learning and bilingualism

Course: Child, Family and Community

Student Learning Outcomes:

- Critique strategies that support and empower families through respectful, reciprocal relationships to involve all families in their children's development and learning.

Objectives:

- Identify early childhood practices that support all children and families.
- Demonstrate ability to implement a variety of appropriate and effective communication strategies for working with diverse and special needs populations.

Content and Topics:

- The role of family: values, traditions, modes of interaction, rules, conventions, responsibilities, change, transitions, and family dynamics

Course: Child, Family and Community – Continued

Content and Topics – Continued:

- The teacher's role in researching the needs and family contexts of dual language learners, in particular

Course: Introduction to Curriculum

Student Learning Outcomes:

- Investigate and apply developmentally appropriate principles and teaching strategies to positively influence all young children's development and acquisition of knowledge and skills.

Objectives:

- Define major areas of content learning for young children and discuss activities, materials, and approaches which most effectively support that learning in an early childhood classroom accessible to all children.
- Design curriculum plans and activities to include support of home language as well as development of English as a second language.

Content and Topics:

- Impacts of language and culture on children's play and learning
- Assessing all curriculum for access and appropriate inclusion approaches
- Innovative approaches

Course: Principles and Practices of Teaching Young Children

Student Learning Outcomes:

- Assess early childhood settings, curriculum, and teaching strategies utilizing indicators of quality early childhood practice that support all children including those with diverse characteristics and their families.

Objectives:

- Define developmentally, culturally and linguistically appropriate practice.
- Describe adaptations (programmatic, curricular and environmental strategies) needed to support children with diverse abilities and characteristics.
- Develop strategies to maintain communication and access with English language learning families and children.

Content and Topics:

- The meaning of DCLAP - developmentally, culturally, linguistically appropriate practice

Course: Observation and Assessment

Student Learning Outcomes:

- Describe and evaluate the characteristics, strengths and limitations of common assessment tools with all children's developmental, cultural and linguistic characteristics.

Objectives:

- Consider the effect of social context, child's state of health and well-being, primary language, ability and environment on assessment processes.

Course: Observation and Assessment – Continued

Content and Topics:

- National and State standards for learning and assessment

Course: Health, Safety and Nutrition

Student Learning Outcomes:

- Assess strategies to maximize the mental and physical health of children and adults in programs for all young children in accordance with culturally, linguistic and developmentally sound practice.

Objectives:

- Compare and contrast various methods of collaboration with teachers and families to promote health and safety in settings for children ages 0-5.
- Identify and discuss common health and safety issues in early childhood settings.

Content and Topics:

- Promote good health with families, teachers and children involved in culturally linguistically and developmentally appropriate ways

Course: Teaching in a Diverse Society

Student Learning Outcomes:

- Critically assess the components of linguistically and culturally relevant, inclusive, age-appropriate, anti-bias approaches in promoting optimum learning and development.

Objectives:

- Plan classroom environments, materials and approaches to effectively promote pride in one's own identity and delight and respect for social diversity.
- Evaluate inclusive classroom environments, materials and approaches that are developmentally, culturally and linguistically appropriate to specific groups of children.

Content and Topics:

- Culturally and developmentally appropriate classrooms: curriculum, environment; human relationships

Course: Practicum-Field Experience

Student Learning Outcomes:

- Evaluate the effectiveness of early childhood curriculum, classroom, teaching strategies and how teachers involve families in their children's development and learning to improve teaching practices for all children.
- Apply a variety of effective approaches, strategies and techniques supporting positive relationships with children and adults.

Objectives:

- Plan, present and evaluate a variety of developmentally, culturally and linguistically appropriate, play-based curriculum and activities.

Content and Topics:

- Application of developmentally, culturally, linguistically appropriate practices
- Positive interactions with children and adults in primary language(s)

Appendix B

The Foundations

Visual and Performing Arts

Visual Art

1.0 Notice, Respond, and Engage

| At around 48 months of age | At around 60 months of age |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.1 Notice and communicate about objects or forms that appear in art. | 1.1 Communicate about elements appearing in art (such as line, texture, or perspective), and describe how objects are positioned in the artwork. |
| 1.2 Create marks with crayons, paints, and chalk and then identify them; mold and build with dough and clay and then identify them. | 1.2 Begin to plan art and show increasing care and persistence in completing it. |
| 1.3 Enjoy and engage with displays of visual art, inside or outside the classroom. Begin to express preferences for some art activities or materials. | 1.3 Enjoy and engage with displays of visual art. May expand critical assessment of visual art to include preferences for types of artwork or art activities. |
| 1.4 Choose own art for display in the classroom or for inclusion in a portfolio or book and briefly explain choice. | 1.4 Choose own art for display in the classroom or for inclusion in a portfolio or book and explain her or his ideas in some detail. |

2.0 Develop Skills in Visual Art

| | |
|--------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| 2.1 Make straight and curved marks and lines; begin to draw rough circle shapes. | 2.1 Draw single circle and add lines to create representations of people and things. |
| 2.2 Begin to create paintings or drawings that suggest people, animals, and objects. | 2.2 Begin to create representative paintings or drawings that approximate or depict people, animals, and objects. |

Faculty Initiative Project Instructional Guide for the *California Preschool Learning Foundations, Volume 2*
 Appendix B – Summary of the Foundations for the *California Preschool Learning Foundations, Volume 2*
 CDE/Child Development Division and WestEd Center for Child and Family Studies
 May be duplicated for educational purposes only.

2.0 Develop Skills in Visual Art (Continued)

| At around 48 months of age | At around 60 months of age |
|---------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| 2.3 Make somewhat regular-shaped balls and coils out of dough or clay. | 2.3 Make more representational forms out of dough or clay, using tools (for example, a rolling pin or a garlic press). |
| 2.4 Begin to use paper and other materials to assemble simple collages. | 2.4 Use paper and other materials to make two- and three-dimensional assembled works. |
| 2.5 Begin to recognize and name materials and tools used for visual arts. | 2.5 Recognize and name materials and tools used for visual arts. |
| 2.6 Demonstrate some motor control when working with visual arts tools. | 2.6 Demonstrate increasing coordination and motor control when working with visual arts tools. |

3.0 Create, Invent, and Express Through Visual Art

| | |
|-----------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| 3.1 Create art and sometimes name the work. | 3.1 Intentionally create content in a work of art. |
| 3.2 Begin to draw figures or objects. | 3.2 Draw more detailed figures or objects with more control of line and shape. |
| 3.3 Begin to use intensity of marks and color to express a feeling or mood. | 3.3 Use intensity of marks and color more frequently to express a feeling or mood. |

Copyright © 2010 California Department of Education, Child Development Division

Music

1.0 Notice, Respond, and Engage

| At around 48 months of age | At around 60 months of age |
|--------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| 1.1 Sustain attention and begin to reflect verbally about music; demonstrate familiarity with words that describe music. | 1.1 Verbally reflect on music and describe music by using an expanded vocabulary. |
| 1.2 Recognize simple repeating melody and rhythm patterns. | 1.2 Demonstrate more complex repeating melody and rhythm patterns. |
| 1.3 Identify the sources of a limited variety of musical sounds. | 1.3 Identify the sources of a wider variety of music and music-like sounds. |
| 1.4 Use body movement freely to respond loosely to beat—loud versus quiet (dynamics)—and tempo. | 1.4 Use body movement freely and more accurately to respond to beat, dynamics, and tempo of music. |

2.0 Develops Skills in Music

| | |
|-------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| 2.1 Begin to discriminate between different voices and certain instrumental and environmental sounds. Follow words in a song. | 2.1 Become more able to discriminate between different voices and various instrumental and environmental sounds. Follow words in a song. |
| 2.2 Explore vocally; sing repetitive patterns and parts of songs alone and with others. | 2.2 Extend vocal exploration; sing repetitive patterns and entire songs alone and with others in wider ranges of pitch. |

3.0 Create, Invent, and Express Through Music

| | |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| 3.1 Explore vocal and instrumental skills and use instruments to produce simple rhythms and tones. | 3.1 Continue to apply vocal and instrumental skills and use instruments to produce more complex rhythms, tones, melodies, and songs. |
| 3.2 Move or use body to demonstrate beat and tempo, often spontaneously. | 3.2 Move or use body to demonstrate beat, tempo, and style of music, often intentionally. |
| 3.3 Improvise vocally and instrumentally. | 3.3 Explore, improvise, and create brief melodies with voice or instrument. |

Copyright © 2010 California Department of Education, Child Development Division

Drama

1.0 Notice, Respond, and Engage

| At around 48 months of age | At around 60 months of age |
|---------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| 1.1 Demonstrate an understanding of simple drama vocabulary. | 1.1 Demonstrate a broader understanding of drama vocabulary. |
| 1.2 Identify preferences and interests related to participating in drama. | 1.2 Explain preferences and interests related to participating in drama. |
| 1.3 Demonstrate knowledge of simple plot of a participatory drama. | 1.3 Demonstrate knowledge of extended plot and conflict of a participatory drama. |

2.0 Develop Skills to Create, Invent, and Express Through Drama

| | |
|------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.1 Demonstrate basic role-play skills with imagination and creativity. | 2.1 Demonstrate extended role-play skills with increased imagination and creativity. |
| 2.2 Add props and costumes to enhance dramatization of familiar stories and fantasy play with peers. | 2.2 Create and use an increasing variety of props, costumes and scenery to enhance dramatization of familiar stories and fantasy play with peers. |

Dance

1.0 Notice, Respond, and Engage

| | |
|--------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.1 Engage in dance movements. | 1.1 Further engage and participate in dance movements. |
| 1.2 Begin to understand and use vocabulary related to dance. | 1.2 Connect dance terminology with demonstrated steps. |
| 1.3 Respond to instruction of one skill at a time during movement, such as a jump or fall. | 1.3 Respond to instruction of more than one skill at a time in movement, such as turning, leaping, and turning again. Often initiate a sequence of skills. |
| 1.4 Explore and use different steps and movements to create or form a dance. | 1.4 Use understanding of different steps and movements to create or form a dance. |

2.0 Develop Skills in Dance

| At around 48 months of age | At around 60 months of age |
|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 2.1 Begin to be aware of own body in space. | 2.1 Continue to develop awareness of body in space. |
| 2.2 Begin to be aware of other people in dance or when moving in space. | 2.2 Show advanced awareness and coordination of movement with other people in dance or when moving in space. |
| 2.3 Begin to respond to tempo and timing through movement. | 2.3 Demonstrate some advanced skills in responding to tempo and timing through movement. |

3.0 Create, Invent, and Express Through Dance

| | |
|------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| 3.1 Begin to act out and dramatize through music and movement patterns. | 3.1 Extend understanding and skills for acting out and dramatizing through music and movement patterns. |
| 3.2 Invent dance movements. | 3.2 Invent and recreate dance movements. |
| 3.3 Improvise simple dances that have a beginning and an end. | 3.3 Improvise more complex dances that have a beginning, middle, and an end. |
| 3.4 Communicate feelings spontaneously through dance and begin to express simple feelings intentionally through dance when prompted by adults. | 3.4 Communicate and express feelings intentionally through dance. |

Copyright © 2010 California Department of Education, Child Development Division

Physical Development

Fundamental Movement Skills

1.0 Balance

| At around 48 months of age | At around 60 months of age |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| 1.1 Maintain balance while holding still; sometimes may need assistance. | 1.1 Show increasing balance and control when holding still. |
| 1.2 Maintain balance while in motion when moving from one position to another or when changing directions, though balance may not be completely stable. | 1.2 Show increasing balance control while moving in different directions and when transitioning from one movement or position to another. |

2.0 Locomotor Skills

| | |
|--------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.1 Walk with balance, not always stable, oppositional arm movements still developing, and relatively wide base of support (space between feet). | 2.1 Walk with balance, oppositional arm movements, and relatively narrow base of support (space between feet). |
| 2.2 Run with short stride length and feet off the ground for a short period of time. May show inconsistent opposition of arms and legs. | 2.2 Run with a longer stride length and each foot off the ground for a greater length of time. Opposition of arms and legs is more consistent. |
| 2.3 Jump for height (up or down) and for distance with beginning competence. | 2.3 Jump for height (up or down) and for distance with increasing competence. Uses arm swing to aid forward jump. |
| 2.4 Begin to demonstrate a variety of locomotor skills, such as galloping, sliding, hopping, and leaping. | 2.4 Demonstrate increasing ability and body coordination in a variety of locomotor skills, such as galloping, sliding, hopping, and leaping. |

Copyright © 2010 California Department of Education, Child Development Division

3.0 Manipulative Skills

| At around 48 months of age | At around 60 months of age |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.1 Begin to show gross motor manipulative skills by using arms, hands, and feet, such as rolling a ball underhand, tossing underhand, bouncing, catching, striking, throwing overhand, and kicking. | 3.1 Show gross motor manipulative skills by using arms, hands, and feet with increased coordination, such as rolling a ball underhand, tossing underhand, bouncing, catching, striking, throwing overhand, and kicking. |
| 3.2 Begin to show fine motor manipulative skills using hands and arms such as in-hand manipulation, writing, cutting, and dressing. | 3.2 Show increasing fine motor manipulative skills using hands and arms such as in-hand manipulation, writing, cutting, and dressing. |

Perceptual-Motor Skills and Movement Concepts

1.0 Body Awareness

| At around 48 months of age | At around 60 months of age |
|-------------------------------------------------------|------------------------------------------------------------------|
| 1.1 Demonstrate knowledge of the names of body parts. | 1.1 Demonstrate knowledge of an increasing number of body parts. |

2.0 Spatial Awareness

| | |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 2.1 Use own body as reference point when locating or relating to other people or objects in space. | 2.1 Use own body, general space, and other people's space when locating or relating to other people or objects in space. |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|

3.0 Directional Awareness

| | |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 3.1 Distinguish movements that are up and down and to the side of the body (for example, understands "use that side, now the other side"). | 3.1 Begin to understand and distinguish between the sides of the body. |
| 3.2 Move forward and backward or up and down easily. | 3.2 Can change directions quickly and accurately. |

Copyright © 2010 California Department of Education, Child Development Division

3.0 Directional Awareness (Continued)

| At around 48 months of age | At around 60 months of age |
|--------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| 3.3 Can place an object on top of or under something with some accuracy. | 3.3 Can place an object or own body in front of, to the side, or behind something else with greater accuracy. |
| 3.4 Use any two body parts together. | 3.4 Demonstrate more precision and efficiency during two-handed fine motor activities. |

Active Physical Play**1.0 Active Participation**

| At around 48 months of age | At around 60 months of age |
|----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| 1.1 Initiate or engage in simple physical activities for a short to moderate period of time. | 1.1 Initiate more complex physical activities for a sustained period of time. |

2.0 Cardiovascular Endurance

| | |
|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 2.1 Engage in frequent bursts of active play that involves the heart, the lungs, and the vascular system. | 2.1 Engage in sustained active play of increasing intensity that involves the heart, the lungs, and the vascular system. |
|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|

3.0 Muscular Strength, Muscular Endurance, and Flexibility

| | |
|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 3.1 Engage in active play activities that enhance leg and arm strength, muscular endurance, and flexibility. | 3.1 Engage in increasing amounts of active play activities that enhance leg and arm strength, muscular endurance, and flexibility. |
|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|

Copyright © 2010 California Department of Education, Child Development Division

Health

Health Habits

1.0 Basic Hygiene

| At around 48 months of age | At around 60 months of age |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.1 Demonstrate knowledge of some steps in the handwashing routine. | 1.1 Demonstrate knowledge of more steps in the handwashing routine. |
| 1.2 Practice health habits that prevent infectious diseases and infestations (such as lice) when appropriate, with adult support, instruction, and modeling. | 1.2 Begin to independently practice health habits that prevent infectious disease and infestations (such as lice) when appropriate, with less adult support, instruction, and modeling. |

2.0 Oral Health

| | |
|--------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| 2.1 Demonstrate knowledge of some steps of the routine for brushing teeth, with adult supervision and instruction. | 2.1 Demonstrate knowledge of more steps of the routine for brushing and when toothbrushing should be done, with less adult supervision. |
|--------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|

3.0 Knowledge of Wellness

| | |
|------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.1 Identify a few internal body parts (most commonly the bones, brain, and heart) but may not understand their basic function. | 3.1 Identify several different internal body parts and demonstrate a basic, limited knowledge of some functions. |
| 3.2 Begin to understand that health-care providers try to keep people well and help them when they are not well. | 3.2 Demonstrate greater understanding that health-care providers try to keep people well and help them when they are not well. |
| 3.3 Communicate to an adult about not feeling well, feeling uncomfortable, or about a special health need, with varying specificity and reliability. | 3.3 Communicate to an adult about not feeling well, feeling uncomfortable, or about a special health need, with more specificity and reliability. |

4.0 Sun Safety

| | |
|--------------------------------------------------------------------------|---------------------------------------------------------------------------|
| 4.1 Begin to practice sun-safe actions, with adult support and guidance. | 4.1 Practice sun-safe actions with decreasing adult support and guidance. |
|--------------------------------------------------------------------------|---------------------------------------------------------------------------|

Safety

1.0 Injury Prevention

| <i>At around 48 months of age</i> | <i>At around 60 months of age</i> |
|----------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 1.1 Follow safety rules with adult support and prompting. | 1.1 Follow safety rules more independently though may still need adult support and prompting. |
| 1.2 Begin to show ability to follow emergency routines after instruction and practice (for example, a fire drill or earthquake drill). | 1.2 Demonstrate increased ability to follow emergency routines after instruction and practice. |
| 1.3 Show beginning ability to follow transportation and pedestrian safety rules with adult instruction and supervision. | 1.3 Show increased ability to follow transportation and pedestrian safety rules with adult support and supervision. |

Nutrition

1.0 Nutrition Knowledge

| <i>At around 48 months of age</i> | <i>At around 60 months of age</i> |
|----------------------------------------|--------------------------------------------------------------------------------------|
| 1.1 Identify different kinds of foods. | 1.1 Identify a larger variety of foods and may know some of the related food groups. |

2.0 Nutrition Choices

| | |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.1 Demonstrate a beginning understanding that eating a variety of food helps the body grow and be healthy, and choose from a variety of foods at mealtimes. | 2.1 Demonstrate greater understanding that eating a variety of food helps the body grow and be healthy, and choose from a greater variety of foods at mealtimes. |
| 2.2 Indicate food preferences that reflect familial and cultural practices. | 2.2 Indicate food preferences based on familial and cultural practices and on some knowledge of healthy choices. |

3.0 Self-Regulation of Eating

| | |
|----------------------------------------------------|------------------------------------------------------------|
| 3.1 Indicate awareness of own hunger and fullness. | 3.1 Indicate greater awareness of own hunger and fullness. |
|----------------------------------------------------|------------------------------------------------------------|

Physical Development

Physical Development: Learning Experience 1

<http://www.wested.org/facultyinitiative> 1

Handout: Connecting to the Physical Development Foundations By Experiencing Them

Try some or all of the following skills. Do this only with a partner to assist and take turns. Try only what you want to do or know you can do safely. As you do the skills, discuss the experience with your partner. Note what was easy or challenging or any other reflections about your experience.

| Skill | Notes: Was it easy or were there challenges? Other? |
|----------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| Strand: Fundamental Movement Skills | |
| Substrand: <i>Balance</i> Stand on one foot for five seconds (holding your partner's hand for support as needed). | |
| Put a five-foot length of tape on the floor for and walk on it (holding your partner's hand for support as needed). | |
| Substrand: <i>Locomotor Skills</i> | |
| Walk and stop when your partner says "stop" and go when your partner says "go." Repeat several times. | |
| Put a book on the floor and do a two-footed jump (holding your partner's hand for support as needed.) | |

Physical Development: Learning Experience 1

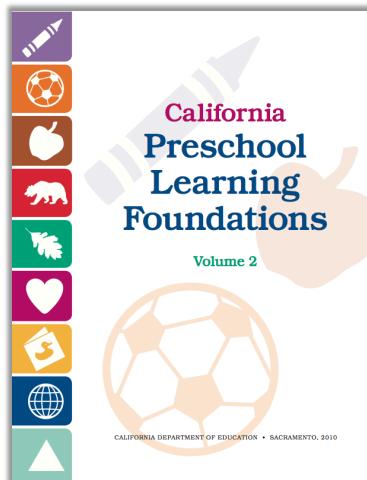

<http://www.wested.org/facultyinitiative> 2

Physical Development

- What was your overall impression of this experience?
- What things were hardest? Easiest?
- Were there any surprises?
- What did you learn about your relationship to these foundations?
- What does this experience suggest about our work with young children relating to the domain of physical development?

Physical Development

Physical Development: Learning Experience 2

<http://www.wested.org/facultyinitiative> |

Physical Development

- Was it hard to remember your early experiences in natural settings or to think of places you would like to visit or places that are important to you?
- How did it feel when you remembered them?
- What kind of feelings did these places bring up?

Physical Development: Learning Experience 2

<http://www.wested.org/facultyinitiative> 2

Physical Development

- Did you think of these experiences or places with happiness? Fear? Excitement? Contentment? Wonder?
- Did they bring up memories or ideas about other people?
- What does this suggest about the importance of exposing children to natural areas when working with young children?

Physical Development: Learning Experience 2

<http://www.wested.org/facultyinitiative> 3

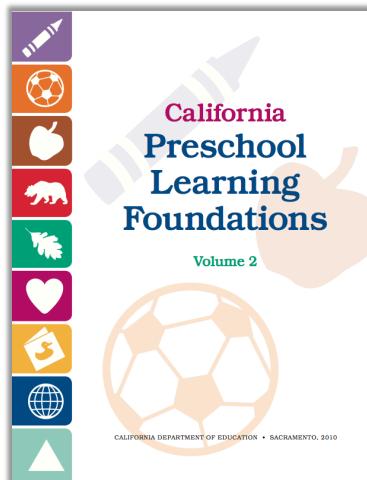

Physical Development

- What new insights did you gain in this experience?
- What really stood out for you in this experience?
- Did this experience suggest anything you want to do in relation to your experiences with natural settings or the experiences of children in your work?

Physical Development: Learning Experience 2

<http://www.wested.org/facultyinitiative> 4

Physical Development

Physical Development: Learning Experience 3

<http://www.wested.org/facultyinitiative> |

Physical Development

Fundamental Movement Skills (Strand)

- 1.0 Balance (Substrand)
- 2.0 Locomotor Skills (Substrand)
- 3.0 Manipulative Skills (Substrand)

Physical Development: Learning Experience 3

<http://www.wested.org/facultyinitiative> 2

Physical Development

Perceptual-Motor Skills and Movement Concepts (Strand)

- 1.0 Body Awareness (Substrand)
- 2.0 Spatial Awareness (Substrand)
- 3.0 Directional Awareness (Substrand)

Physical Development: Learning Experience 3

<http://www.wested.org/facultyinitiative> 3

Physical Development

Active Physical Play (Strand)

- 1.0 Active Participation (Substrand)
- 2.0 Cardiovascular Endurance (Substrand)
- 3.0 Muscular Strength, Muscular Endurance, and Flexibility (Substrand)

Physical Development: Learning Experience 3

<http://www.wested.org/facultyinitiative> 4

Physical Development Domain Puzzle

| Fundamental Movement Skills | |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| At around 48 months of age | At around 60 months of age |
| <i>Balance</i> | |
| Maintain balance while holding still; sometimes may need assistance. | Show increasing balance and control when holding still. |
| Maintain balance while in motion when moving from one position to another or when changing directions, though balance may not be completely stable. | Show increasing balance control while moving in different directions and when transitioning from one movement or position to another. |

Physical Development: Learning Experience 3

<http://www.wested.org/facultyinitiative> 5

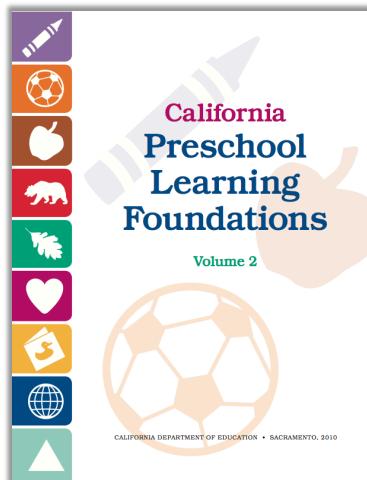

Physical Development

- As you look at the completed puzzles, what stands out to you?
- Were some strands and substrands easier to put together than others? Which ones and why?
- Which strand and substrands were most challenging? Why?
- What are some examples you have seen of these foundations?
- Which substrand do you want to know more about? How could you discover more about that substrand?

Physical Development: Learning Experience 3

<http://www.wested.org/facultyinitiative> 6

Physical Development

Physical Development: Learning Experience 4

<http://www.wested.org/facultyinitiative> |

Physical Development

- What stands out for you from playing “Physical Development Charades”?
- Which foundations were easiest to demonstrate? Which were most difficult?
- Why do you think it’s important for teachers to recognize how children are demonstrating these skills and concepts?
- What will you take from this learning experience to your work with young children?

Physical Development: Learning Experience 4

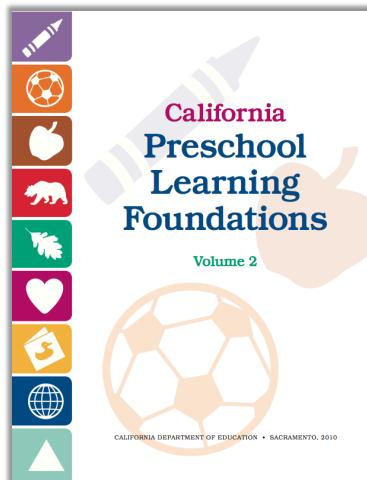

<http://www.wested.org/facultyinitiative> 2

Physical Development

- Review the introductory sections, examples and footnotes in the foundations and the bibliographic notes for discussion of physical development and children with disabilities.
- Identify 5 ways that children with disabilities could demonstrate acquisition of a skill or concept described in the physical development foundations.
- List the kind of disability the child might have and the strategy, including any modifications or supports needed.

Physical Development

Physical Development: Learning Experience 5

<http://www.wested.org/facultyinitiative> 1

Physical Development

Fundamental Movement Skills (Strand)

- 1.0 Balance (Substrand)
- 2.0 Locomotor Skills (Substrand)
- 3.0 Manipulative Skills (Substrand)

Physical Development: Learning Experience 5

<http://www.wested.org/facultyinitiative> 2

Physical Development

Perceptual-Motor Skills and Movement Concepts (Strand)

- 1.0 Body Awareness (Substrand)
- 2.0 Spatial Awareness (Substrand)
- 3.0 Directional Awareness (Substrand)

Physical Development: Learning Experience 5

<http://www.wested.org/facultyinitiative> 3

Physical Development

Active Physical Play (Strand)

- 1.0 Active Participation (Substrand)
- 2.0 Cardiovascular Endurance (Substrand)
- 3.0 Muscular Strength, Muscular Endurance, and Flexibility (Substrand)

Physical Development: Learning Experience 5

<http://www.wested.org/facultyinitiative> 4

| Vocabulary of the Physical Development Domain | | |
|-----------------------------------------------|------|------------|
| Fundamental Movement Skills | | |
| Substrand | Word | Definition |
| Balance | | |
| Locomotor Skills | | |
| Manipulative Skills | | |
| Perceptual-Motor Skills and Movement Concepts | | |
| Substrand | Word | Definition |
| Body Awareness | | |
| Spatial Awareness | | |

|  | Physical Development |
|-------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <ul style="list-style-type: none"> • What stands out for you from these scenarios? • Which terms were easy to define? Which ones were more difficult? • Why do you think it's important to share this terminology with parents? • What are ways you might share this information with parents? |

Physical Development

- Which words were new or unfamiliar to you? Which words had a definition that was different from how you define or use them?
- Which terms describe behaviors that will be easy for you to observe in children?
- Which ones will be more difficult to observe?

Physical Development: Learning Experience 5

<http://www.wested.org/facultyinitiative> 7

Physical Development

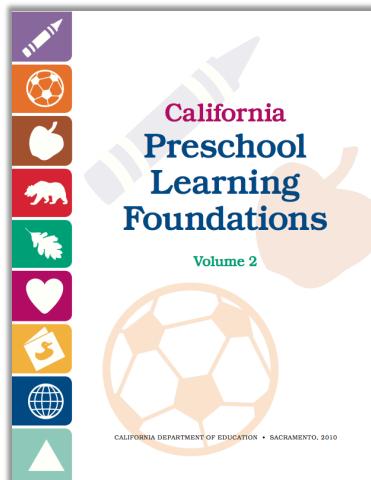

- Why do you think it's important for teachers to understand this physical development vocabulary?
- How can you become more familiar with words that were new to you in your work with children?

Physical Development: Learning Experience 5

<http://www.wested.org/facultyinitiative> 8

Physical Development

Physical Development: Learning Experience 6

<http://www.wested.org/facultyinitiative> |

Physical Development

Identify key points related to:

- Sequential development of fundamental movement skills
- Importance of movement and physical play and activity
- Relationship of physical activity and health
- Relationship of physical activity and academic performance
- Importance of adult instruction in children's development of physical skills
- Relationship of children's physical play and social-emotional development
- Physical development and children with disabilities

Physical Development: Learning Experience 6

<http://www.wested.org/facultyinitiative> 2

Physical Development

Select one research study related to:

- Sequential development of fundamental movement skills
- Importance of movement and physical play and activity
- Relationship of physical activity and health
- Relationship of physical activity and academic performance
- Importance of adult instruction in children's development of physical skills
- Relationship of children's physical play and social-emotional development
- Physical development and children with disabilities

Physical Development: Learning Experience 6

<http://www.wested.org/facultyinitiative> 3

Physical Development

- Listing and overview of the research articles
- Summary of the findings
- Discussion of how the findings relate to specific foundations

Physical Development: Learning Experience 6

<http://www.wested.org/facultyinitiative> 4

Physical Development

- What key finding from the research really caught your attention?
- What were some new insights you gained?
- Which studies or findings did you find most relevant to your understanding of the foundations?

Physical Development

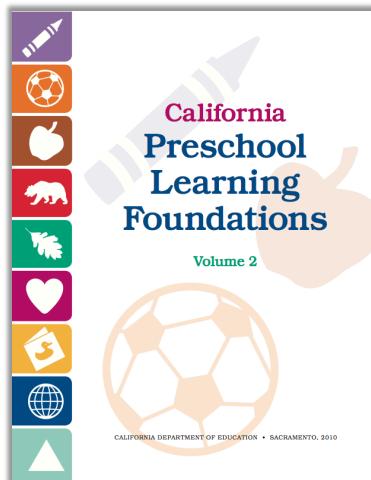

- How did a finding challenge or affirm your beliefs?
- What question(s) did the research raise for you?
- What is a next step you will do in answering this question?

Physical Development

- Overview of the research
- Summary of findings, key points, and recommendations from the studies
- How the research relates to particular foundations
- Possible implications for practice—ways that preschool teachers can support children's acquisition of the knowledge and skills described in the physical development foundations

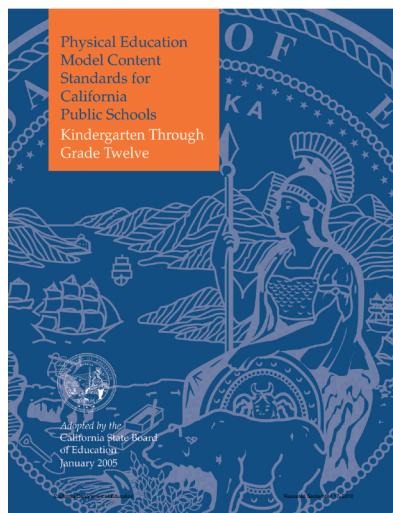

Physical Development

Physical Development: Learning Experience 7

<http://www.wested.org/facultyinitiative> |

Physical Development

Physical Development: Learning Experience 7

<http://www.wested.org/facultyinitiative> 2

Physical Development

- I. Students demonstrate the motor skills and movement patterns needed to perform a variety of physical activities.
 - Movement Concepts
 - Body Management
 - Locomotor Movement
 - Manipulative Skills
 - Rhythmic Skills

Physical Development

2. Students demonstrate knowledge of movement concepts, principles, and strategies that apply to the learning and performance of physical activities.
 - Movement Concepts
 - Body Management
 - Locomotor Movement
 - Manipulative Skills

Physical Development

3. Students assess and maintain a level of physical fitness to improve health and performance.
 - Fitness Concepts
 - Aerobic Capacity
 - Muscular Strength/Endurance
 - Flexibility
 - Body Composition
 - Assessment

Physical Development

4. Students demonstrate knowledge of physical fitness concepts, principles, and strategies to improve health and performance.
 - Fitness Concepts
 - Aerobic Capacity
 - Muscular Strength/Endurance
 - Flexibility
 - Body Composition

Physical Development

5. Students demonstrate and utilize knowledge of psychological and sociological concepts, principles, and strategies that apply to the learning and performance of physical activity.

- Self-Responsibility
- Social Interaction
- Group Dynamics

| Kindergarten Content Standard ↓ | Strand/Substrand | | | | | | | | |
|--------------------------------------------------------------------------------------------------------------------|-----------------------------|------------------|---------------------|-----------------------------------------------|-------------------|-----------------------|----------------------|--------------------------|--------------------------------------------------------|
| | Fundamental Movement Skills | | | Perceptual-Motor Skills and Movement Concepts | | | Active Physical Play | | |
| | Balance | Locomotor skills | Manipulative skills | Body Awareness | Spatial Awareness | Directional Awareness | Active Participation | Cardiovascular Endurance | Muscular Strength, Muscular Endurance, and Flexibility |
| 1. Students demonstrate the motor skills and movement patterns needed to perform a variety of physical activities. | Movement Concepts | | | | | | | | |
| | Body Management | | | | | | | | |
| | Locomotor Movement | | | | | | | | |
| | Manipulative Skills | | | | | | | | |
| | Rhythmic Skills | | | | | | | | |

Physical Development

- What are the purposes of the preschool learning foundations and the kindergarten content standards?
- Where do you see similarities and differences between the physical development foundations and the physical education model content standards for kindergarten?
- What might be some reasons for these similarities and differences?

Physical Development

- Why is it important for preschool teachers to be aware of the kindergarten content standards?
- What are some general ways that preschool teachers and kindergarten teachers can use the preschool physical development foundations and the kindergarten physical education model content standards in their classroom practices?

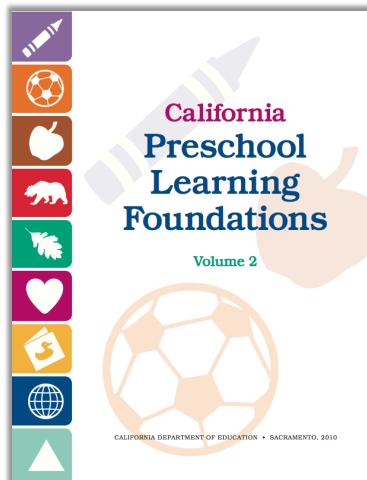

Physical Development

National Association for Sport and Physical Education (NASPE)

- Position statements on best practice, including:
 - ✓ Physical Education is Critical to Educating the Whole Child
 - ✓ Looking at Physical Education from a Developmental Perspective: A Guide to Teaching
 - ✓ Comprehensive School Physical Activity Programs

Physical Development

Physical Development: Learning Experience 8

<http://www.wested.org/facultyinitiative> |

Physical Development

Support for physical development

- Parents value physical activity.
- Parents enjoy, engage in, and model physical activity.
- Parents take children to parks/playgrounds where they can engage in physical play and try out new skills and equipment.
- Parents have the financial resources to take children to sporting events.

Physical Development: Learning Experience 8

<http://www.wested.org/facultyinitiative> 2

Physical Development

Support for physical development

- There are safe areas for children to play outside every day.
- Family events include physical activities.
- The family's culture includes activities that involve physical skill and activity.
- Parents provide simple age-appropriate equipment for children to use.

Physical Development

Barriers for physical development

- Parents do not prioritize physical activity.
- Children do not see family members and friends engaging in physical activities.
- Parents/caregivers do not take children to places where they can engage in physical play.
- Safe outdoor play areas are not easily accessible to families.
- Children are encouraged to do more sedentary activities.

Physical Development

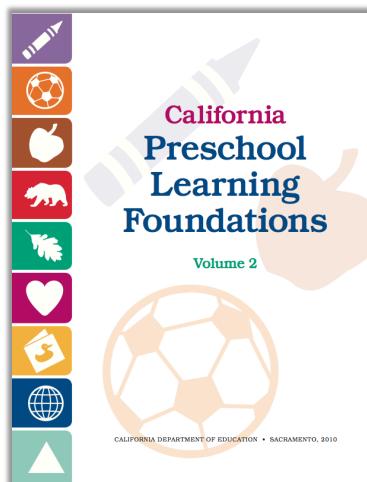

Barriers for physical development

- Children have few opportunities to play outside every day because of school, child care, and/or transportation schedules.
- Children have limited access to age-appropriate equipment such as balls, swings, climbing equipment, or riding toys.
- Taking children to sporting events is expensive.
- The costs associated with children participating in physical activities or taking sports or dance lessons are prohibitive.

Physical Development

- What activities on the list surprised you?
- Which activities would be easiest for children and families in your community to do? Which ones are more difficult?
- Why is it important to consider family and community beliefs, values, practices, and circumstances when thinking about children's physical development and activity?
- What key message from this learning experience will you remember when using the physical development foundations in your teaching?

Physical Development

Physical Development: Learning Experience 9

<http://www.wested.org/facultyinitiative> |

Physical Development

- What in the pamphlet stands out to you?
- What do you like about the pamphlet?
- What key messages are you taking away from the pamphlet?
- What parts of the pamphlet are not as clear?
- What are some recommendations for improving the pamphlet?

Physical Development: Learning Experience 9

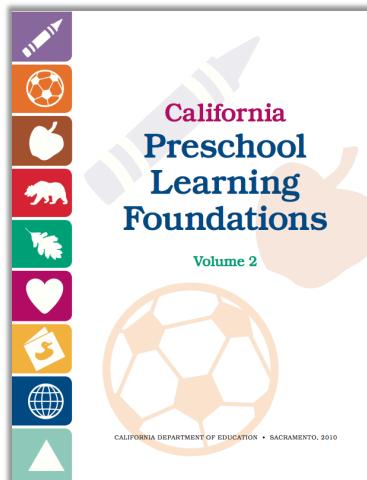

<http://www.wested.org/facultyinitiative> 2

Physical Development

- What words or images do you remember from the pamphlets?
- Where did you see examples of linguistic, cultural, and economic considerations in the pamphlets?
- What did you learn about discussing young children's physical development and activity with parents?
- What would you do differently?

Physical Development

Physical Development: Learning Experience 10

<http://www.wested.org/facultyinitiative> 1

Physical Development

- Is there anything you particularly noticed about all the examples?
- Were there some areas or activities in the classroom where it was difficult to see these foundations in action?
- Were there some areas where it was easy?

Physical Development: Learning Experience 10

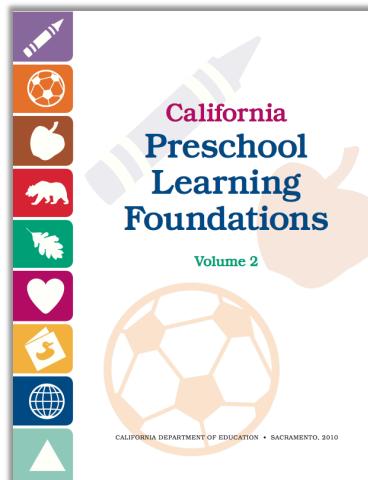

<http://www.wested.org/facultyinitiative> 2

Physical Development

- Were some strands easier to see than others? Which ones? Why?
- What does this tell you about the importance of ongoing observation in early care and education settings?
- What are the implications of this for your current or future work with young children?

Physical Development

Physical Development: Learning Experience 11

<http://www.wested.org/facultyinitiative> 1

Physical Development

Interest areas

- Dramatic play area
- Block area
- Art area
- Book area
- Writing area
- Math area
- Science area

Physical Development: Learning Experience 11

<http://www.wested.org/facultyinitiative> 2

Physical Development

- What are your general impressions?
- Are you surprised by anything?
- Where are there many images and where are there fewer?
- Which foundations are represented the most? Which the least?

Physical Development

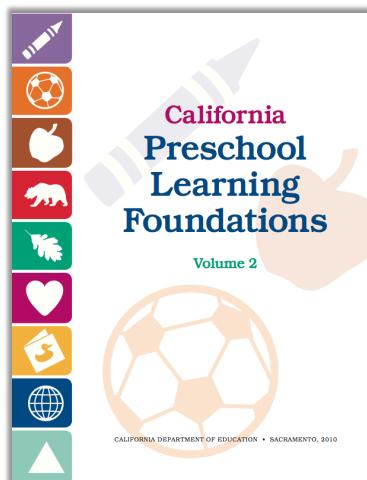

- Of those represented the least, in what other areas or times in the curriculum could you expect to find them?
- What does this suggest about your observation of the foundations in the physical development domain in your current or future work?

Physical Development

- What stood out for you in this experience?
- What insights did you gain?
- Are there ways in which this will influence your work with young children now or in the future?

Physical Development

Physical Development: Learning Experience 12

Looking for Relationships Across Domains: Physical Development and Visual and Performing Arts

Which skills (foundations) in the visual and performing arts would support or be required for development of skills in the physical development domain?

| | | | | |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical Development Strands ↓ | Visual Art <ul style="list-style-type: none">• Notice, Respond, and Engage• Develop Skills in Visual Art• Create, Invent, and Express Through Visual Art | Music <ul style="list-style-type: none">• Notice, Respond, and Engage• Develop Skills in Music• Create, Invent, and Express Through Music | Drama <ul style="list-style-type: none">• Notice, Respond, and Engage• Develop Skills to Create, Invent, and Express Through Drama | Dance <ul style="list-style-type: none">• Notice, Respond, and Engage• Develop Skills in Dance• Create, Invent, and Express Through Dance |
| Fundamental Movement Skills | | | | |

Physical Development: Learning Experience 12

<http://www.wested.org/facultyinitiative> 2

Physical Development

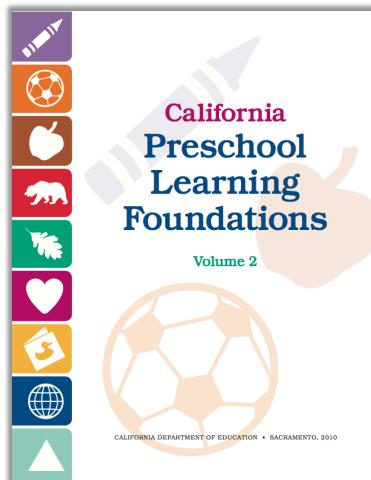

- Where was it easy? Were there some that seemed almost the same? Where did you find strong relationships?
- Where was it hard to see relationships? Are there some that just are not connected? What does this suggest?

Physical Development

- What stood out for you today?
- Where were there challenges for you?
- Is there further information you need to strengthen your understanding of these relationships?
- If so, how can you find that information?

Physical Development

Physical Development: Learning Experience 13

<http://www.wested.org/facultyinitiative> 1

Physical Development

English-language development domain

Beginning Level: Children are listening and actively processing the features of the English language.

Middle Level: Children will repeat phrases that are functionally effective, increase vocabulary, and begin to combine words.

Later Level: Children will have stronger comprehension, use English to learn, use appropriate English grammar, and engage in most classroom activities in English.

Physical Development: Learning Experience 13

<http://www.wested.org/facultyinitiative> 2

**Developing Vocabulary in the Fundamental Movement Skills Strand
for Children Who Are English Learners**

| | Level of English Language Development | | |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | Beginning Level: Children are listening and actively processing the features of the English language. | Middle Level: Children will repeat phrases that are functionally effective, increase vocabulary, and begin to combine words. | Later Level: Children will have stronger comprehension, use English to learn, use appropriate English grammar, and engage in most classroom activities in English. |
| Substrand: Balance | | | |
| Substrand: Locomotor skills | | | |
| Substrand: Manipulative Skills | | | |

Physical Development

- What was the most important thing that you learned in this experience?
- Did you find areas of development or concepts that you want to strengthen in your own understanding?
- How will this influence your work now or in the future with young children?
